

SVG picture inserted without scaling inside Writer

SVG picture inserted with scaling in Writer

I do often encounter problems with the PDF file exported from a LibreOffice document when the document contains the SVG picture **Logo01÷tekst.svg** inserted here in the document as a picture.

It is nice that a SVG (Scaleable Vector Graphics) picture inserted in a LibreOffice persists as a vector graphics inside the PDF document exported by LibreOffice.

The SVG file **Logo01÷tekst.svg** has been checked with the W3C validator located at [http://validator.w3.org/#validate\\_by\\_upload](http://validator.w3.org/#validate_by_upload) and passes the check although with a few warnings.

However part of the SVG picture is often missing in the PDF file created by by LibreOffice.
