Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1295. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1296. Two

Multi-level Lists

1295. One
- 1295.1. Two

1295.1.1. Three

1295.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

1295.1.3. Five

1296. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **"Add Books"** button and then click **"Convert"**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **"OK"**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	11	12	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1303. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1304. Two

Multi-level Lists

1303. One
- 1303.1. Two

1303.1.1. Three

1303.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

1303.1.3. Five

1304. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1309. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1310. Two

Multi-level Lists

1309. One
- 1309.1. Two
- 1309.1.1. Three
- 1309.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 1309.1.3. Five
1310. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Continued Lists

- mmdcxvii. One
- mmdcxviii. Two

An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.

- mmdcxix. We now resume our normal programming
- mmdcxx. Four

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1315. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1316. Two

Multi-level Lists

1315. One
- 1315.1. Two

1315.1.1. Three

1315.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

1315.1.3. Five

1316. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **"Add Books"** button and then click **"Convert"**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **"OK"**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

	One	Two	To the left is a table inside a table, with some cells merged.
	Three	Four	

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	11	12	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Multi-level Lists.....</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1323. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1324. Two

Multi-level Lists

1323. One
- 1323.1. Two

1323.1.1. Three

1323.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

1323.1.3. Five

1324. Six

8:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot ●. Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1329. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1330. Two

Multi-level Lists

1329. One
- 1329.1. Two
- 1329.1.1. Three
- 1329.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 1329.1.3. Five
1330. Six

13:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	11	12	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Table of Contents</i>	5
Images	7
Lists	8
<i>Bulleated List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1337. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1338. Two

Multi-level Lists

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Multi-level Lists.....</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1343. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1344. Two

Multi-level Lists

1343. One
- 1343.1. Two

1343.1.1. Three

1343.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

1343.1.3. Five

1344. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Continued Lists

mmdclxxxv. One

mmdclxxxvi. Two

An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.

mmdclxxxvii. We now resume our normal programming

mmdclxxxviii. Four

ⁱⁱ Endnotes are typically used for longer notes, they remain endnotes when converted into ebook form, except that they have an additional backlink to make it easy to return to the current position after reading the note.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E

23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1349. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1350. Two

Multi-level Lists

1349. One
 - 1349.1. Two
 - 1349.1.1. Three
 - 1349.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1349.1.3. Five

1350. Six

A Multi-level list with bullets:

- One

5:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **"Add Books"** button and then click **"Convert"**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **"OK"**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

	One	Two	To the left is a table inside a table, with some cells merged.
	Three	Four	

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	11	12	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Table of Contents</i>	5
Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1357. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1358. Two

Multi-level Lists

1357. One
 - 1357.1. Two
 - 1357.1.1. Three
 - 1357.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1357.1.3. Five
 1358. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Continued Lists

- mmdccxiii. One
- mmdccxiv. Two

An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.

- mmdccxv. We now resume our normal programming
- mmdccxvi. Four

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1363. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1364. Two

Multi-level Lists

1363. One
- 1363.1. Two

1363.1.1. Three

1363.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

1363.1.3. Five

1364. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four

14:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **"Add Books"** button and then click **"Convert"**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **"OK"**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1369. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1370. Two

Multi-level Lists

1369. One
- 1369.1. Two
- 1369.1.1. Three
- 1369.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 1369.1.3. Five
1370. Six

A Multi-level list with bullets:

- One

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	11	12	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Table of Contents</i>	5
Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1377. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1378. Two

Multi-level Lists

1377. One
- 1377.1. Two
- 1377.1.1. Three
- 1377.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 1377.1.3. Five
1378. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Continued Lists

- mmdccliii. One
- mmdccliv. Two

An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.

- mmdcclv. We now resume our normal programming
- mmdcclvi. Four

ⁱⁱ Endnotes are typically used for longer notes, they remain endnotes when converted into ebook form, except that they have an additional backlink to make it easy to return to the current position after reading the note.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in **inverse video**.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1383. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1384. Two

Multi-level Lists

1383. One
- 1383.1. Two

1383.1.1. Three

1383.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

1383.1.3. Five

1384. Six

A Multi-level list with bullets:

mmdcclxviii. Four

6:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1389. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1390. Two

Multi-level Lists

1389. One
- 1389.1. Two
- 1389.1.1. Three
- 1389.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 1389.1.3. Five

1390. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

10:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
<i>Undergraduate</i>			
Cedar University	110	103	+7
Oak Institute	202	210	-8
<i>Graduate</i>			
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

30 3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Table of Contents</i>	5
Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1397. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1398. Two

Multi-level Lists

1397. One
- 1397.1. Two
- 1397.1.1. Three
- 1397.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 1397.1.3. Five

1398. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

15:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1403. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1404. Two

Multi-level Lists

1403. One
 - 1403.1. Two

1403.1.1. Three

1403.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

1403.1.3. Five

1404. Six

18:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **"Add Books"** button and then click **"Convert"**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **"OK"**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

	One	Two	To the left is a table inside a table, with some cells merged.
	Three	Four	

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

ⁱⁱ Endnotes are typically used for longer notes, they remain endnotes when converted into ebook form, except that they have an additional backlink to make it easy to return to the current position after reading the note.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck-out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	11	12	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Table of Contents</i>	5
Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1411. One, with a very long line to demonstrate that the hanging indent for the list is working correctly

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot ●. Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a

floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1417. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1418. Two

Multi-level Lists

1417. One
 - 1417.1. Two
 - 1417.1.1. Three
 - 1417.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

7:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

Drop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5

pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1423. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1424. Two

Multi-level Lists

1423. One
- 1423.1. Two
- 1423.1.1. Three
- 1423.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8

	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

Drop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5

pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1431. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1432. Two

Multi-level Lists

1431. One
- 1431.1. Two
- 1431.1.1. Three
- 1431.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot ●. Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a

floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1437. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1438. Two

Multi-level Lists

1437. One
 - 1437.1. Two
 - 1437.1.1. Three
 - 1437.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

19:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

23	24	25	26	27	28	29
30	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of

limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in

ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1443. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1444. Two

Multi-level Lists

1443. One
 - 1443.1. Two
 - 1443.1.1. Three
 - 1443.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

- mmdccclxxxviii. Four

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **"Add Books"** button and then click **"Convert"**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **"OK"**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8

	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

Drop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5

pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1451. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1452. Two

Multi-level Lists

1451. One
 - 1451.1. Two
 - 1451.1.1. Three
 - 1451.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1451.1.3. Five

1452. Six

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot ●. Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a

floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1457. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1458. Two

Multi-level Lists

1457. One
 - 1457.1. Two
 - 1457.1.1. Three
 - 1457.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

13:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

Drop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5

pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1463. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1464. Two

Multi-level Lists

1463. One
- 1463.1. Two
- 1463.1.1. Three
- 1463.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 1463.1.3. Five

1464. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8

	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5

pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleted List</i>	<i>8</i>
<i>Numbered List</i>	<i>8</i>
<i>Multi-level Lists</i>	<i>8</i>
<i>Continued Lists</i>	<i>8</i>

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1471. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1472. Two

Multi-level Lists

1471. One
 - 1471.1. Two
 - 1471.1.1. Three
 - 1471.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot ●. Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a

floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1477. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1478. Two

Multi-level Lists

1477. One
 - 1477.1. Two
 - 1477.1.1. Three
 - 1477.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1477.1.3. Five
1478. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four

5:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

<i>Continued Lists</i>	<i>8</i>

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1483. One, with a very long line to demonstrate that the hanging indent for the list is working correctly

1484. Two

Multi-level Lists

1483. One

1483.1. Two

1483.1.1. Three

1483.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

1483.1.3. Five

1484. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8

	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

Drop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5

pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1491. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1492. Two

Multi-level Lists

1491. One
- 1491.1. Two
- 1491.1.1. Three
- 1491.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot ●. Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a

floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1497. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1498. Two

Multi-level Lists

1497. One
 - 1497.1. Two
 - 1497.1.1. Three
 - 1497.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1497.1.3. Five

17:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

Drop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5

pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1503. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1504. Two

Multi-level Lists

1503. One
- 1503.1. Two
- 1503.1.1. Three
- 1503.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
- 1503.1.3. Five

1504. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Continued Lists

mmmv. One

mmmvi. Two

An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.

mmmvii. We now resume our normal programming

mmmviii. Four

ⁱⁱ Endnotes are typically used for longer notes, they remain endnotes when converted into ebook form, except that they have an additional backlink to make it easy to return to the current position after reading the note.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8

	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

Drop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5

pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

- 1511. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
- 1512. Two

Multi-level Lists

- 1511. One
 - 1511.1. Two
 - 1511.1.1. Three
 - 1511.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1511.1.3. Five

- 1512. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

Continued Lists

- mmmxxi. One
- mmmxxii. Two

An interruption in our regularly scheduled listing, for this essential and very relevant public service announcement.

- mmmxxiii. We now resume our normal programming
- mmmxxiv. Four

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and ***intense emphasis***. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot ●. Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a

floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1517. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1518. Two

Multi-level Lists

1517. One
 - 1517.1. Two
 - 1517.1.1. Three
 - 1517.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1517.1.3. Five
1518. Six

A Multi-level list with bullets:

- One
 - Two
 - This bullet uses an image as the bullet item
 - Four
- Five

mmmxxxvi. Four

10:

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the **“Add Books”** button and then click **“Convert”**. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click **“OK”**.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1523. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1524. Two

Multi-level Lists

1523. One

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables

ITEM	NEEDED
Books	1
Pens	3
Pencils	2
Highlighter	2 colors
Scissors	1 pair

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8

	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	1 1	1 2	1 3	1 4	1 5
1 6	17	1 8	1 9	2 0	2 1	2 2
2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

rop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5 pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot ●. Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a

floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Tables in Word can vary from the extremely simple to the extremely complex. calibre tries to do its best when converting tables. While you may run into trouble with the occasional table, the vast majority of common cases should be converted very well, as demonstrated in this section. Note that for optimum results, when creating tables in Word, you should set their widths using percentages, rather than absolute units. To the left of this paragraph is a floating two column table with a nice green border and header row.

Now let's look at a fancier table—one with alternating row colors and partial borders. This table is stretched out to take 100% of the available width.

City or Town	Point A	Point B	Point C	Point D	Point E
Point A	—				
Point B	87	—			
Point C	64	56	—		
Point D	37	32	91	—	
Point E	93	35	54	43	—

Next, we see a table with special formatting in various locations. Notice how the formatting for the header row and sub header rows is preserved.

College	New students	Graduating students	Change
	<i>Undergraduate</i>		
Cedar University	110	103	+7
Oak Institute	202	210	-8
	<i>Graduate</i>		
Cedar University	24	20	+4
Elm College	43	53	-10
Total	998	908	90

Source: Fictitious data, for illustration purposes only

Next, we have something a little more complex, a nested table, i.e. a table inside another table. Additionally, the inner table has some of its cells merged. The table is displayed horizontally centered.

One	Two	To the left is a table inside a table, with some cells merged.
	Four	
Three		

We end with a fancy calendar, note how much of the original formatting is preserved. Note that this table will only display correctly on relatively wide screens. In general, very wide tables or tables whose cells have fixed width requirements don't fare well in ebooks.

December 2007

Su n	Mon	Tu e	We d	Th u	Fri	Sat
						1
2	3	4	5	6	7	8

2 3	24	2 5	2 6	2 7	2 8	2 9
3 0	31					

Structural Elements

Miscellaneous structural elements you can add to your document, like footnotes, endnotes, dropcaps and the like.

Footnotes & Endnotes

Footnotesⁱⁱ and endnotesⁱⁱ are automatically recognized and both are converted to endnotes, with backlinks for maximum ease of use in ebook devices.

Dropcaps

D

Drop caps are used to emphasize the leading paragraph at the start of a section. In Word it is possible to specify how many lines of text a drop-cap should use. Because of limitations in ebook technology, this is not possible when converting. Instead, the converted drop cap will use font size and line height to simulate the effect as well as possible. While not as good as the original, the result is usually tolerable. This paragraph has a “D” dropcap set to occupy three lines of text with a font size of 58.5

pts. Depending on the screen width and capabilities of the device you view the book on, this dropcap can look anything from perfect to ugly.

Links

Two kinds of links are possible, those that refer to an external website and those that refer to locations inside the document itself. Both are supported by calibre. For example, here is a link pointing to the [calibre download page](#). Then we have a link that points back to the section on [paragraph level formatting](#) in this document.

Table of Contents

There are two approaches that calibre takes when generating a Table of Contents. The first is if the Word document has a Table of Contents itself. Provided that the Table of Contents uses hyperlinks, calibre will automatically use it. The levels of the Table of Contents are identified by their left indent, so if you want the ebook to have a multi-level Table of Contents, make sure you create a properly indented Table of Contents in Word.

If no Table of Contents is found in the document, then a table of contents is automatically generated from the headings in the document. A heading is identified as something that has the Heading 1 or Heading 2, etc. style applied to it. These headings are turned into a Table of Contents with Heading 1 being the topmost level, Heading 2 the second level and so on.

You can see the Table of Contents created by calibre by clicking the Table of Contents button in whatever viewer you are using to view the converted ebook.

Images	7
Lists	8
<i>Bulleted List</i>	8
<i>Numbered List</i>	8
<i>Multi-level Lists</i>	8
<i>Continued Lists</i>	8

Images

Images can be of three main types. Inline images are images that are part of the normal text flow, like this image of a green dot . Inline images do not cause breaks

in the text and are usually small in size.

The next category of image is a floating image, one that “floats “ on the page and is surrounded by text. Word supports more types of floating images than are possible with current ebook technology, so the conversion maps floating images to simple left and right floats, as you can see with the left and right arrow images on the sides of this paragraph.

The final type of image is a “block” image, one that becomes a paragraph on its own and has no text on either side. Below is a centered green dot.

Centered images like this are useful for large pictures that should be a focus of attention.

Generally, it is not possible to translate the exact positioning of images from a Word document to an ebook. That is because in Word, image positioning is specified in absolute units from the page boundaries. There is no analogous technology in ebooks, so the conversion will usually end up placing the image either centered or floating close to the point in the text where it was *inserted*, not necessarily where it appears on the page in Word.

Lists

All types of lists are supported by the conversion, with the exception of lists that use fancy bullets, these get converted to regular bullets.

Bulleted List

- One
- Two

Numbered List

1531. One, with a very long line to demonstrate that the hanging indent for the list is working correctly
1532. Two

Multi-level Lists

1531. One
 - 1531.1. Two
 - 1531.1.1. Three
 - 1531.1.2. Four with a very long line to demonstrate that the hanging indent for the list is working correctly.
 - 1531.1.3. Five

1532. Six

Demonstration of DOCX support in calibre

This document demonstrates the ability of the calibre DOCX Input plugin to convert the various typographic features in a Microsoft Word (2007 and newer) document. Convert this document to a modern ebook format, such as AZW3 for Kindles or EPUB for other ebook readers, to see it in action.

There is support for images, tables, lists, footnotes, endnotes, links, dropcaps and various types of text and paragraph level formatting.

To see the DOCX conversion in action, simply add this file to calibre using the “**Add Books**” button and then click “**Convert**”. Set the output format in the top right corner of the conversion dialog to EPUB or AZW3 and click “**OK**”.

Text Formatting

Inline formatting

Here, we demonstrate various types of inline text formatting and the use of embedded fonts.

Here is some **bold**, *italic*, ***bold-italic***, underlined and ~~struck out~~ text. Then, we have a super^{script} and a sub_{script}. Now we see some red, green and blue text. Some text with a yellow highlight. Some text in a box. Some text in inverse video.

A paragraph with styled text: *subtle emphasis* followed by **strong text** and *intense emphasis*. This paragraph uses document wide styles for styling rather than inline text properties as demonstrated in the previous paragraph — calibre can handle both with equal ease.

Fun with fonts

This document has embedded the Ubuntu font family. The body text is in the Ubuntu typeface, here is some text in the Ubuntu Mono typeface, notice how every letter has the same width, even i and m. Every embedded font will automatically be embedded in the output ebook during conversion.

Paragraph level formatting

You can do crazy things with paragraphs, if the urge strikes you. For instance this paragraph is right aligned and has a right border. It has also been given a light gray background.

For the lovers of poetry amongst you, paragraphs with hanging indents, like this often come in handy. You can use hanging indents to ensure that a line of poetry retains its individual identity as a line even when the screen is too narrow to display it as a single line. Not only does this paragraph have a hanging indent, it is also has an extra top margin, setting it apart from the preceding paragraph.

Tables
