\* estimation  
 \* lancement des nouvelles circulations : pas de comptages pour la sem 19  
 \*\* semaines 18 et 22 : jeudi férié = circulations du samedi (JOB = sem précédente, samedi calculé /t au dimch)

Les résultats anormalement bas des semaines 18, 19 et 22 s'expliquent certainement par les données reconstituées à partir de données partielles avec un jeudi férié = samedi (il serait préférable d'avoir sur ce type de semaine les données de haute JOB, ici donc le mardi)
