## Step 1

setup of LO options, mouse, select center the mouse on the middle of dialog box OR on the default button

example with print dialog,

- 1) the mouse comes 1<sup>st</sup> on the selected location on step1
- 2) click on what you need, for example "ok", "cancel", ...
- 3) the mouse springs on the selected location on step1
- 4) click a 2<sup>nd</sup> time on what you need and it's ok.

The problem occurs randomly on the  $1^{\text{st}}$  click, the  $2^{\text{nd}}$  click is always successfull
