

Print Preview in Draw when opening the dialog. The page has originally a width of 564 mm and a height of 400 mm. The dialog sets Page Layout to A4. Have a look at the real values for A4 on the right size. Have a look at the preview. Values doesn't match.

Changed to tab LibreOffice Draw. Changed Size → Distribute on multiple sheets of paper. Preview shows format A4 portrait. The content "Schnellbahnnetz" is shown as format A4 landscape.

Switched to the second paper. It will be shown A4 landscape. The content will also be shown as A4 landscape, but it is (in the document) defined as nearly A2, which is about 4\*A4!

Back to page 1 now. It will show the right values for A4-landscape and the whole content of "Schnellbahnnetz", which is 564 mm width and 400 height. It will be printed as 297 mm width and 210 mm height.

You will get one page, which prints the whole content (as "Fit to printable page") and 3 pages, which will show diffent parts of the first page in the same size, which is much too small.
