

## Ethernet Packet Content

Notes	
1	If value $\leq$ 1500 this specifies the length of the payload. If $\geq$ 1536 (maximum packet size) then this is a type field
2	The payload can be zero to 1500 octets
3	When the payload is too small the frame is padded to the minimum length. The protocol processing must allow for this if the “type” field is $\geq$ 1536

## Ethernet – Send Data
