

Registration of research paper

Scientific research paper is a fairly voluminous paper, which includes serious elements of analysis and synthesis on a specific topic. Moreover, it is necessary to provide a mandatory evidence base to substantiate the results obtained.

Even if these points are taken into account and sufficiently clearly formulated, this is not a guarantee of a successful defense result. After all, there are still mandatory requirements for registration, non-compliance with which may negatively affect the protection process.

In such cases, an excellent [cheap research paper writing service](#) can always come to the rescue.

Requirements for the structure of research paper

It is necessary to understand that today there is a standard for the design of research papers, which should be strictly adhered to. It applies to all types of Scientific research paper - prospecting, scientific research and fundamental, regardless of the field of technology and science. Excluding humanitarian profile only.

The standard is used in their work by industrial and industrial enterprises and associations, private organizations, joint stock companies and others.

General requirements include:

Following a specific structure.

Presentation style.

Report formatting requirements.

If we talk about the structure of research paper, then in 2020 the same general requirements are imposed on it as in previous periods. The plan looks like this:

Title page with information about the author, the title of the work and the organization in which the defense of the research paper was carried out and is planned.

Content that includes work items.

List of used abbreviations (abbreviations) and specific terms. Depending on the work, this item may be present or excluded from the general plan of the Research paper.

Introduction, in which the author sets himself the goal of the study and the tasks that will need to be revealed in the course of the work. Also, here can be reflected the methods by which the achievement of the goal will be realized.

The main part, divided into chapters. It reflects, as a rule, a theoretical study on the problem posed. In the second, a general evidence base is provided. Whereas in the third part specific tasks are solved, with the possibility of their application in practice. In the overwhelming majority of cases, this section is limited to three chapters, although with more serious research paper, the number of sections can be increased in the main part.

The conclusion contains the main conclusions of the work. Also in this part a further perspective of research in this area is given. As well as the practical application and value of the research done.

List of used literature. All publications that were used in the work should be presented here in alphabetical order.

The application is drawn up when the work is accompanied by additional graphs, tables, diagrams, drawings and others.

In the overwhelming majority of cases, this is the sequence of presentation of the research material.

In addition to the main part, most of the work (except for student coursework and bachelor's diplomas) is also accompanied by an abstract. It is used for dissertations, both master's and master's and doctoral dissertations. This document briefly reflects the essence of all the work done while maintaining its structure.
