

Starting table

Row	Background color
2	red
3	green
1	blue

Recheck the bug in

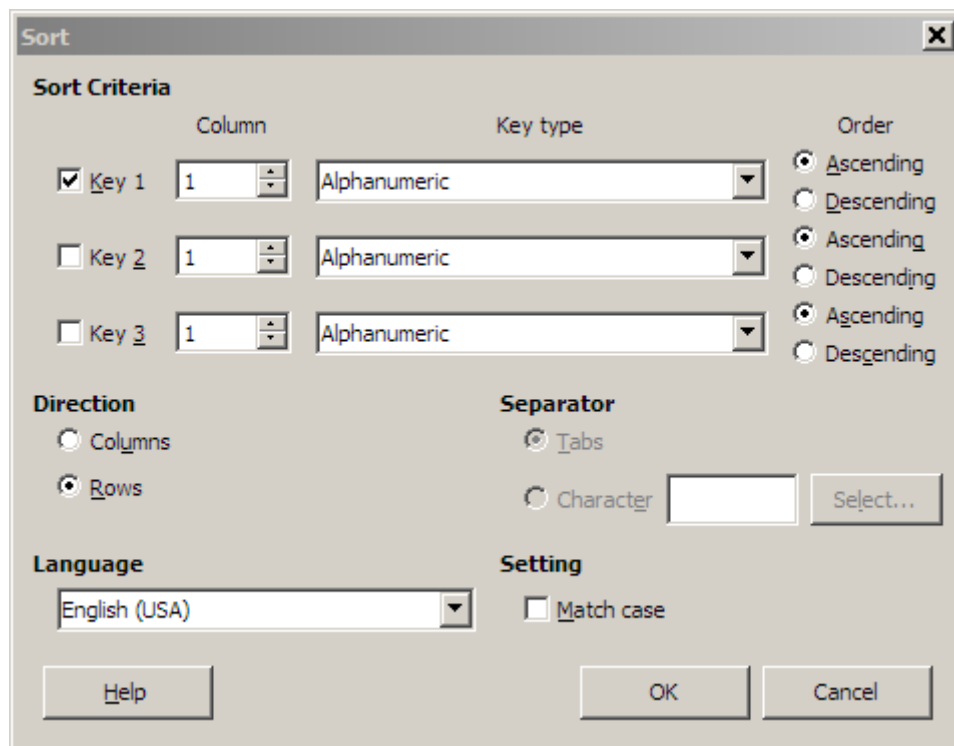

Version: 5.2.1.2

Build ID: 31dd62db80d4e60af04904455ec9c9219178d620

Windows 7 Professional, x64

Copy the table above, select 3 rows (without header row)

Click Table, Sort

After sorting (ascending) on column 1, the same problem is still there

Row	Background color
1	blue
2	red
3	green

i.e. the text is sorted correctly but the background colors remain in their original position. The expected behavior is that the red background associated with row 2 (or any other cell or row properties) should remain with the row after sorting.

Conclusion: the bug is still there

Commenter Pascal Becker reported in Comment 10 that:
Just tested it with one column and some number entries and different background colors. Seems to work now.

Test this single column table

Single Column
30
21
25
16

After sorting, the result is ...

Single Column
16
21
25
30

... and the background colors remain in place.

Conclusion: the bug is still there even for a single column table
