

Below the Draw document is inserted in Writer. The reason for doing this is I am writing a chemistry textbook and I need the flexibility of Maths to input complex text into a drawing as part of many scientific diagrams. The complete Draw graphic is then copied (control-C) and then pasted special (shift-control-V) as a GDI metafile into Writer. They both look OK on screen within Writer or Draw or indeed Maths. BUT when the Writer document is exported PDF which is required by my publisher, then the second Maths does not have the correct modulus or absolute signs.

|M/M|

This is Maths in Draw written as
" $\left| \frac{M}{M} \right|$ " in Arial 9 point

⌈M/M⌋

This is Maths in Draw written as
 $\left\lceil \frac{M}{M} \right\rceil$ in Arial 9 point
