

Changing of value in one field resets rowcount to '0' in form-control "navigationbar" and resets rowcount in toolbar "navigationbar" to '1'

A screenshot of a web form with three input fields: "ID" containing "3", "firstname" containing "Egon", and "lastname" containing "Prince". Below the fields is a toolbar with a search icon, a dropdown menu showing "Datensatz 3 von 3", and several navigation icons. Below the toolbar is a navigation bar with a search icon, a dropdown menu showing "Datensatz 3 von 3", and several navigation icons.

Form before changing any value in a control.

A screenshot of the same web form. The "ID" field still contains "3", but the "firstname" field now contains "Ego". The "lastname" field contains "Prince" and is highlighted with a blue border. The toolbar below shows the dropdown menu now displaying "Datensatz 0 von 3". The navigation bar below shows the dropdown menu displaying "Datensatz 1 von 3".

Form after changing field "firstname" and moving to "lastname". Formcontrol "navigationbar" shows '0', toolbar shows '1'. Both have to show '3' as the screenshot above shows.
