Command Line 101
An Introduction to the Command Line

TARGET AUDIENCE: Beginners with little or no Command line experience

DESCRIPTION

This workshop introduces the Linux command line interface (CLI) that is used by system administrators, software developers, and power users. The basics of navigating, file manipulation, text editing, and system commands and associated options will be covered. In addition, topics including piping, globbing, man pages, and remote access and file transfer features will be discussed to acquaint attendees with the common options used by Open Source contributors to manage projects.

WHAT ATTENDEES WILL LEARN

Basics of the Linux file system; navigating directories and listing files; creating, editing, moving, and deleting files; formating commands and using options; globbing and quoting; man and info pages.

REQUIREMENTS

Ubuntu 101 or at least one month using Linux preferred.

LENGTH OF TIME
2 hrs

COST
Free

ubuntu
debian
