

page1

Steps to reproduce:

- create a new two page document.
- goto page styles, Default Style, modify, enable footer, but disable "same content left/right".
- create a separate footer for the left and right page.
- save, close, and reopen. You should see the same footer on both pages.

Notice the footer on this document. The PDF will show the different footers (page number plus the texts "footer odd/right" or "footer even/left". You will see the bug when you open this document in LO, both footers will appear with "footer odd/right"
