Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

	One	Two	To the left is a table inside a table, with some cells merged.
	Three	Four	

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

863. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
864. Two

Multi-level Lists

863. One
 - 863.1. Two
 - 863.1.1. Three
 - 863.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 863.1.3. Five
 864. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item

-
- Four
 - Five

Continued Lists

mdccxxv. One
mdccxxvi. Two

An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.

mdccxxvii. We now resume our normal programming
mdccxxviii. Four

ⁱⁱ Endnotes are typically used for longer notes, they remain endnotes when converted into ebook form, except that they have an additional backlink to make it easy to return to the current position after reading the note.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “Add Books” button and then click “Convert”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “OK”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in **inverse video**.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than

inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

Drop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

869. One, with a very long line to demonstrate that the hanging indent for the list is working correctly

870. Two

Multi-level Lists

869. One

869.1. Two

869.1.1. Three

869.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

869.1.3. Five

870. Six

A Multi-level list with bullets:

- One

5:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “Add Books” button and then click “Convert”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “OK”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

	One	Two	To the left is a table inside a table, with some cells merged.
	Three	Four	

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **"Add Books"** button and then click **"Convert"**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **"OK"**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than

inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even `i` and `m`. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			

Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat 1

2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

Drop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Numbered List.....</i>	8
<i>Multi-level Lists.....</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

- 877. One, with a very long line to demonstrate that the hanging indent for the list is working correctly

Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

	One	Two	To the left is a table inside a table, with some cells merged.
	Three	Four	

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat

3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

883. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
884. Two

Multi-level Lists

883. One
 - 883.1. Two
 - 883.1.1. Three
 - 883.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 883.1.3. Five
 884. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item

-
- Four
 - Five

Continued Lists

mdcclxv. One

mdcclxvi. Two

An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.

mdcclxvii. We now resume our normal programming

mdcclxviii. Four

14:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **"Add Books"** button and then click **"Convert"**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **"OK"**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than

inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			

Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

889. One, with a very long line to demonstrate that the hanging indent for the list is working correctly

890. Two

Multi-level Lists

889. One

889.1. Two

889.1.1. Three

889.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

889.1.3. Five

890. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four

17:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “Add Books” button and then click “Convert”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “OK”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

	One	Two	To the left is a table inside a table, with some cells merged.
	Three	Four	

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	11 1	12 1	13 2	14 3	15 4
16 1 6	17	18 1 8	19 1 9	20 2 0	21 2 1	22 2 2
23 2 3	24	25 2 5	26 2 6	27 2 7	28 2 8	29 2 9
30 3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

ⁱⁱ Endnotes are typically used for longer notes, they remain endnotes when converted into ebook form, except that they have an additional backlink to make it easy to return to the current position after reading the note.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5

pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

897. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
898. Two

Multi-level Lists

897. One

						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

903. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
904. Two

Multi-level Lists

903. One
- 903.1. Two

-
- 903.1.1. Three
- 903.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 903.1.3. Five
904. Six
- A Multi-level list with bullets:
- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
 - Five

Continued Lists

- mdcccviii. We now resume our normal programming
- mdcccviii. Four

6:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

909. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
910. Two

Multi-level Lists

909. One
 - 909.1. Two
 - 909.1.1. Three
 - 909.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 909.1.3. Five
 910. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Continued Lists

- mdcccxvii. One
- mdcccxviii. Two

An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.

- mdcccxix. We now resume our normal programming
- mdcccxx. Four

10:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	11	12	13	14	15

23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Table of Contents</i>	5
Images	7
Lists	8
<i>Bulleated List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

917. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
918. Two

Multi-level Lists

917. One
 - 917.1. Two
 - 917.1.1. Three
 - 917.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 917.1.3. Five
 918. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Continued Lists

- mdcccxxxiii. One
- mdcccxxxiv. Two

An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.

- mdcccxxxv. We now resume our normal programming
- mdcccxxxvi. Four

15:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

923. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
924. Two

Multi-level Lists

923. One
- 923.1. Two

-
- 923.1.1. Three
- 923.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 923.1.3. Five
924. Six
- A Multi-level list with bullets:
- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
 - Five

Continued Lists

- mdcccxliv. One
- mdcccxlv. Two
- An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.
- mdcccxlvii. We now resume our normal programming
- mdcccxlviii. Four

18:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **"Add Books"** button and then click **"Convert"**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **"OK"**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

	One	Two	To the left is a table inside a table, with some cells merged.
	Three	Four	

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

929. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
930. Two

Multi-level Lists

929. One
- 929.1. Two
- 929.1.1. Three
- 929.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 929.1.3. Five
930. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Continued Lists

- mdccclvii. One
- mdccclviii. Two

An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.

- mdccclix. We now resume our normal programming
- mdccclx. Four

ⁱⁱ Endnotes are typically used for longer notes, they remain endnotes when converted into ebook form, except that they have an additional backlink to make it easy to return to the current position after reading the note.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in **inverse video**.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8

23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Table of Contents</i>	5
Images	7
Lists	8
<i>Bulleated List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

937. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
938. Two

Multi-level Lists

937. One
- 937.1. Two
- 937.1.1. Three
- 937.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 937.1.3. Five
938. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Continued Lists

- mdccclxxiii. One
- mdccclxxiv. Two

An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.

- mdccclxxv. We now resume our normal programming
- mdccclxxvi. Four

7:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

943. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
944. Two

Multi-level Lists

943. One
- 943.1. Two

-
- 943.1.1. Three
- 943.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 943.1.3. Five
944. Six
- A Multi-level list with bullets:
- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
 - Five

Continued Lists

- mdccclxxxv. One
- mdccclxxxvi. Two
- An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.
- mdccclxxxvii. We now resume our normal programming
- mdccclxxxviii. Four

12:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **"Add Books"** button and then click **"Convert"**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **"OK"**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “Add Books” button and then click “Convert”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “OK”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

951. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
952. Two

Multi-level Lists

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

957. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
958. Two

Multi-level Lists

957. One
- 957.1. Two
- 957.1.1. Three
- 957.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 957.1.3. Five
958. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Continued Lists

- mcmxiii. One
- mcmxiv. Two

An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.

- mcmxv. We now resume our normal programming
- mcmxvi. Four

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

963. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
964. Two

Multi-level Lists

963. One
- 963.1. Two

-
- 963.1.1. Three
- 963.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 963.1.3. Five
964. Six
- A Multi-level list with bullets:
- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
 - Five

- An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.
- mcmxxvii. We now resume our normal programming
- mcmxxviii. Four

4:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **"Add Books"** button and then click **"Convert"**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **"OK"**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	11	12	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Table of Contents</i>	5
Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

971. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
972. Two

Multi-level Lists

971. One
 - 971.1. Two

-
- 971.1.1. Three
- 971.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 971.1.3. Five
972. Six
- A Multi-level list with bullets:
- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
 - Five

Continued Lists

- mcmxli. One
- mcmxlii. Two
- An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.
- mcmxlili. We now resume our normal programming
- mcmxliv. Four

30 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleated List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

977. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
978. Two

Multi-level Lists

977. One
 - 977.1. Two
 - 977.1.1. Three
 - 977.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

13:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

983. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
984. Two

Multi-level Lists

983. One
- 983.1. Two

-
- 983.1.1. Three
- 983.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 983.1.3. Five
984. Six
- A Multi-level list with bullets:
- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
 - Five

Continued Lists

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	11	12	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

991. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
992. Two

Multi-level Lists

991. One
 - 991.1. Two

-
- 991.1.1. Three
- 991.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 991.1.3. Five
992. Six
- A Multi-level list with bullets:
- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
 - Five

Continued Lists

- mcmlxxxi. One
- mcmlxxxii. Two
- An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.
- mcmlxxxiii. We now resume our normal programming
- mcmlxxxiv. Four

ⁱⁱ Endnotes are typically used for longer notes, they remain endnotes when converted into ebook form, except that they have an additional backlink to make it easy to return to the current position after reading the note.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

997. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
998. Two

Multi-level Lists

997. One
 - 997.1. Two
 - 997.1.1. Three
 - 997.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 997.1.3. Five
 998. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Continued Lists

- mcmxciii. One
- mcmxciv. Two

An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.

- mcmxcv. We now resume our normal programming
- mcmxcvi. Four

5:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1003. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1004. Two

Multi-level Lists

1003. One
- 1003.1. Two

1003.1.1. Three

1003.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

1003.1.3. Five

1004. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

8:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	11	12	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleated List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot ●. Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1011. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1012. Two

Multi-level Lists

1011. One
 - 1011.1. Two

-
- 1011.1.1. Three
- 1011.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 1011.1.3. Five
1012. Six
- A Multi-level list with bullets:
- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
 - Five

Continued Lists

- mmxxii. Two
- An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.
- mmxxiii. We now resume our normal programming
- mmxxiv. Four

14:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1017. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1018. Two

Multi-level Lists

1017. One
- 1017.1. Two
- 1017.1.1. Three
- 1017.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 1017.1.3. Five
1018. Six

A Multi-level list with bullets:

- One

- mmxxxvi. Four

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

ⁱⁱ Endnotes are typically used for longer notes, they remain endnotes when converted into ebook form, except that they have an additional backlink to make it easy to return to the current position after reading the note.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8

	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot ●. Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a

floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1025. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1026. Two

Multi-level Lists

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

Drop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5

pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1031. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1032. Two

Multi-level Lists

1031. One
 - 1031.1. Two
 - 1031.1.1. Three
 - 1031.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

- mmlxiii. We now resume our normal programming
- mmlxiv. Four

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot ●. Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a

floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1037. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1038. Two

Multi-level Lists

1037. One
 - 1037.1. Two
 - 1037.1.1. Three
 - 1037.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1037.1.3. Five
1038. Six

10:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5

pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8

	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot ●. Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a

floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1045. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1046. Two

Multi-level Lists

1045. One
 - 1045.1. Two
 - 1045.1.1. Three
 - 1045.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1045.1.3. Five
1046. Six

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

Drop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5

pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1051. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1052. Two

Multi-level Lists

1051. One
 - 1051.1. Two
 - 1051.1.1. Three
 - 1051.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8

	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

The next category of image is a

floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1057. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1058. Two

Multi-level Lists

1057. One
 - 1057.1. Two
 - 1057.1.1. Three
 - 1057.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1057.1.3. Five
1058. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Continued Lists

mmcxvi. Four

ⁱⁱ Endnotes are typically used for longer notes, they remain endnotes when converted into ebook form, except that they have an additional backlink to make it easy to return to the current position after reading the note.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	11	12	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8

	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Multi-level Lists.....</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot ●. Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a

floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1065. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1066. Two

Multi-level Lists

1065. One
 - 1065.1. Two
 - 1065.1.1. Three
 - 1065.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1065.1.3. Five
1066. Six

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

Drop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5

pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1071. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1072. Two

Multi-level Lists

1071. One
 - 1071.1. Two
 - 1071.1.1. Three
 - 1071.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1071.1.3. Five

1072. Six

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8

	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot ●. Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a

floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1077. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1078. Two

Multi-level Lists

1077. One
 - 1077.1. Two
 - 1077.1.1. Three
 - 1077.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1077.1.3. Five
1078. Six

A Multi-level list with bullets:

- One

15:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

Drop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5

pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8

	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot ●. Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a

floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1085. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1086. Two

Multi-level Lists

1085. One
 - 1085.1. Two
 - 1085.1.1. Three
 - 1085.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

19:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1091. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1092. Two

Multi-level Lists

1091. One
 - 1091.1. Two
 - 1091.1.1. Three
 - 1091.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1091.1.3. Five
 1092. Six

A Multi-level list with bullets:

- mmclxxxiii. We now resume our normal programming
- mmclxxxiv. Four

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **"Add Books"** button and then click **"Convert"**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **"OK"**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8

	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

Drop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5

pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

- 1099. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
- 1100. Two

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8

	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot ●. Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a

floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1105. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1106. Two

Multi-level Lists

1105. One
 - 1105.1. Two
 - 1105.1.1. Three
 - 1105.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1105.1.3. Five
1106. Six

13:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Bulleted List</i>	<i>8</i>
<i>Numbered List</i>	<i>8</i>
<i>Multi-level Lists</i>	<i>8</i>
<i>Continued Lists</i>	<i>8</i>

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1111. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1112. Two

Multi-level Lists

1111. One
 - 1111.1. Two
 - 1111.1.1. Three
 - 1111.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1111.1.3. Five

1112. Six

A Multi-level list with bullets:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8

	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

19:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

Drop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5

pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1119. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1120. Two

Multi-level Lists

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors

3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot ●. Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a

floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1125. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1126. Two

Multi-level Lists

1125. One
 - 1125.1. Two
 - 1125.1.1. Three
 - 1125.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1125.1.3. Five

5:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

Drop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5

pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1131. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1132. Two

Multi-level Lists

1131. One
 - 1131.1. Two
 - 1131.1.1. Three
 - 1131.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1131.1.3. Five

1132. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four

- mmcclxiii. We now resume our normal programming
- mmcclxiv. Four

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8

	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5

pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1139. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1140. Two

Multi-level Lists

1139. One
- 1139.1. Two
- 1139.1.1. Three
- 1139.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 1139.1.3. Five

1140. Six

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot ●. Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a

floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1145. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1146. Two

Multi-level Lists

1145. One
 - 1145.1. Two
 - 1145.1.1. Three
 - 1145.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

17:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1151. One, with a very long line to demonstrate that the hanging indent for the list is working correctly

1152. Two

Multi-level Lists

1151. One

1151.1. Two

1151.1.1. Three

1151.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

1151.1.3. Five

1152. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

mmcccii. Two

An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.

mmccciii. We now resume our normal programming

mmccciv. Four

ⁱⁱ Endnotes are typically used for longer notes, they remain endnotes when converted into ebook form, except that they have an additional backlink to make it easy to return to the current position after reading the note.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	11	12	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1159. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1160. Two

Multi-level Lists

1159. One
- 1159.1. Two

1159.1.1. Three

1159.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Table of Contents</i>	5
Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1165. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1166. Two

Multi-level Lists

1165. One
 - 1165.1. Two
 - 1165.1.1. Three
 - 1165.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1165.1.3. Five

1166. Six

- mmcccxxxi. We now resume our normal programming
- mmcccxxxii. Four

10:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1171. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1172. Two

Multi-level Lists

1171. One
 - 1171.1. Two

1171.1.1. Three

1171.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

1171.1.3. Five

1172. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **"Add Books"** button and then click **"Convert"**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **"OK"**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	11	12	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1179. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1180. Two

Multi-level Lists

1179. One
- 1179.1. Two

1179.1.1. Three

1179.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

1179.1.3. Five

1180. Six

A Multi-level list with bullets:

18:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1185. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1186. Two

Multi-level Lists

1185. One
 - 1185.1. Two
 - 1185.1.1. Three
 - 1185.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1185.1.3. Five

1186. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Continued Lists

- mmccclxix. One
- mmccclxx. Two

An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.

- mmccclxxi. We now resume our normal programming
- mmccclxxii. Four

ⁱⁱ Endnotes are typically used for longer notes, they remain endnotes when converted into ebook form, except that they have an additional backlink to make it easy to return to the current position after reading the note.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	11	12	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Table of Contents</i>	5
Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1193. One, with a very long line to demonstrate that the hanging indent for the list is working correctly

3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1199. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1200. Two

Multi-level Lists

1199. One
- 1199.1. Two

1199.1.1. Three

1199.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

1199.1.3. Five

1200. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

12:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1205. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1206. Two

Multi-level Lists

1205. One
 - 1205.1. Two
 - 1205.1.1. Three
 - 1205.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1205.1.3. Five

1206. Six

15:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

	One	Two	To the left is a table inside a table, with some cells merged.
	Three	Four	

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Table of Contents</i>	5
Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1213. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1214. Two

Multi-level Lists

1213. One
- 1213.1. Two
- 1213.1.1. Three
- 1213.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

- mmcdxxviii. Four

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

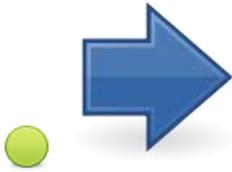

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1219. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1220. Two

Multi-level Lists

1219. One
- 1219.1. Two

1219.1.1. Three

1219.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

1219.1.3. Five

1220. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

mmcdxxxviii. Two

An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.

mmcdxxxix. We now resume our normal programming

mmcdxl. Four

4:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **"Add Books"** button and then click **"Convert"**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **"OK"**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1225. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1226. Two

Multi-level Lists

1225. One
 - 1225.1. Two
 - 1225.1.1. Three
 - 1225.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1225.1.3. Five

1226. Six

A Multi-level list with bullets:

7:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **"Add Books"** button and then click **"Convert"**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **"OK"**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Table of Contents</i>	5
Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1233. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1234. Two

Multi-level Lists

1233. One
 - 1233.1. Two
 - 1233.1.1. Three
 - 1233.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

13:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1239. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1240. Two

Multi-level Lists

1239. One
- 1239.1. Two

1239.1.1. Three

1239.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

1239.1.3. Five

1240. Six

A Multi-level list with bullets:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1247. One, with a very long line to demonstrate that the hanging indent for the list is working correctly

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Table of Contents</i>	5
Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1253. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1254. Two

Multi-level Lists

1253. One
- 1253.1. Two
- 1253.1.1. Three
- 1253.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

5:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1259. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1260. Two

Multi-level Lists

1259. One
- 1259.1. Two

1259.1.1. Three

1259.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

1259.1.3. Five

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

	One	Two	To the left is a table inside a table, with some cells merged.
	Three	Four	

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	11	12	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1267. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1268. Two

Multi-level Lists

1267. One
- 1267.1. Two

1267.1.1. Three

1267.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

1267.1.3. Five

1268. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Continued Lists

23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1273. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1274. Two

Multi-level Lists

1273. One
- 1273.1. Two
- 1273.1.1. Three
- 1273.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

- mmdxlvii. We now resume our normal programming
- mmdxlviii. Four

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1279. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1280. Two

Multi-level Lists

1279. One
- 1279.1. Two

1279.1.1. Three

1279.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

1279.1.3. Five

1280. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Continued Lists

mmdlx. Four

ⁱⁱ Endnotes are typically used for longer notes, they remain endnotes when converted into ebook form, except that they have an additional backlink to make it easy to return to the current position after reading the note.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	11	12	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Table of Contents</i>	5
Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1287. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1288. Two

Multi-level Lists

1287. One
- 1287.1. Two

1287.1.1. Three

1287.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

1287.1.3. Five

1288. Six

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **"Add Books"** button and then click **"Convert"**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **"OK"**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1293. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1294. Two

Multi-level Lists

1293. One
- 1293.1. Two
- 1293.1.1. Three
- 1293.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 1293.1.3. Five

1294. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Continued Lists

mmdlxxxv. One

mmdlxxxvi. Two

An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.

mmdlxxxvii. We now resume our normal programming

mmdlxxxviii. Four

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.
