Custom tab positions work correct with usual text.

```
T      T      T      T      T      T      T      T      (default TABS)
T  T        T            T        T        T        T        T      (custom TABS)
```

If numbering is selected, then unexpected tab stop appears (see 2.). It's marked with symbol **U**.
Look at Format→Paragraph->Tabs.

```
1.     T      T      T      T      T      T      T      T      (default TABS with numbering)
2.  T  **U** T        T        T  T        T        T        T        T      (custom TABS with numbering)
```

Move first tab position in the paragraph settings to the right, make it longer. but another
unnecessary tab position appears before user-defined tab. Unnecessary tab marked as **U**.
With first short tab, all works as expected (see 5.)

```
3.      T      T      T      T      T      T      T      (default TAB with numbering)
4.       **U** T    T      T      T      T      T      T      (first long custom TAB with numbering)
5.  T  T      T      T      T      T      T      T      (first short custom TAB with numbering)
6.      T      T      T      T      T      T      T      (first  TAB is almost default)
```

Here first tab stop is made just a little bit longer than default tab stop. If you look closer, custom
stop is ignored and symbol is placed at default tab stop. The problem tab is marked as **T**.

```
7.      **T**      T      T      T      T      T      T      (first  TAB is almost default)
```
