Big report LibreOffice 5.1.6.2

Line feed lost in label texts of imported graphics after modification or translation

Befor, see third column, was imported from Calc with a label text on 2 lines :

No symbol of the line feed in the cell of the data table dialog box. No icon to add one.

After any text modification in this text in the data table dialog box : without line feeds the graph automaticaly shrinks. No way to recover the line feed or I have to redo all the graphic from start. Some graphics look worse...

Thank you Regards,

M. pineau 2016.12.26
