

Decimalseparator doesn't work right in Function of XML-Forms

2,50 € 3,15 € 565,00 €

Screenshot of the form added to this bug. The first two fields were added and the value is set to the last field. You could see there is a decimal-separator ',' instead of '.' in "Sum_Decimal_1_Decimal_2". LO set the field for this node with a red border: The form for this field seems to be wrong. Addin one Decimal with another give only Text, no a Decimal. Could be this is a special behavior for Germany – and all other user, who have set decimal-separator as ',' for default.

The bug isn't a bug of the form-fields. It's a bug of the code, which is submitted to the form. Try with right mousebutton on "Sum_Decimal_1_Decimal_2" → Change Element → Claculation → Condition. You get something like this:

The result is right, the decimal-separator is right here.
