

VOLUME I

	In Memoriam	3
	Board Statement	6
	Executive Summary	9
	Report Synopsis	11
PART ONE	THE ACCIDENT	
Chapter 1	The Evolution of the Space Shuttle Program	
1.1	Genesis of the Space Transportation System	21
1.2	Merging Conflicting Interests	22
1.3	Shuttle Development, Testing, and Qualification	23
1.4	The Shuttle Becomes “Operational”	23
1.5	The <i>Challenger</i> Accident	24
1.6	Concluding Thoughts	25
Chapter 2	<i>Columbia’s</i> Final Flight	
2.1	Mission Objectives and Their Rationales	27
2.2	Flight Preparation	31
2.3	Launch Sequence	32
2.4	On-Orbit Events	35
2.5	Debris Strike Analysis and Requests for Imagery	37
2.6	De-Orbit Burn and Re-Entry Events	38
2.7	Events Immediately Following the Accident	39
Chapter 3	Accident Analysis	
3.1	The Physical Cause	49
3.2	The External Tank and Foam	50
3.3	Wing Leading Edge Structural Subsystem	55
3.4	Image and Transport Analyses	59
3.5	On-Orbit Debris Separation – The “Flight Day 2” Object	62
3.6	De-Orbit/Re-Entry	64
3.7	Debris Analysis	73
3.8	Impact Analysis and Testing	78
Chapter 4	Other Factors Considered	
4.1	Fault Tree	85
4.2	Remaining Factors	86
PART TWO	WHY THE ACCIDENT OCCURRED	
Chapter 5	From <i>Challenger</i> to <i>Columbia</i>	
5.1	The <i>Challenger</i> Accident and its Aftermath	99
5.2	The NASA Human Space Flight Culture	101
5.3	An Agency Trying to Do Too Much With Too Little	102
5.4	Turbulence in NASA Hits the Space Shuttle Program	105
5.5	When to Replace the Space Shuttle?	110
5.6	A Change in NASA Leadership	115
5.7	The Return of Schedule Pressure	116
5.8	Conclusion	117
Chapter 6	Decision Making at NASA	
6.1	A History of Foam Anomalies	121
6.2	Schedule Pressure	131
6.3	Decision-Making During the Flight of STS-107	140
6.4	Possibility of Rescue or Repair	173
Chapter 7	The Accident’s Organizational Causes	
7.1	Organizational Causes: Insights from History	178
7.2	Organizational Causes: Insights from Theory	180
7.3	Organizational Causes: Evaluating Best Safety Practices	182
