

Health Check Document

This document, when produced, verifies the basic health of the Thunderhead system. It produces three files in the disk output directory:

- One PostScript document
- One PDF document
- One HTML document

To run this Test Document you need to locate the "Health Check" transaction file on your install then submit this via the Directory Listener (by placing the file in the correct directory and changing the file extension to ".hch")

The embedding of the Thunderhead logo tests that the Public cache path has been set up properly; during Document production the logo is extracted from the CMS and stored in the external cache path. Failure to configure this properly will result in a red 'X' being displayed. For further information refer Trouble shooting in the help (F1).

Example data...

Data Item	Value
Name	Prima Patel
Address line 1	Hampden Road
Address line 2	Cardiff
Area	South Wales
Postcode/ZIP code	CF5 1ET
Email	test@thunderhead.com
