

You'll find examples on the second page.

Hi everyone,

in my opinion, I've found a bug concerning the table cell padding in LibreOffice Writer.

Let's say you have a table like this one :

```
+++++++
+   + B1 +
+ A1 +++++
+   + B2 +
+++++++
+   + B3 +
+   +++++
+ A2 + B4 +
+   +++++
+   + B5 +
+++++++
```

Cells of column A have a padding of 0.1 cm on all sides, cells of column B only have a 0.1 cm padding on the left and right side, but not on top or bottom (0.0 cm). Normally, text in column B should be closer to the top and bottom border, but it isn't. Unfortunately, you don't see no difference whether the top and bottom padding is 0.0 cm or 0.1 cm. If you change in column B the value to 0.2 cm, the padding becomes visibly broader, even at column A.

It seems that LibreOffice Writer doesn't respect the cell-specific padding, at least for the top and bottom padding.

Julius

(I'll attach a file where you can see what I mean.)

A: 0.1 cm on all sides - B: top/bottom: 0 cm, left/right: 0.1 cm

cell A1 - type A	cell B1 - type B
	cell B2 - type B
cell A3 - type A	cell B3 - type B
	cell B4 - type B
	cell B5 - type B

A: 0.1 cm on all sides - B: 0.1 cm on all sides

cell A1 - type A	cell B1 - type B
	cell B2 - type B
cell A3 - type A	cell B3 - type B
	cell B4 - type B
	cell B5 - type B

A: 0.1 cm on all sides - B: 0.2 cm on all sides

cell A1 - type A	cell B1 - type B
	cell B2 - type B
cell A3 - type A	cell B3 - type B
	cell B4 - type B
	cell B5 - type B

A: 0.2 cm on all sides - B: 0.1 cm on all sides

cell A1 - type A	cell B1 - type B
	cell B2 - type B
cell A3 - type A	cell B3 - type B
	cell B4 - type B
	cell B5 - type B
