

Some text with an inline block, containing some smaller text in an fo:inline-container with "50%" width and some more text in the original size, and some more text to trigger a linebreak

Some text with one, no...
two inline blocks containing some smaller text, in an fo:inline-container width explicit width/height (w=2in, h=5em) and some more text in the original size, and some more text to trigger a linebreak

Some text with a 3-column inline table
cell 1.1 cell 1.2 cell 1.3
cell 2.1 cell 2.2 cell 2.3 and some more text in the original size, and some more text to trigger a linebreak

Some text with
and some more text in the original size

a 3-item inline list
item 1
item 2
item 3

The following block demonstrates a 3-column layout using `fo:inline-containers`

column 1 column 2 column 3 should be upside-down

The following block tests nested inline-containers

Some text inline block Nested inline block and
some trailing text after the inline-container

Some text with

an inline block containing some smaller text
in an fo:inline-container with "50%" width,
"5em" height and display-align="before".

Some text with

an inline block containing some smaller text
in an fo:inline-container with "50%" width,
"5em" height and display-align="center".

Some text with

an inline block containing some smaller text
in an fo:inline-container with "50%" width,
"5em" height and display-align="after".

Some text with

an inline block containing some smaller text in an fo:inline-container with "50%" width, "5em" height and display-align="before", alignment-adjust="before-edge".

Some text with

an inline block containing some smaller text in an fo:inline-container with "50%" width, "5em" height and display-align="center", alignment-adjust="middle".

Some text with

an inline block containing some smaller text in an fo:inline-container with "50%" width, "5em" height and display-align="after", alignment-adjust="after-edge".

Some text with

an inline block, containing some smaller text in an fo:inline-container with "auto" width, which currently defaults to "100% of the line-/block-width", and so shifts the inline-container to its own line

and some more text in the original size, and some more text to trigger a linebreak
