Depending on the purpose, we may need to export in different layouts:
- **Slides**   If the content is detailed, the Slide view provides the best readability.
- **Outline**   To print the outline of the presentation and share it with others for approval/editing
- **Notes**   Print and distribute as manual for the presentation
- **Handout**   Pront and give to students to make their own notations on each slide.

Therefore, add a section that allows the user to export more than one layouts (as shown above).

The export dialog has some options that are relevant for Writer/Calc; not Impress. Remove them.

Allow to Resize the Slide in The Notes Page Layout

Slow Death of a Lake

Healthy lake

Algae

Hyacinth

Bog (marsh)

grassland

Often the slide contains detailed text.
At default size, the text is not readable.
The best solution is to increase the size of the slide.
Allow us to resize the slide image.

While this notes pane can be resized and moved, the image above cannot be resized.
