

LO renders the rectangle of „Minimum test case.docx“ in grey scales. To create this, I took the original file „Greyscales instead of colors.docx“ and fiddled around. This issue is there since LO 4.2. From release 3.3 to 4.0 only a blank page appeared (with both files!)

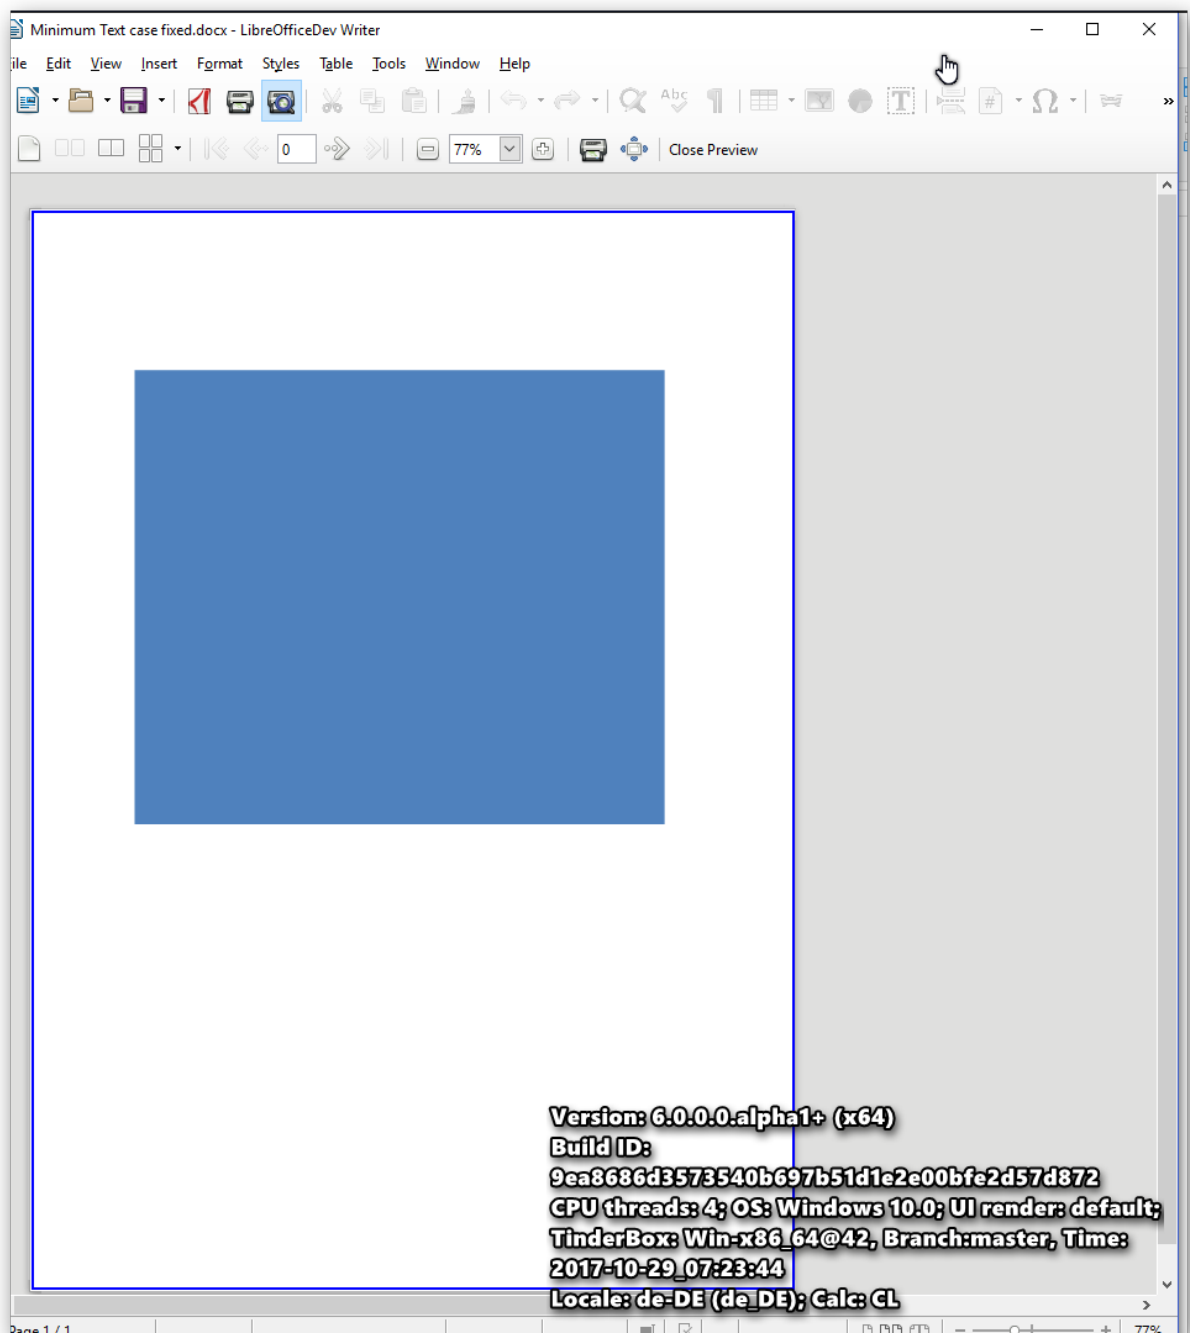

LO shows the right color of the rectangle, when it opens „Minimum Text case fixed.docx“. (I got this file by editing with another word processor, that rendered „Greyscales instead of colors.docx“ correct.)

In the fixed test case, word\charts\chart1.xml got the more lines (line 40 to 42):

```
<a:solidFill>
```

```
<a:schemeClr val="accent1"/>
```

```
</a:solidFill>
```

It seems to be about
„ChartShapeProperties“ → “SolidFill“ → “SchemeColor“

```
using DocumentFormat.OpenXml.Drawing;
using DocumentFormat.OpenXml;

namespace GeneratedCode
{
    public class GeneratedClass
    {
        // Creates an SchemeColor instance and adds its children.
        public SchemeColor GenerateSchemeColor()
        {
            SchemeColor schemeColor1 = new SchemeColor(){ Val =
SchemeColorValues.Accent1 };
            return schemeColor1;
        }
    }
}
```
