

## Bug 51452: Group with repeated area only set pagebreak before and after area

The screenshot shows the Crystal Reports Designer interface. On the left, the 'Page Header' and 'Page Footer' are visible. The 'Group Header' section contains a 'Name' field. The 'Detail' section contains fields for 'Date', 'Number', 'UnitPrice', and 'Price'. The 'Force New Page' property is set to 'None' for the group header.

**General**

Name.....	Group Header
Force New Page.....	None
Keep Together.....	No
Repeat Section.....	No
Visible.....	Yes
Height.....	1,01cm
Conditional Print Expression....	
Background Transparent.....	Yes
Background color.....	

Group Header with the field "Name" is set to "Force New Page": "None" – no Pagebreak after this group.

The screenshot shows the Crystal Reports Designer interface. On the left, the 'Page Header' and 'Page Footer' are visible. The 'Group Header' section contains fields for 'Date', 'Number', 'UnitPrice', and 'Price'. The 'Detail' section contains fields for 'Date', 'Number', 'UnitPrice', and 'Price'. The 'Force New Page' property is set to 'None' for the group header, and the 'Repeat Section' property is set to 'Yes'.

**General**

Name.....	Group Header
Force New Page.....	None
Keep Together.....	No
Repeat Section.....	Yes
Visible.....	Yes
Height.....	1,54cm
Conditional Print Expression....	
Background Transparent.....	Yes
Background color.....	

Group Header with the fieldnames "Date", "Number" ... were also set to "Force New Page": "None". The "Repeat Section" is set to "Yes". So the headers of the fields in the section "Detail" should always be shown above this section, when a new page begins for the same group.

And here is the executed report. On the first page is the header "Name". Then a pagebreak before the header "Date", "Number" ... begins on the second and third page. Then a pagebreak and the header "Name" for the second value of the group and so on. Remember: No pagebreak is set in the groups.

*The idea behind this function could be, that a repeat without a pagebreak of the whole group make no sense. But wenn you will, for example, make a printout of a bill, the adress in the first group "Name" is print alone on one page – and then the content follows. The bill would never be payed, because there is nothing to see on the first page ...*
