

# Content of Tablecontrols isn't printed, when the whole Fonts are formatted black

## LO-Versions up to 3.3.4:

The whole content of the form is printed in every situation. When you print it in a file it shows this properties in the filemanager

"Dolphin" (Linux-KDE):

## LO-Versions beginning with LO 3.4.0beta1:

The content of the tablecontrol isn't printed except the headers of the tablecontrol and the content of the check-boxes. Even if a currency-field, written in red characters, appears, the content is shown beginning with this field. So if there is a currency-field with red characters at the beginning of the tablecontrol the whole content is shown.

When you print it in a file it shows this properties:

The data of the form are shown as "Title" in the properties of the file.
