Insert / frame / after FRAME window appears click OK and start typing in the box.

The text in a box could be a longer one . For that, automated hyphenation and other paragraph formats become important. However, the window FRAME does not contain the tabs to format the paragraph. Therefore, it becomes necessary to select PARAGRAPH additionally to format the paragraph. This slows down productivity.

Request: Please add the normal PARAGRAPH window as a ab to the FRAME window

Frame		×
