

Setting attributes somewhere can affect a word with two or more combining characters causing some to be hidden. There also seem to be other causes as well that I have not tracked down.

Andika font: árá

á = u+0041 u+0331 u+0301

make a formatting change to R (like a blue background),
and some of the following letters can simply disappear:

ár

Gentium font: árá

ár

adding characters in front lets it appear again. árá
(if you delete this, the last 'a' will disappear again) árá

Doulos SIL font: árá

ár

árá12345* 5 characters are still hidden at the end of this line

123456 árá12345* 5 characters are still hidden at the end of this
line hide
