

The table has two columns, State and Facts. In the rows corresponding to states in the Pacific Time Zone (PST), the State and Facts table cells have a marker with the value of the State. That marker is retrieved in the table header and footer. All the possible boundary and positions are considered in this example.

rbwt = retrieve-boundary-within-table; rpwt = retrieve-position-within-table; f-i-c = first-including-carryover; f-s = first-starting; l-s = last-starting; l-e = last-ending; t = table; p = page; p-s = page-sequence; t-f = table-fragment.
