

Bug Explanation

First I converted this **ePub**([http://173.12.216.233:8888/get/EPUB/Diana Gabaldon-An Echo in the Bone_749.epub](http://173.12.216.233:8888/get/EPUB/Diana_Gabaldon-An_Echo_in_the_Bone_749.epub)) to **HTMLZ** using **calibre**. Then I inserted the `index.html` (inside the **HTMLZ**) into the **Writer**. Then I tried to remove the sections. But everytime I do so, **Writer** crashes.

This has been happening with other documents as well. Following is an image explaining the situation:

I have noticed that it doesn't crash if the document has sections that are structured like:

- Section 1
 - SubSection 2

But it *always* crashes if a section has a subsection which has another subsection(*outlined in the image*):

- Section 1
 - SubSection 2
 - SubSection 3

Please take a look at this.

Thanks.
