Threads CPU : 4; OS : Windows 10.0 Build 19041; UI Render : par défaut; VCL: win;
Note : Do not focus on images but on the content of images showing the different situation and the parameters in the Libre Office interface.

Anchor to caracter with 90° rotation

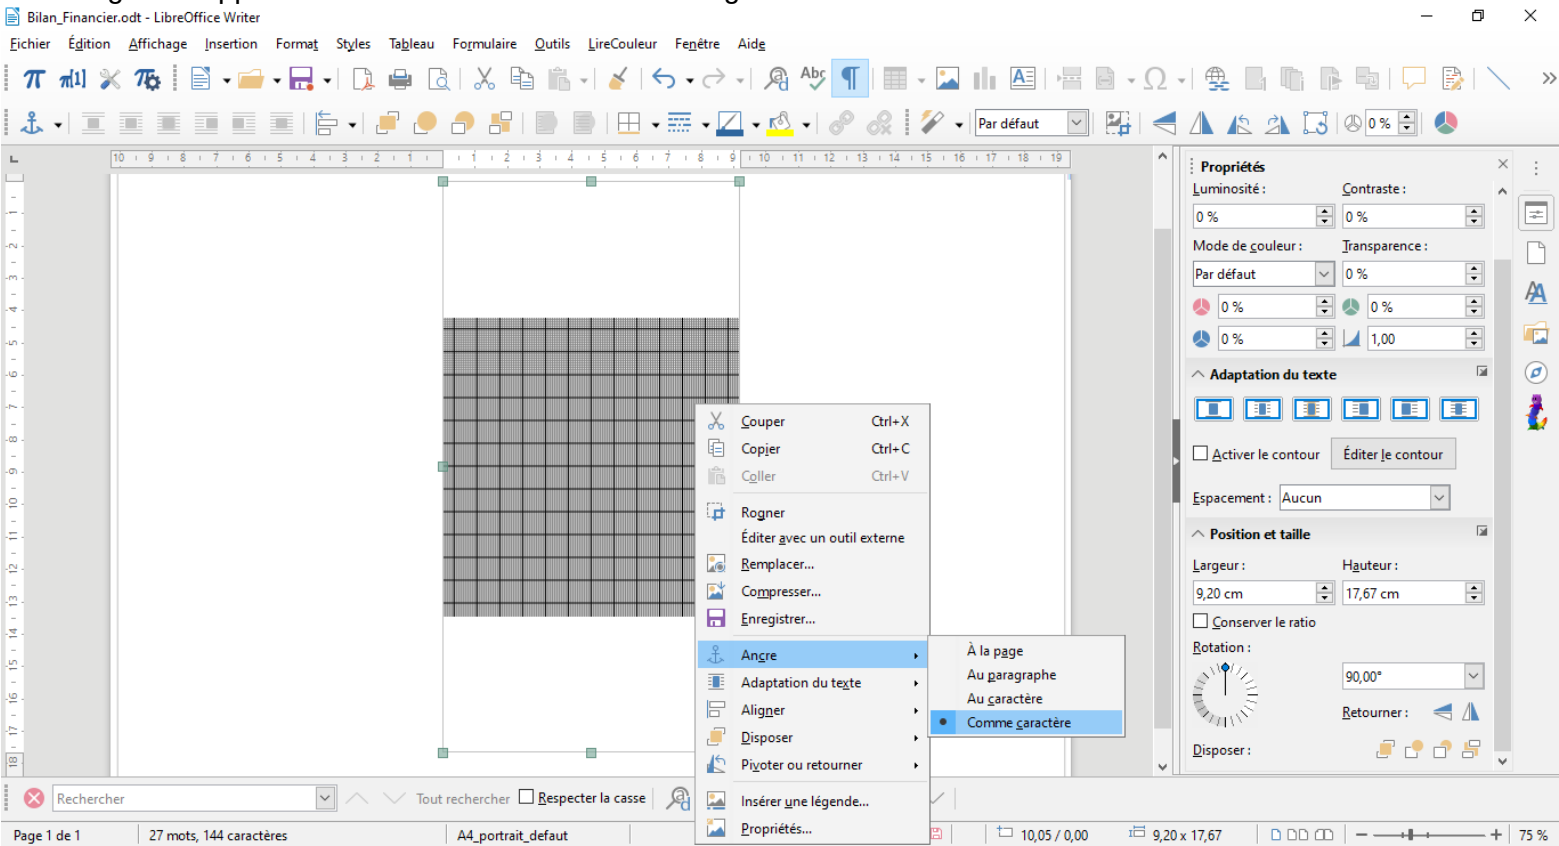

It is the image as I would like to see in my document except that I would like to place it thanks to the « as caracter » option.

Note that the image is a rotation (90°)

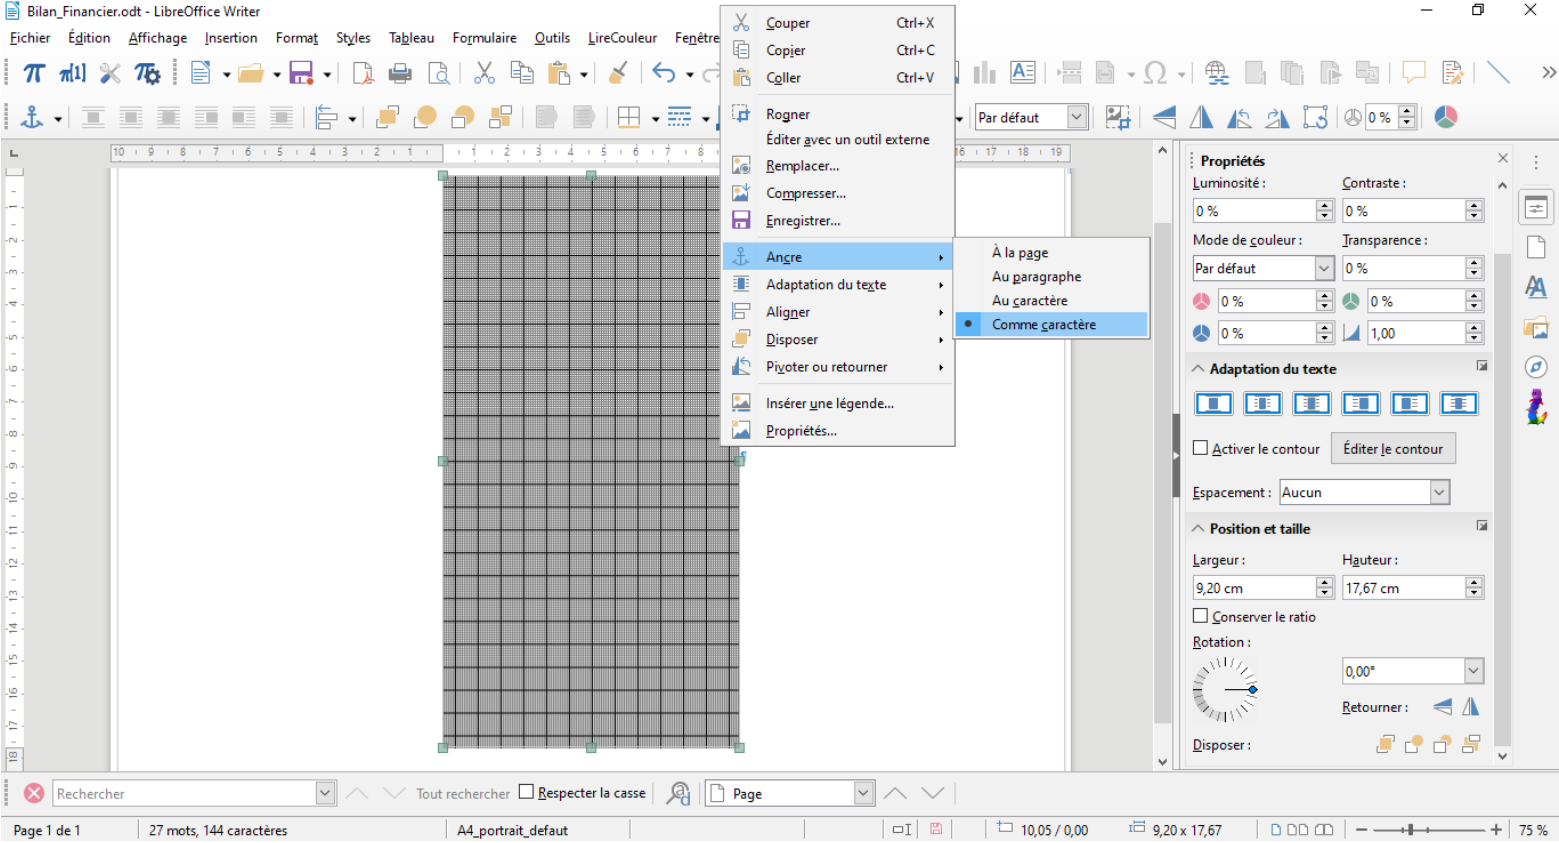

Anchor as caracter with 90° rotation

The image is cropped and the frame shows as I the image wasn't rotated to 90°.

Anchor as character with 0° rotation

Here, if I choice a 0° rotation, the image seems to appear as it should.

Anchor as character with 45° rotation

The 45° rotation seems to confirm that the image is cropped with a frame corresponding to a 0° rotation.
