Bug 52126: Correct positioning in reports not possible.

General

Name..
Position X....................................
Position Y.................................... 17,00cm
Width..
Height...
Print repeated values.............. Yes
Conditional Print Expression....
Print When Group Change....... No
Font...
Horz. Alignment...................... Left
Vert. Alignment....................... Top

Report without Header, Group or other areas. Elements in the section "Detail" could only be position by arrowkeys or mouse. In the properties you could read almost "17,00cm", when Y is bigger than 17cm.
See the marked rectangle and the text beside the rectangle. They are both positioned at 30,7cm.

Varchar   =Varchar   Page: 29,7cm, Margins on Top and Bottom 2 cm, only Area is "Detail". Page-break after each detail. Position of [Varchar]: y=0cm (+2cm margin).

Integer   =Integer   Position of [Integer]: y=10cm

Decimal_8_2   =Decimal_8_2   Position of [Decimal_8_2]: y=20cm, shown in properties as "y=17cm".

Date   =Date   Position of [Date]: y=25,7cm (must be top of page 2 +2cm margin)

Here should be the Position of rectangle: y=30,7cm (must be top of page 2 2cm margin 5cm.
Position shown as in Decimal_8_2, Date and Time: 17cm.

Time   =Time   Position of [Time]: y=35,7cm (must be 10cm + 2cm margin on page 2.

Varchar	All fields filled	Page: 29,7 cm, Margins on Top and Bottom 2 cm, only Area is "Detail". Page-break after each detail. Position of [Varchar]: y=0cm (+2cm margin).

Date	12/30/99	Position of [Date]: y=25,7cm (must be top of page 2 +2cm margin)

← Here should be the Position of rectangle: y=30,7cm (must be top of page 2 2cm margin 5cm.
Position shown as in Decimal_8_2, Date and Time: 17cm.

Integer	1234567	Position of [Integer]: y=10cm

Time	12:00:00	Position of [Time]: y=35,7cm (must be 10cm +2cm margin on page 2.

Decimal_8_2	13.50	Position of [Decimal_8_2]: y=20cm, shown in properties as "y=17cm".

Look at the position of the rectangle. It isn't beside the text as it is planned in the design. It's direct under the field, which is the next above the rectangle. Text and datafileds are positioned at the right place at the first and the second page of the section "Detail".

Page Header 2cm isn't shown with first Detail!

Varchar   =Varchar   Page: 29,7 cm, Margins on Top and Bottom 2 cm, Page Header and Page Footer each 1cm, only Area is "Detail". Page-break after each detail. Position of [Varchar]: y=0cm (+2cm margin +1cm Header).

Integer   =Integer   Position of [Integer]: y=10cm

Decimal_8_2   =Decimal_8_2   Position of [Decimal_8_2]: y=15cm, shown in properties as "y=17cm".

Date   =Date   Position of [Date]: y=21,7cm (must be top of page 2 +2cm margin +2cm Header, because 29,7cm - 4cm margin - 2cm header - 2cm footer = 21,7cm!)

Time   =Time   Position of [Time]: y=31,7cm (must be 10cm + 2cm margin + 2cm Header on page 2.

Page Footer 2cm isn't shown with first Detail!

In this example the report is planned with 2 other sections: Pageheader and pagefooter. Both are 2 cm high, so that the position of the fields in the section "Detail" had to be corrected.

The position of the field "Date" has to be at 21,7cm, because the page is 29,7cm, the margins are 2 cm and header and footer are 2 cm. The place for the section "Detail" on one page is 29,7cm – 8cm = 21,7cm.

And here is the performed report.
There is no section for the header and the footer together with the first section "Detail". So the text couldn't set correct on the second page.
"Date" is on the first page.
After the first section "Detail" header and footer are shown at every new page. "Date" is at the second page of the section "Detail". But it is not positionende at the top of the page, as "Varchar" on the first page is positioned.

Position is not the same from top of the page.

Page 1:

Varchar	All fields filled
