

Bug 1053890 - [UX] define user-experience when downloads are detected as malware

Prepared by Sevaan Franks and the Firefox UX team

Introduction

Firefox uses Google's Safe Browsing tool to identify unsafe websites and notify users so they can protect themselves from harm. The service allows us to flag malicious downloads that can hurt users computers.

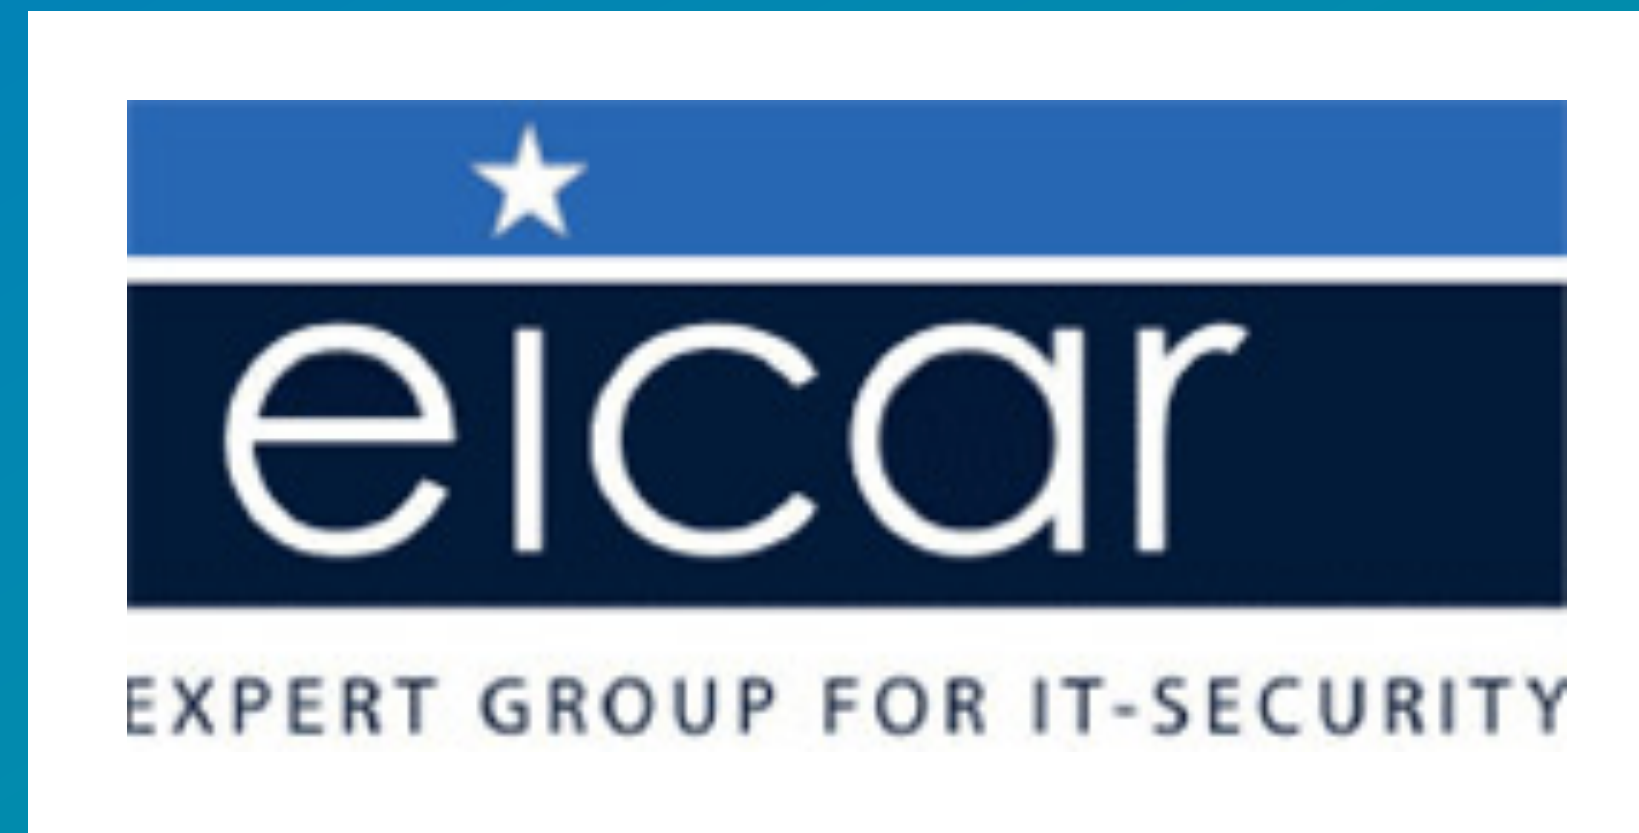

Now the Safe Browser program has expanded to also flag any “Potentially Unwanted” and “Uncommon” downloads that may be dangerous to users.

The work in this document shows a revised UX for malicious files, and introduces how potentially unwanted files should be handled as well.

Note: Testing Malware Downloads

The European Institute for Computer Antivirus Research (EICAR) and Computer Antivirus Research Organization (CARO) have developed a test file to trigger malware alerts which can be downloaded here: <http://www.eicar.org/85-0-Download.html>

Instead of using real malware, which could do real damage, this test file allows people to test anti-virus software without having to use a real computer virus.

Current State

If a user downloads a file that contain malware, Firefox blocks the file and displays the following error message in the downloads panel/window:

Right-clicking on the file allows a user to remove the item from their history, go to the download page, copy the download link, and clear the entire list of downloads.

Problems:

- We don't educate/inform the user as to why a download was blocked
- We don't offer a way to unblock the file

Design Principles

Earn and keep my trust

Look legitimate and polished

Perceived trustworthiness is just as important

Minimize scare tactics

Provide measured facts instead

Protect me upfront

If it keeps me safe, you don't need my permission

Help me make a thoughtful decision

Use consistent emotional cues

Positive cues emphasize safety, while negative ones, danger

Make safe choices easier to select

Make it harder to put myself at risk

Lower the impact of making mistakes

Reduce the pressure of making the "right" choice right now

Respect my time and task

Focus on the impact to my task

Spend less time explaining the technical issue

Flag threats; don't assume I notice

The absence of positive indicators isn't enough

Avoid interrupting me

Wait until I'm done or choose a safe default

Offer control without harming me

When I have no choice, explain why

Helping me understand stills gives me some control

Make the effect of each option clear

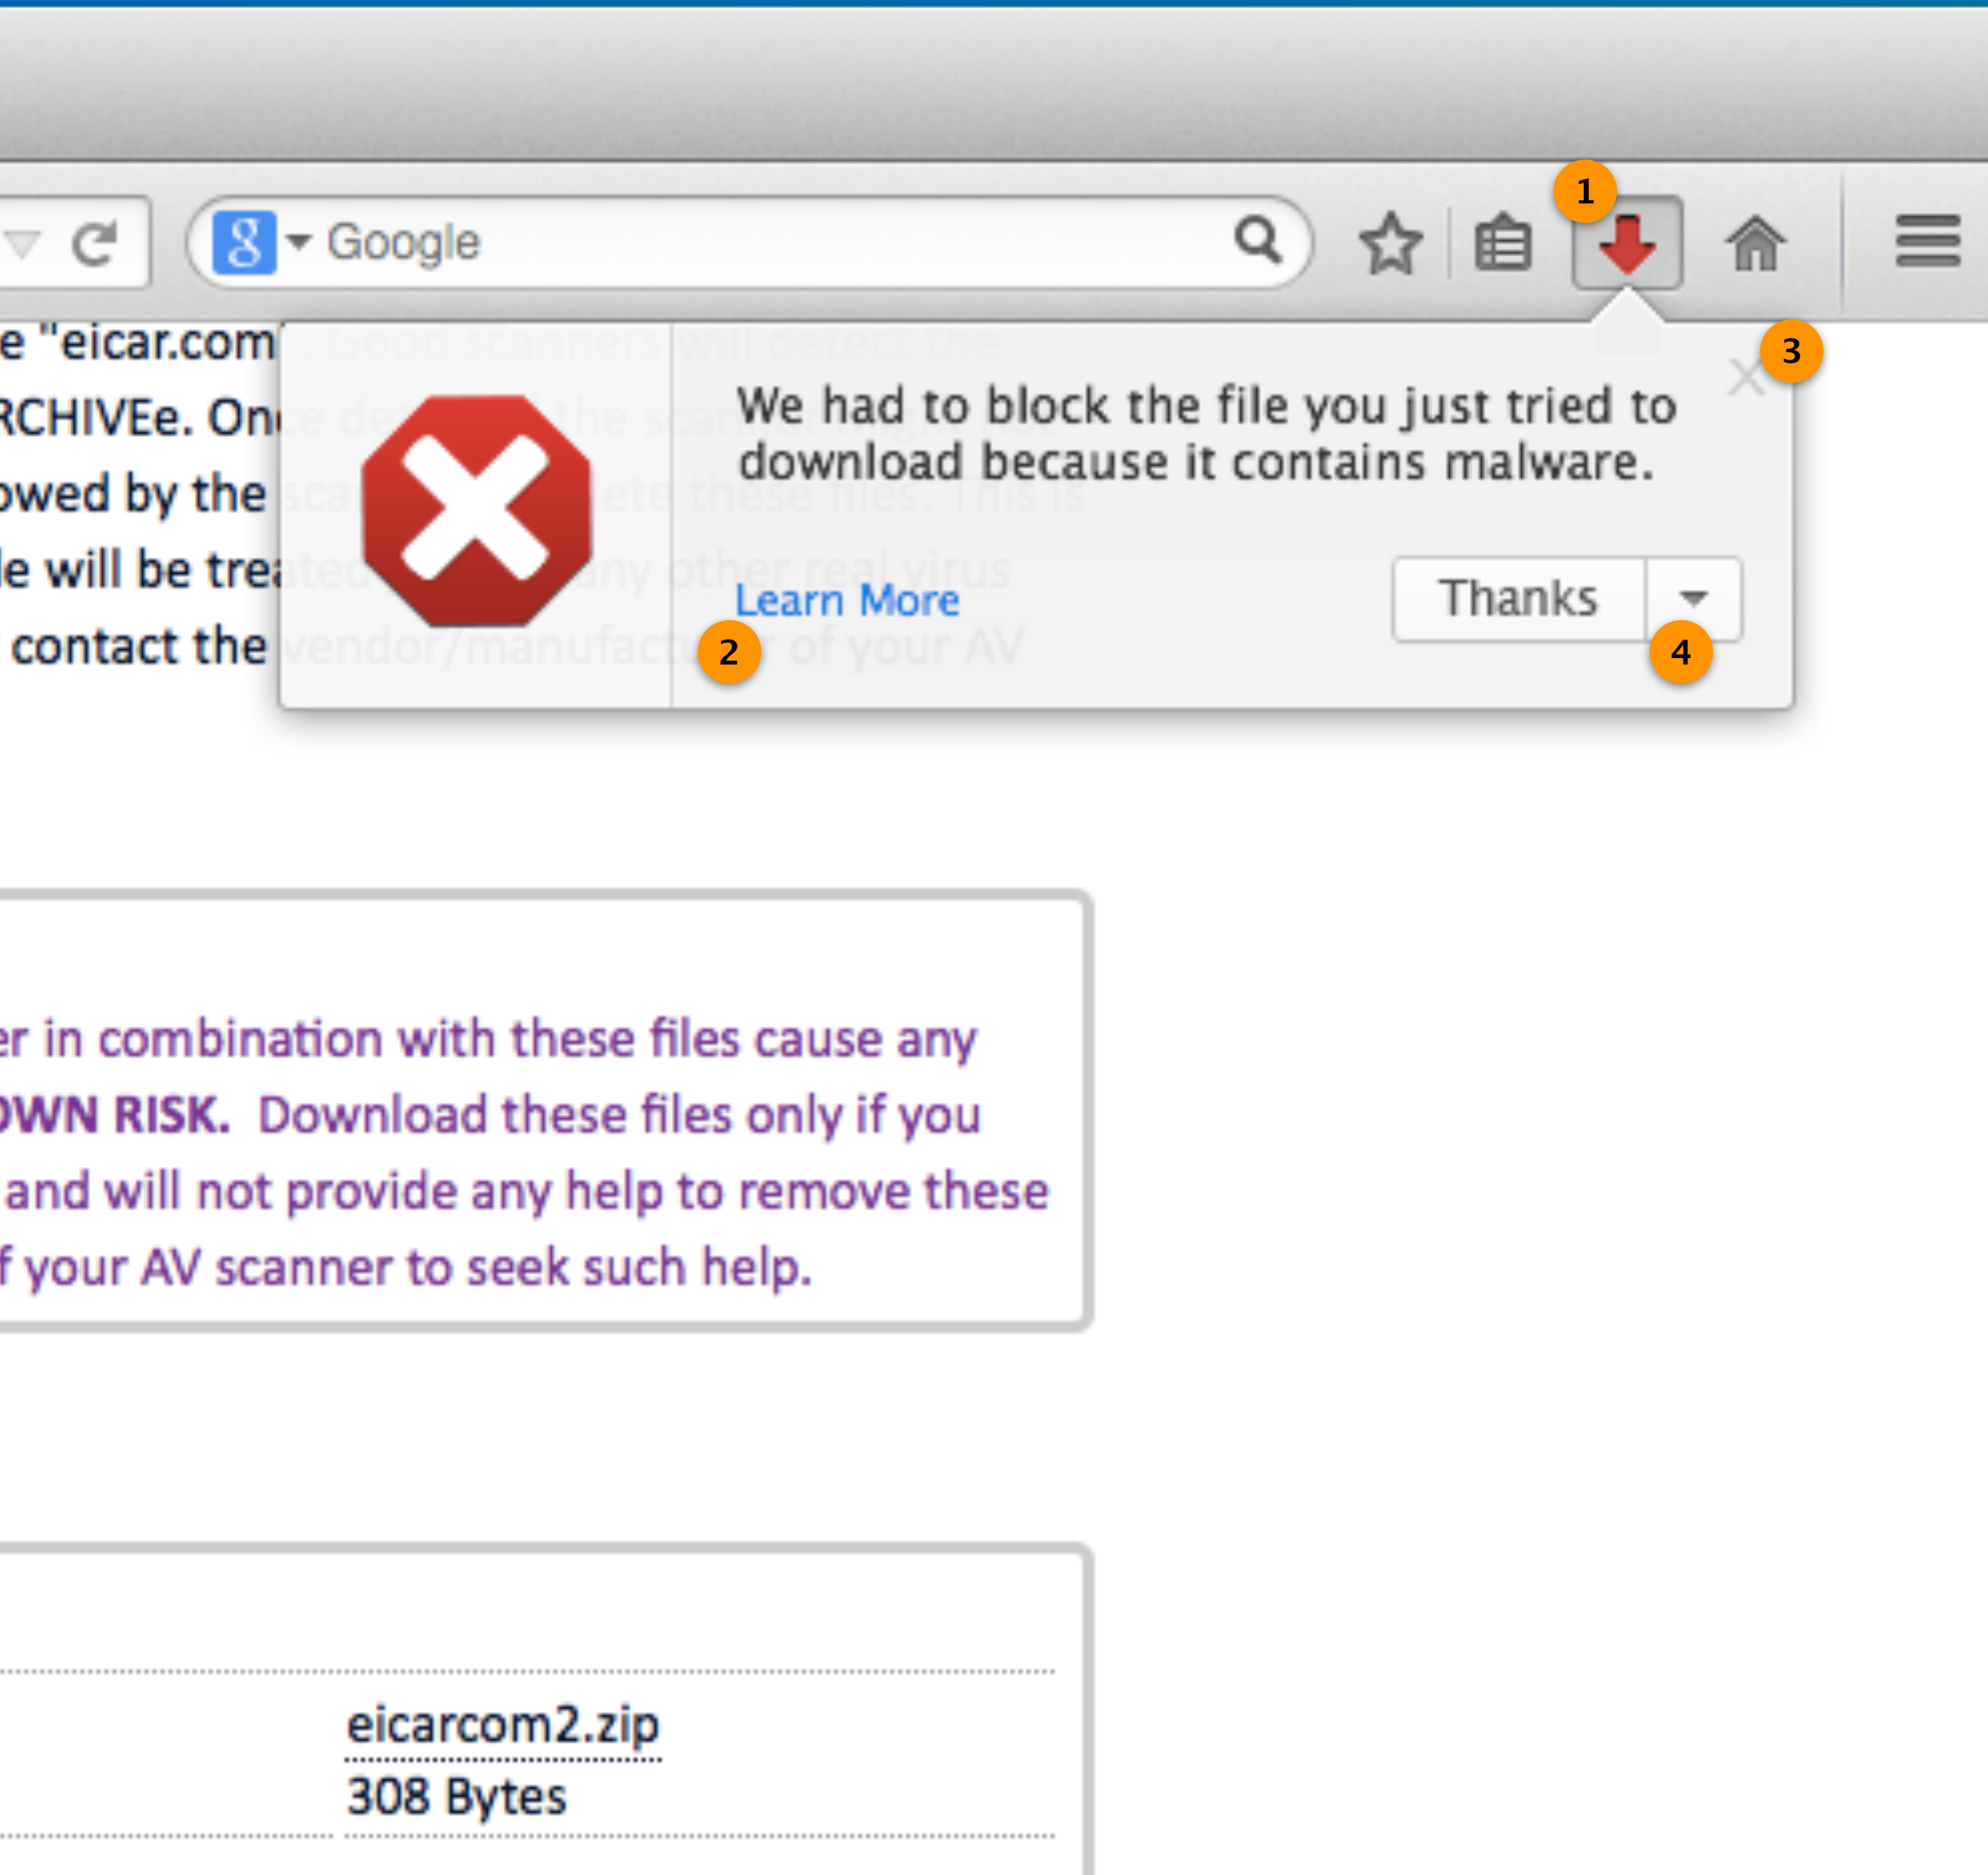

Novices want guidance, not a control panel

Give Pros configurable controls

Technical users want precision and flexibility

Suggested Changes

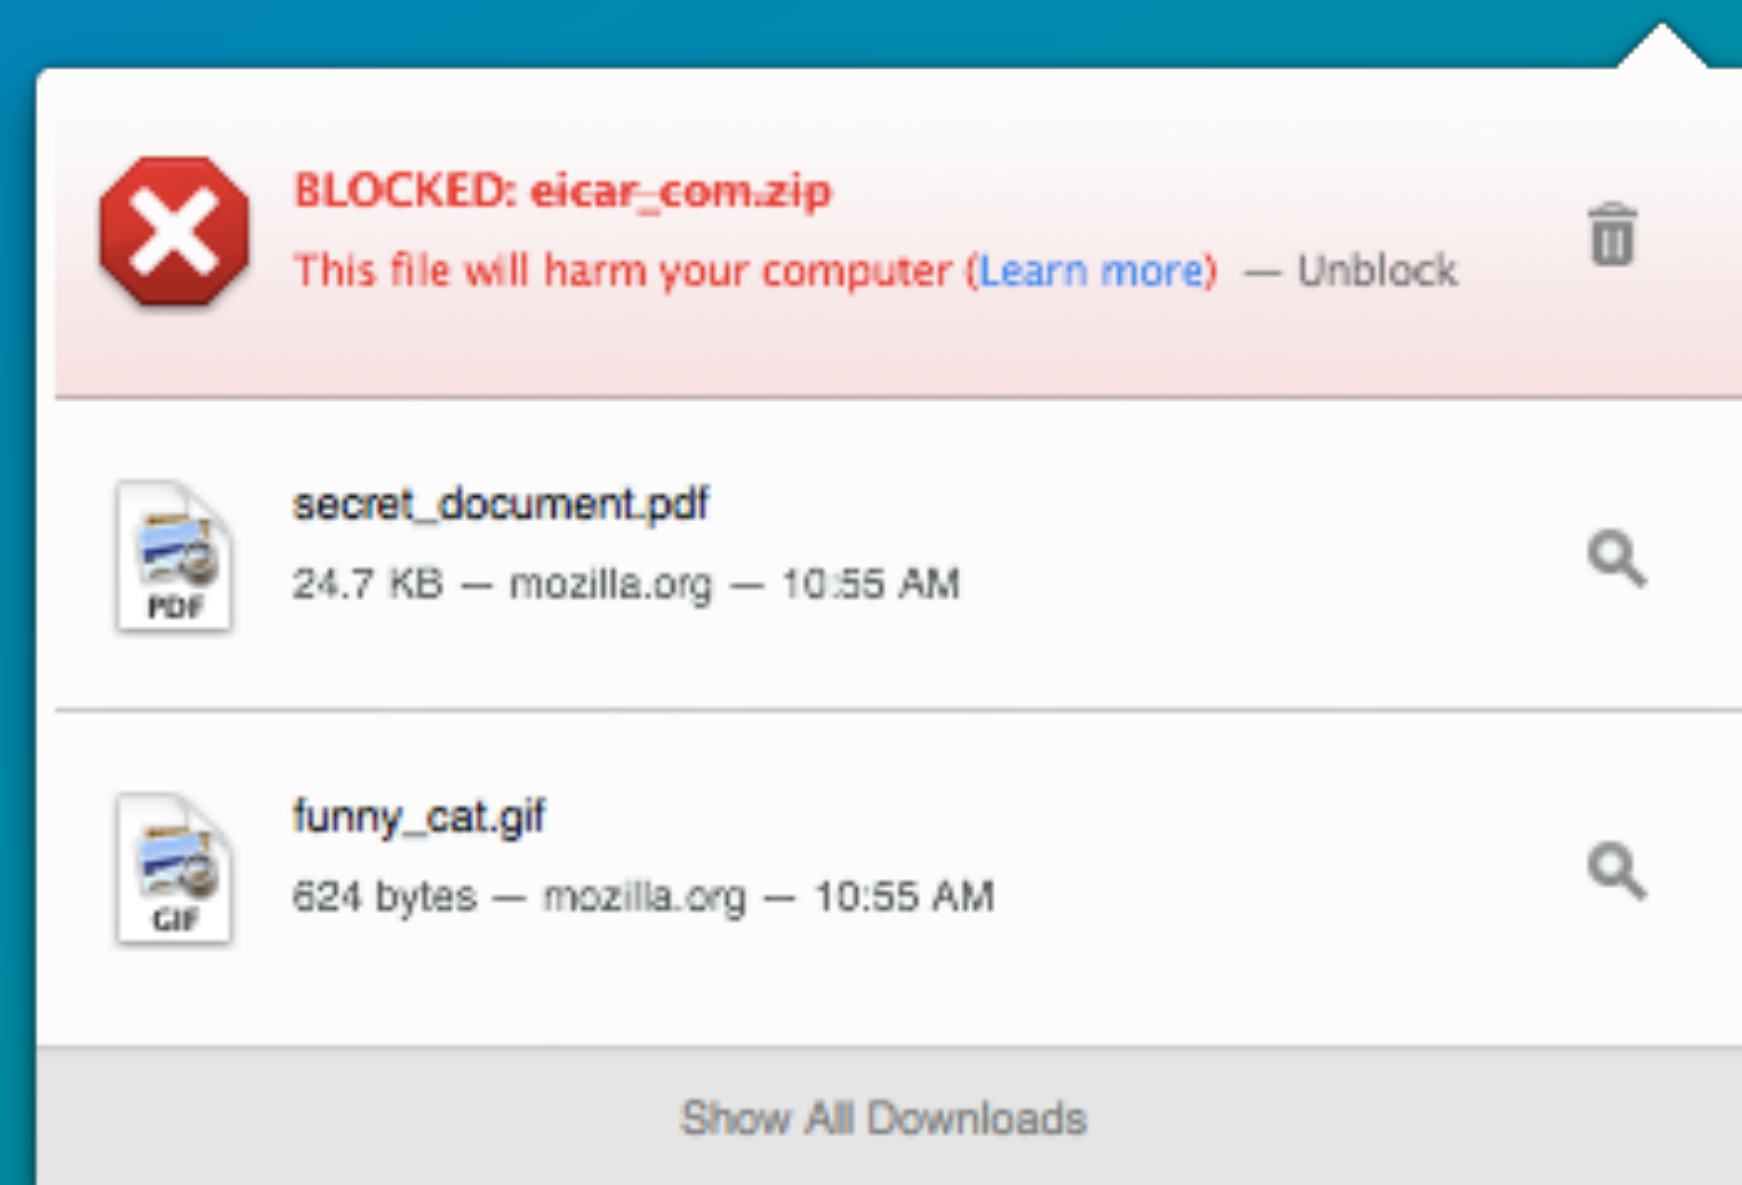

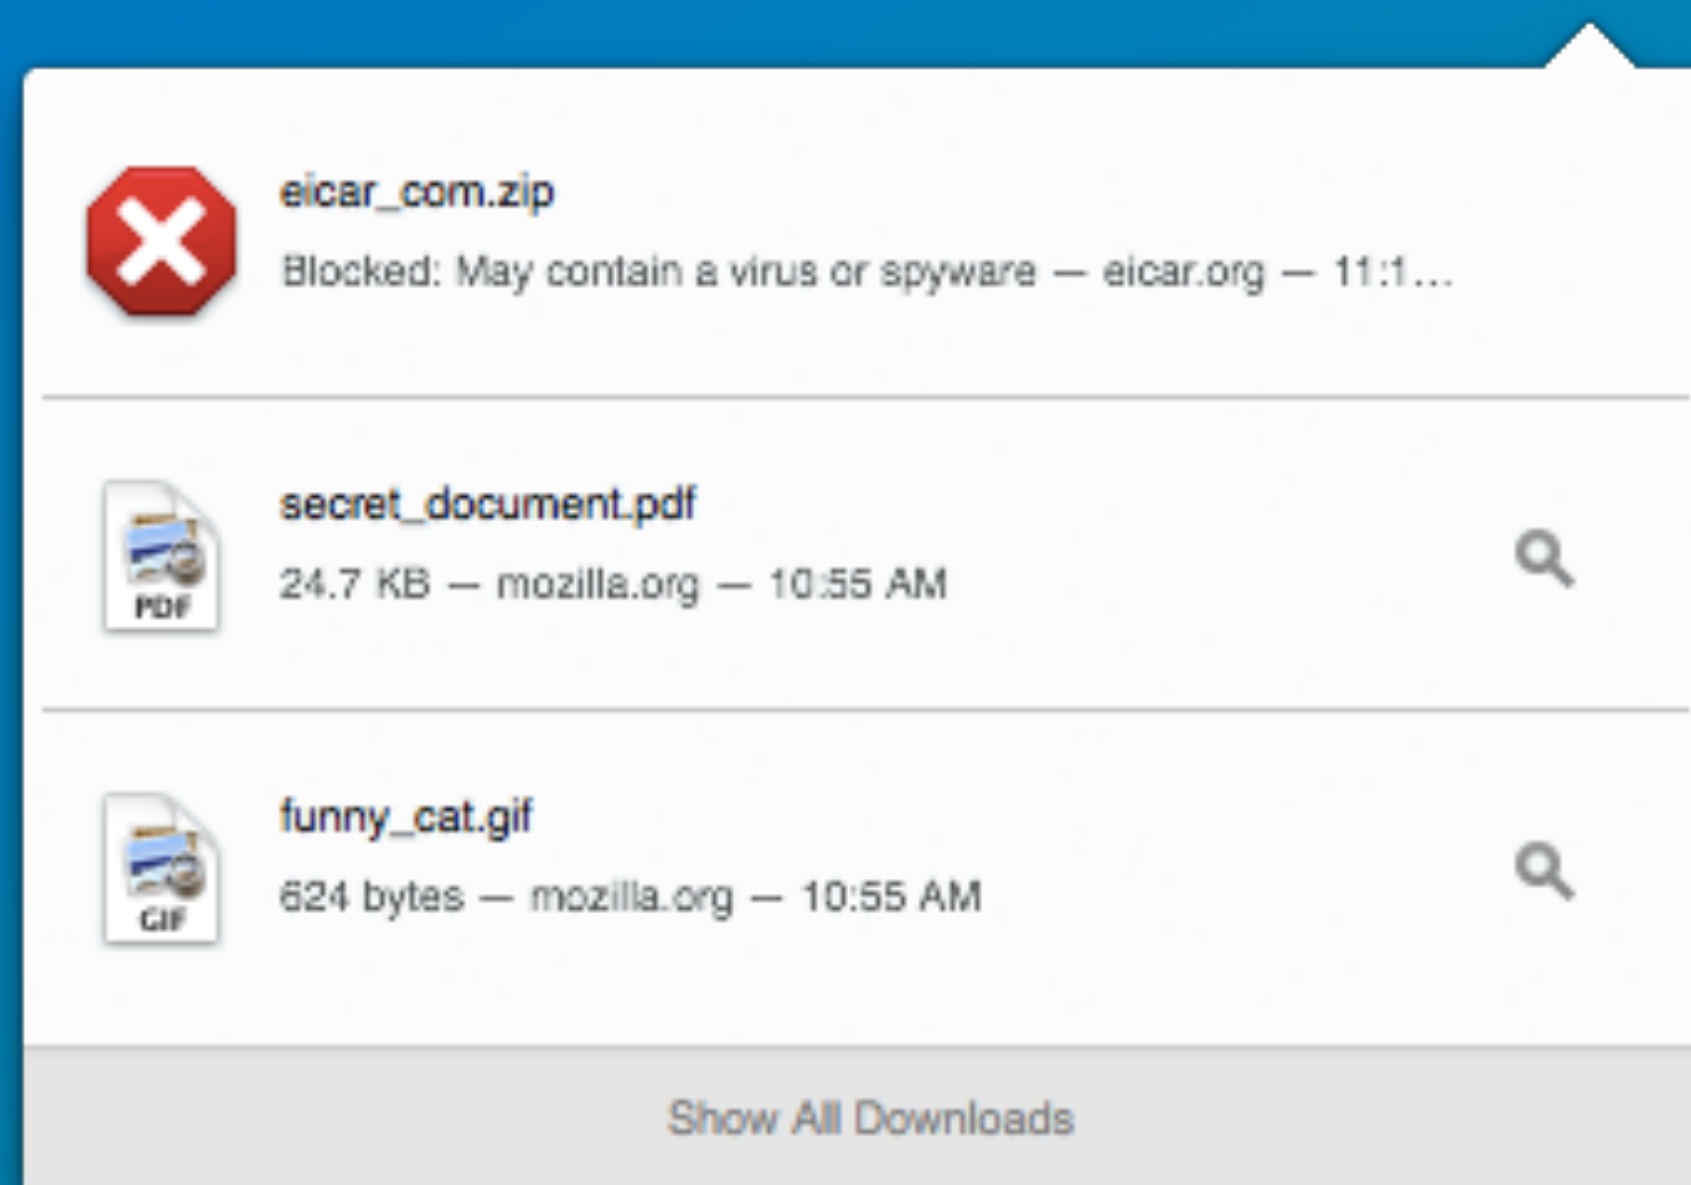

- When a download is blocked for containing malware, a doorhanger appears to alert the user.
 - Currently, the user has no way of knowing a download was blocked until they go to open the file, at which point it is a surprise. The user should be informed right away.
- A “Learn More” link in the doorhanger should take users to a page which explains why/how we handle malware blocking in Firefox.
- Highlight Downloads toolbar button red to indicate there is a contained alert.
- In the downloads panel the user should have a more apparent way to quickly delete the offending file.
- In the downloads panel the user should be able to “unblock” the malicious download.
 - This prompts a modal dialog the user must acknowledge which warns of the ramifications of “unblocking” the file.

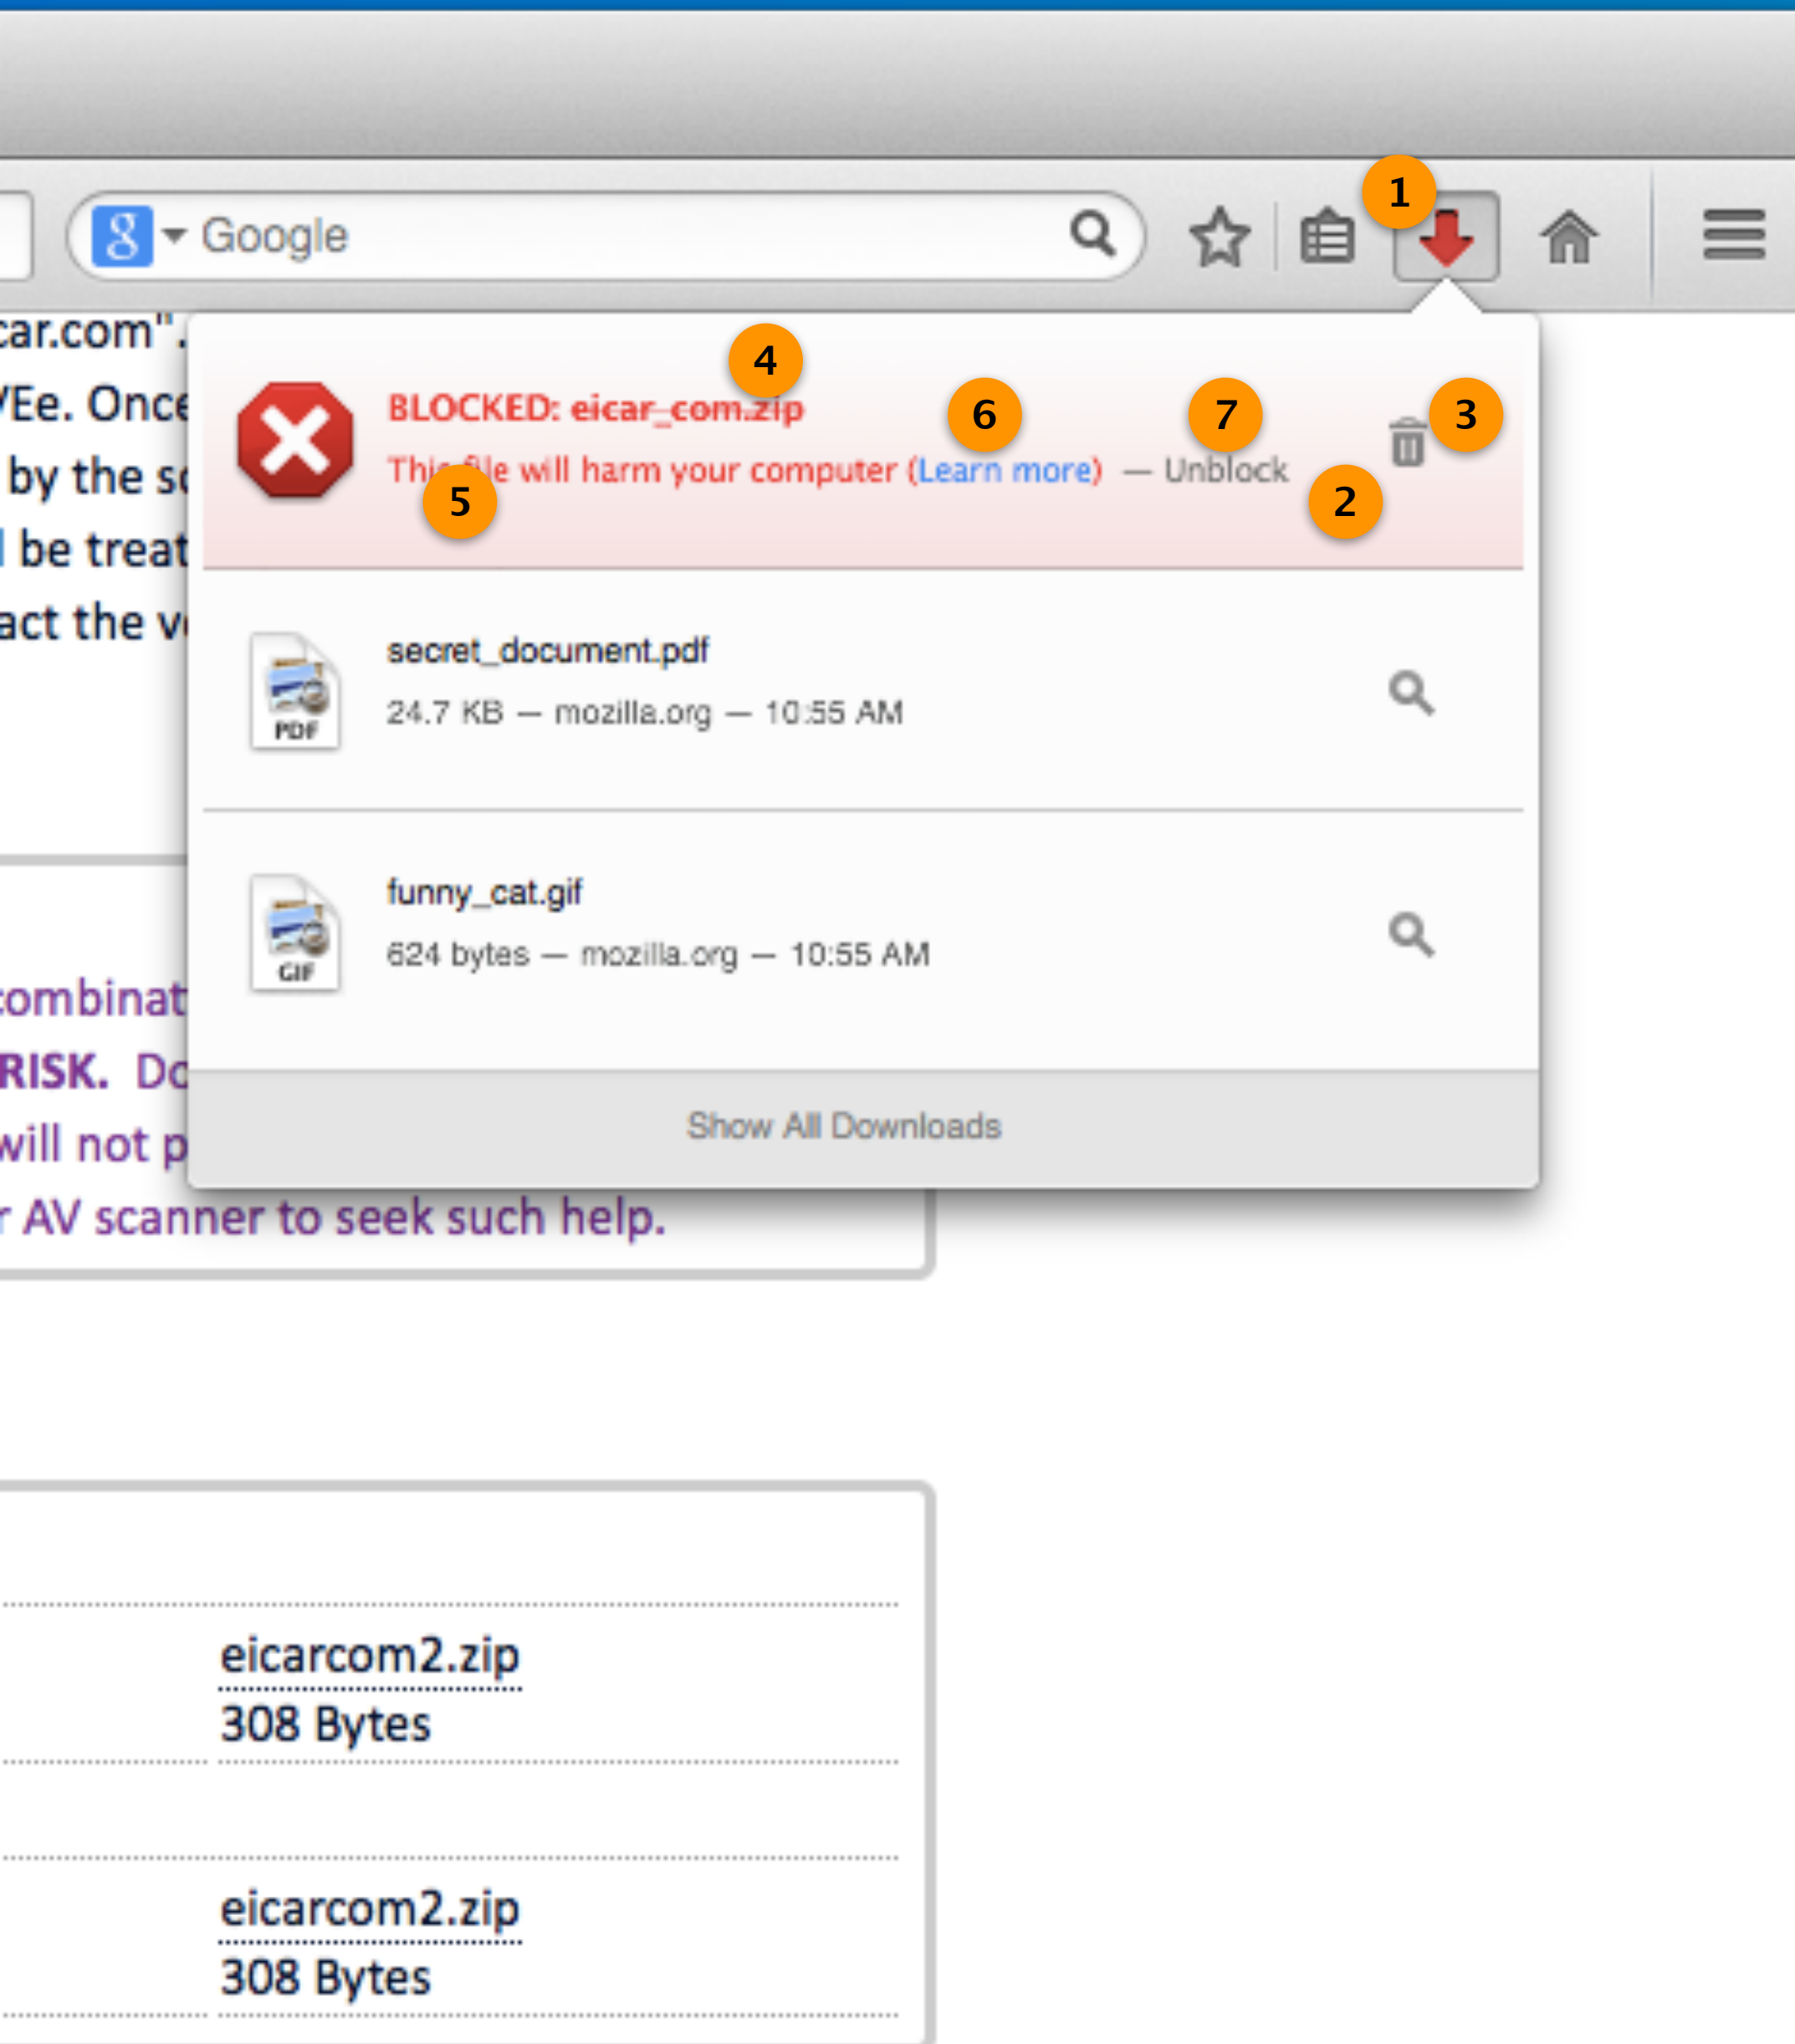

1. Icon turns red and pulses once when there is a malicious download in the list.
2. “Learn more” takes user to Mozilla help page regarding malicious and potentially unwanted downloads.
3. Dismisses doorhanger.
4. Dismisses doorhanger and opens download panel.
 - Sub-option: “Don’t show me this alert again”

Malicious Files in Download Panel (Before/After)

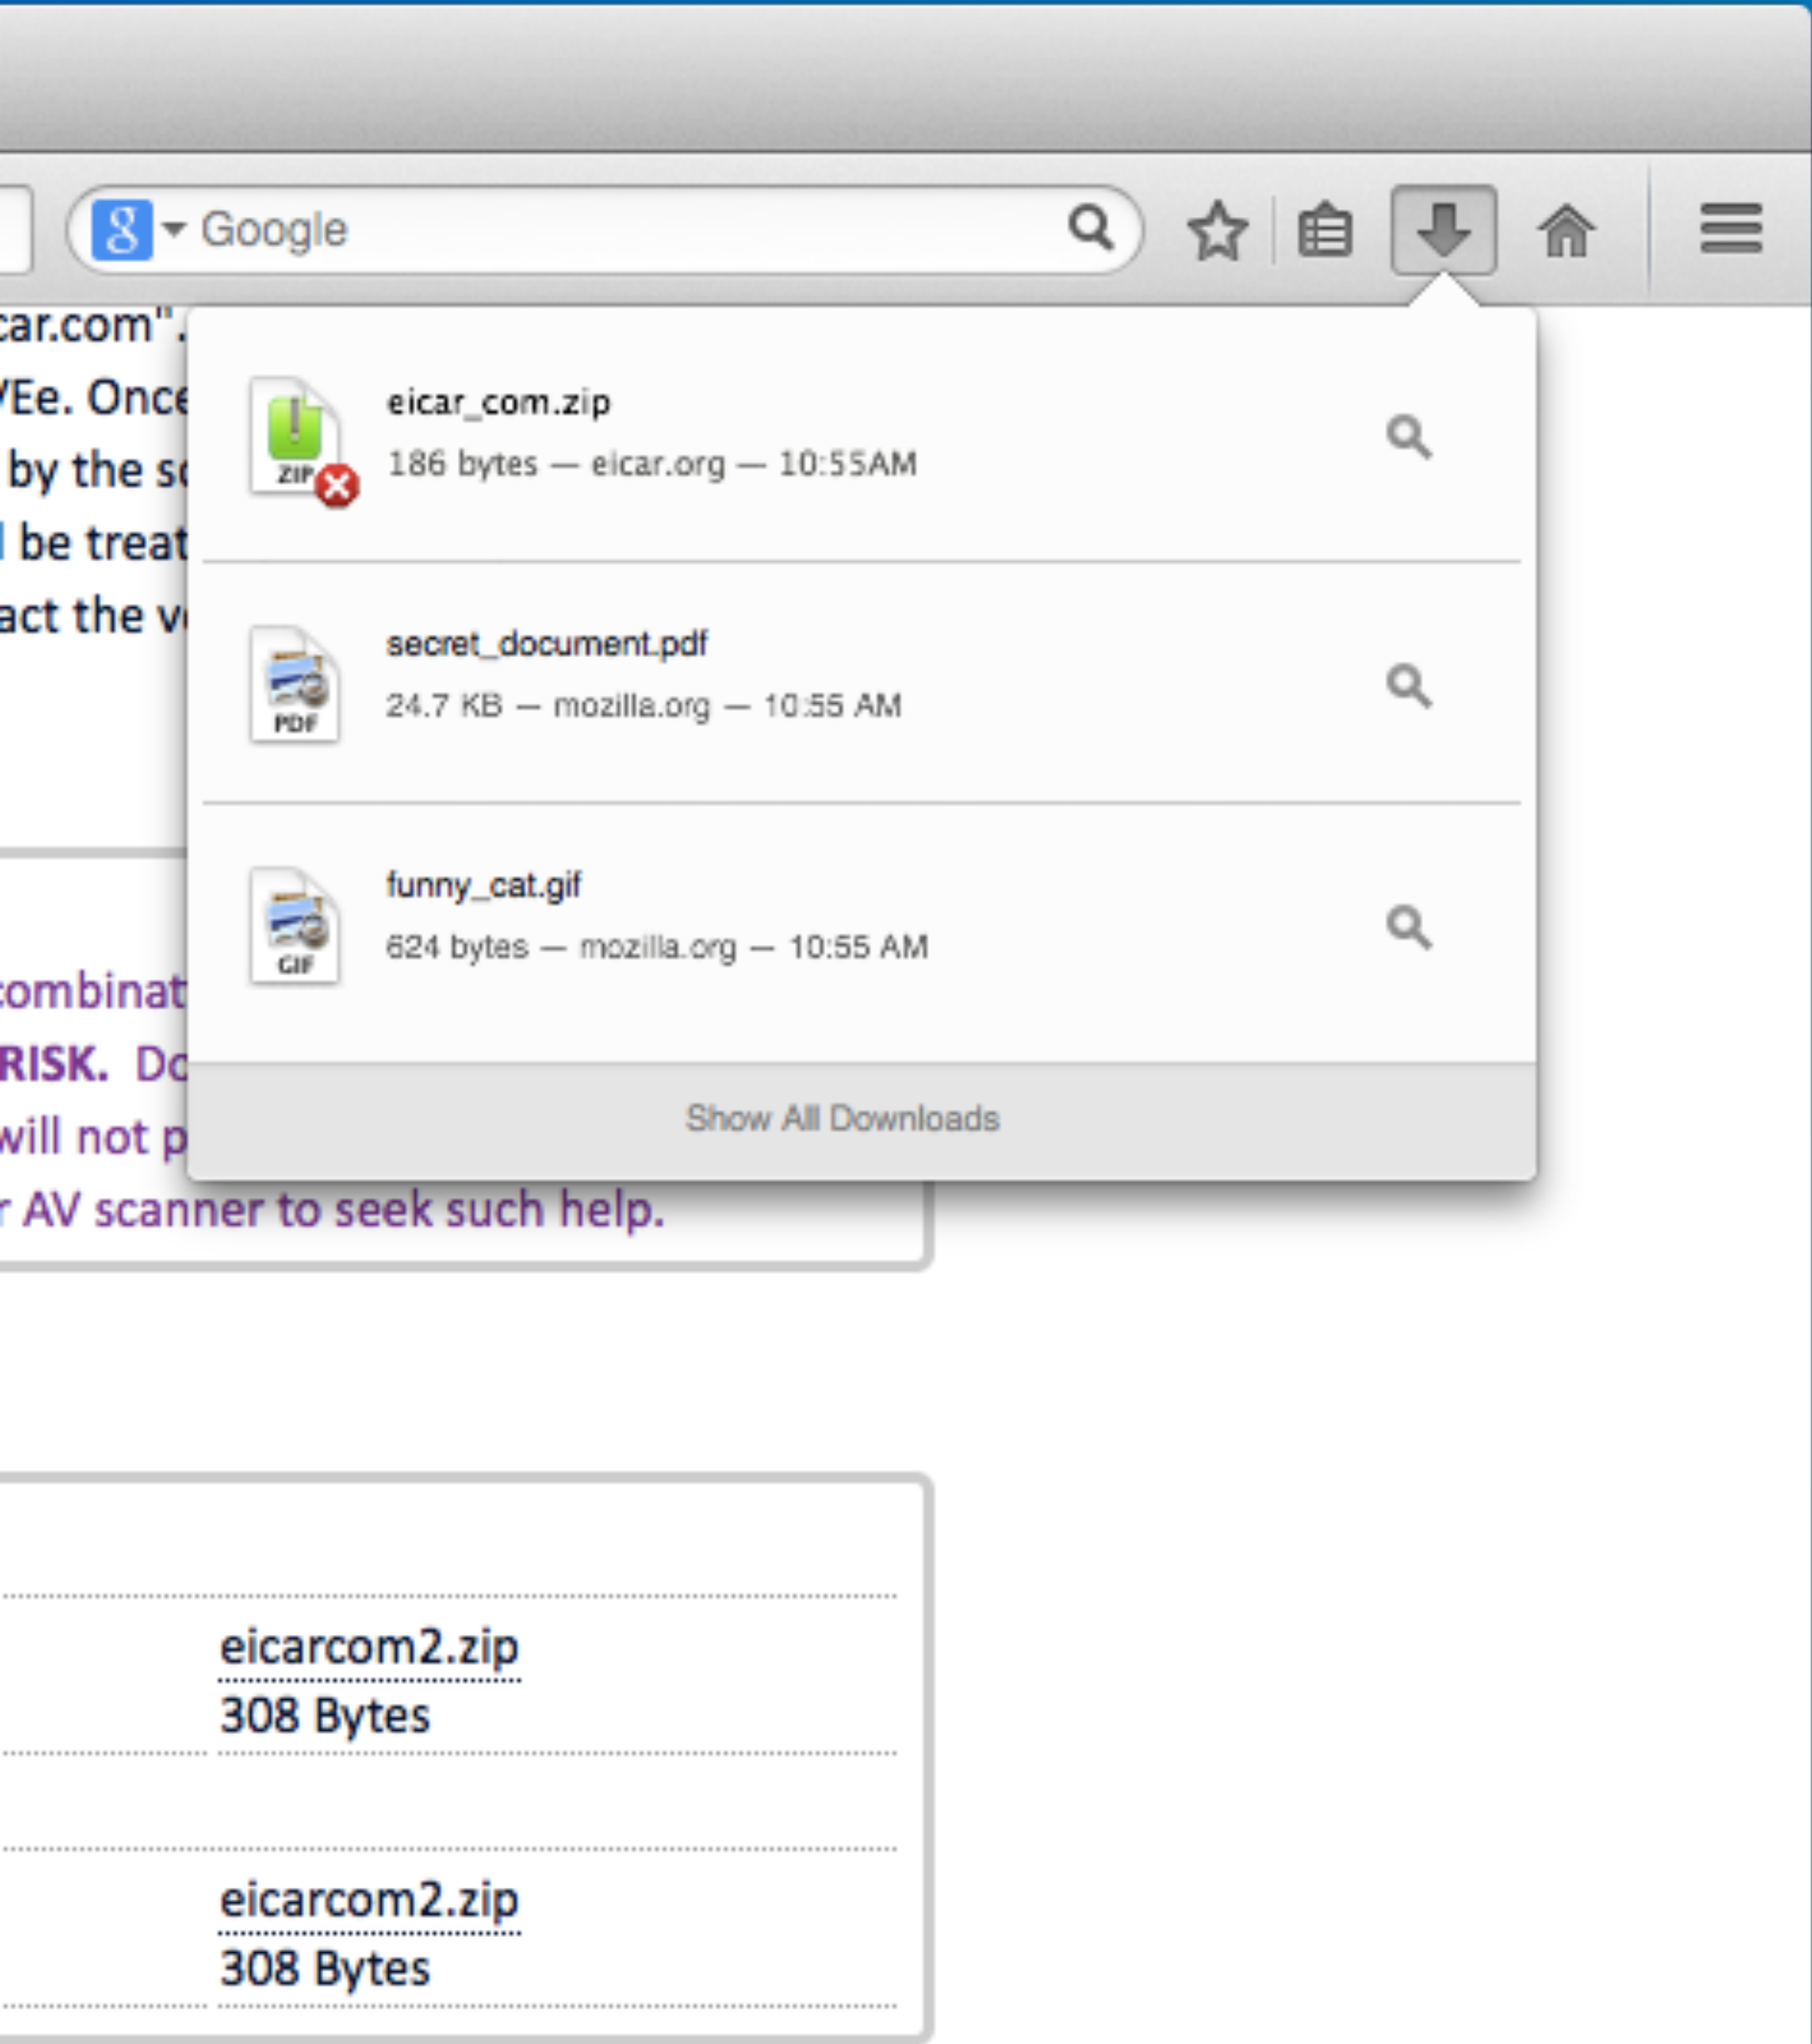

mozilla

1. Icon turns red and pulses when there is a malicious download in the list.
2. Red gradient draws eye and indicates the dangerous nature of the file.
3. Trash can icon allows user to quickly dispose of offending file.
4. File name is struck through, emphasizing that it is blocked.
5. Clear messaging: "This file will harm your computer"
6. "Learn more" takes user to Mozilla help page regarding malicious and potentially unwanted downloads.
7. Unblock link underlines on mouseover and triggers modal popup confirmation

Unblocked Malicious Files in Download Panel

When a user unblocks a malicious file, the download icon is no longer highlighted red and the row in the download panel changes format to look like a normal download.

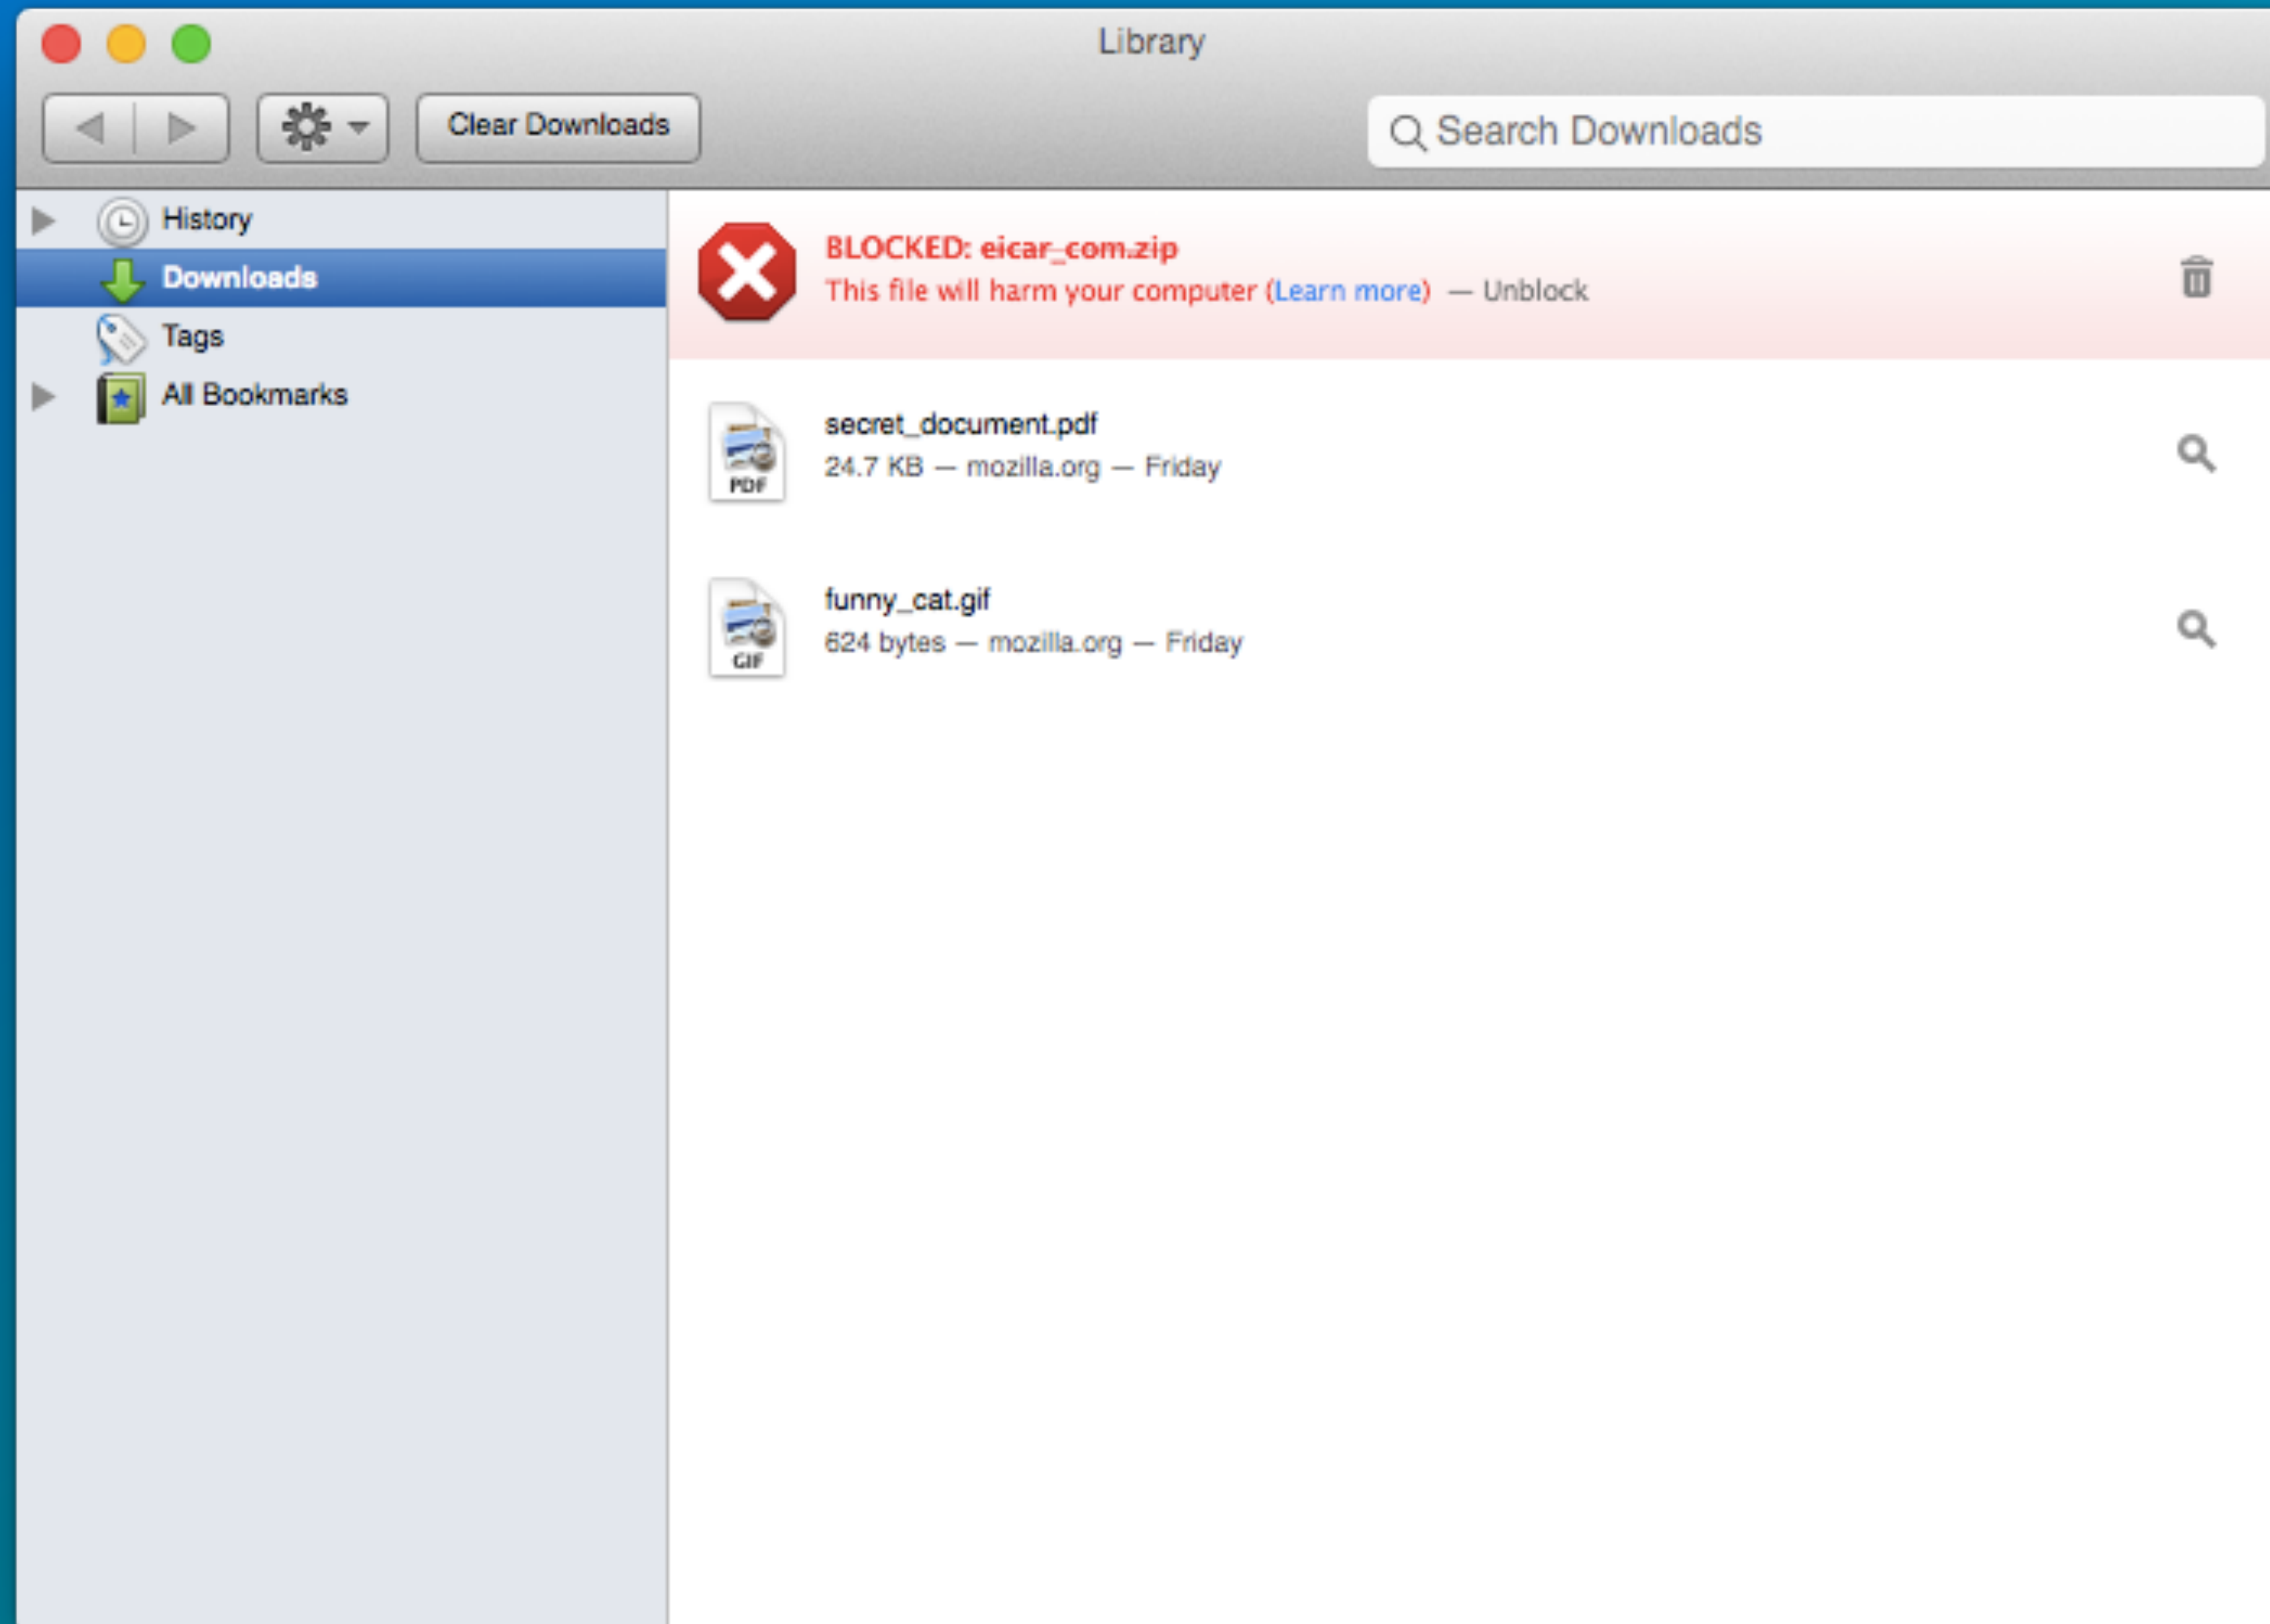

The only addition is a badge on the download icon which indicates to the user that the download was previously flagged.

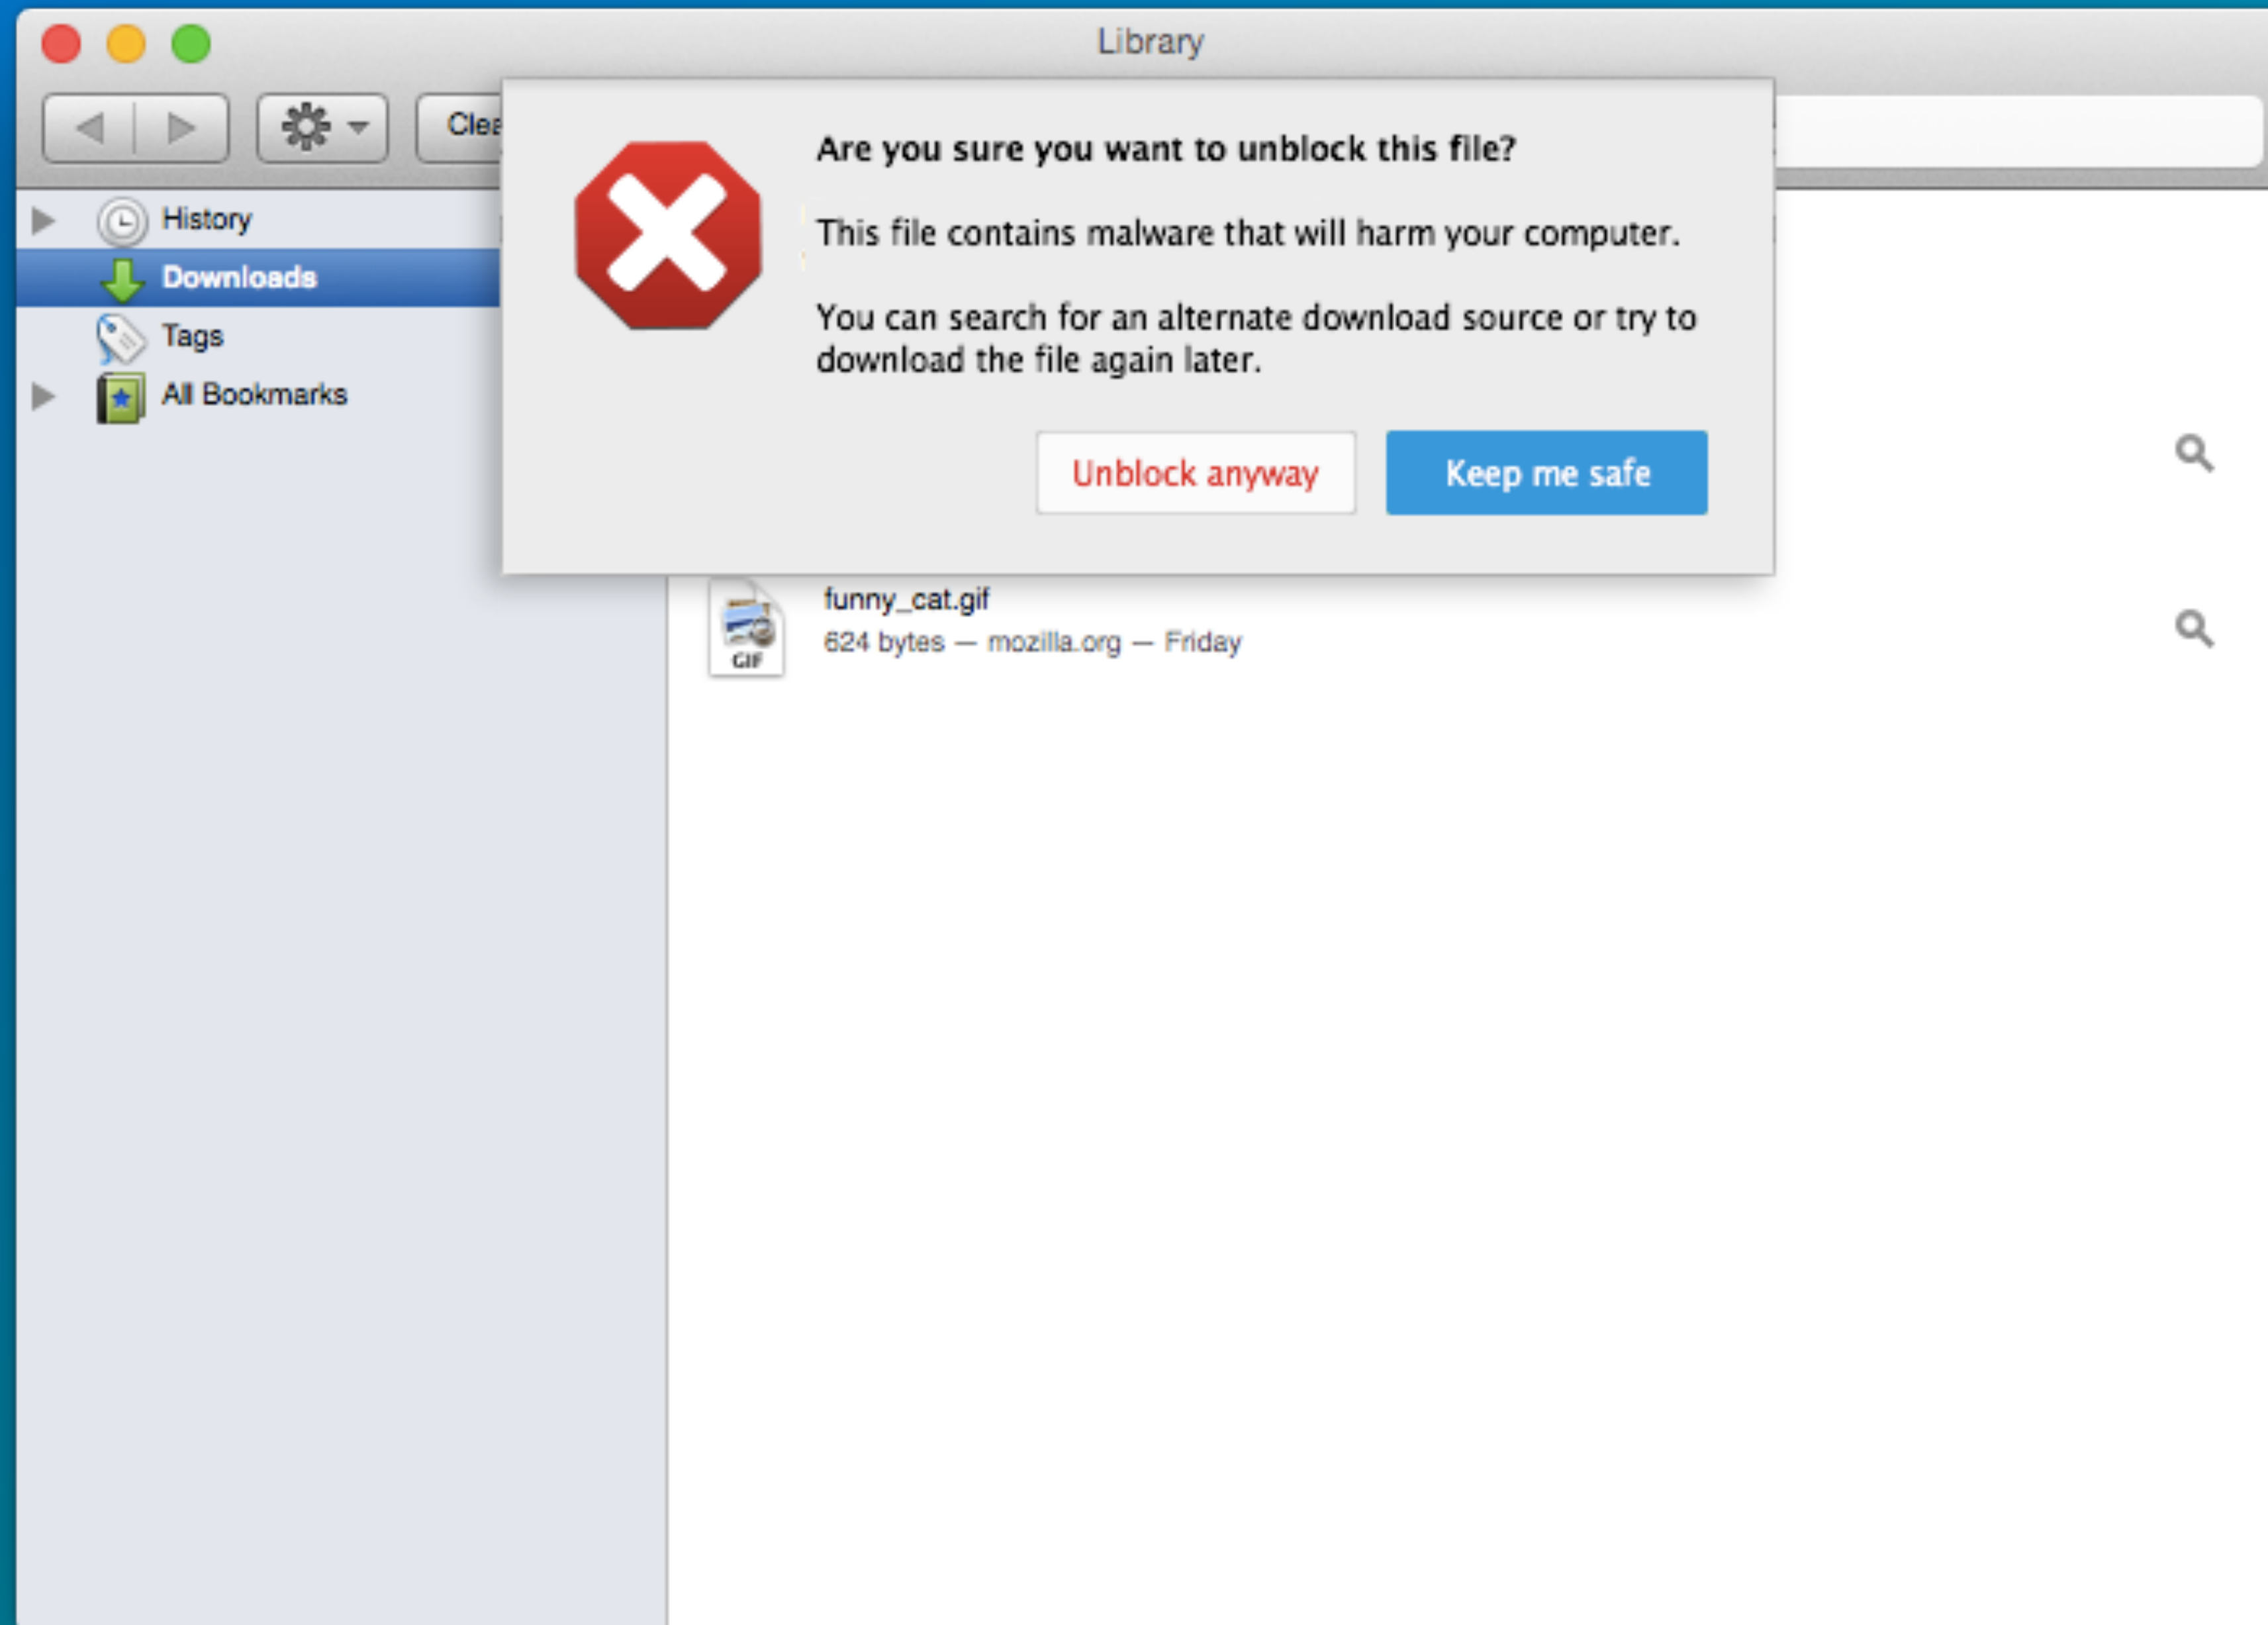

Hovering over the icon prompts a tool-tip stating that the file was flagged:

This file was flagged as being malicious

downloaded run your AV scanner. It should detect at least the file "eicar.com" in the single zip ARCHIVEe and may be even in the double zip ARCHIVEe. Once you have any access to the file(s) anymore. You might not even be allowed by the scanner which puts the file into quarantine. The test file will be treated as a harmless file. Read the user's manual of your AV scanner what to do or contact the manufacturer.

We had to block the file you just tried to download because it might be harmful to your computer.

The screenshot shows a Mozilla browser window with a download alert doorhanger. The browser's address bar shows "Google". The doorhanger is a white box with a yellow warning triangle icon on the left. The text inside the doorhanger reads: "The file you just tried to save is not usually downloaded and may be harmful. We've blocked it just in case!". Below this text is a blue link "Learn More" and a "Thanks" button with a dropdown arrow. The background of the browser window shows a webpage with text about AV scanners and file downloads.

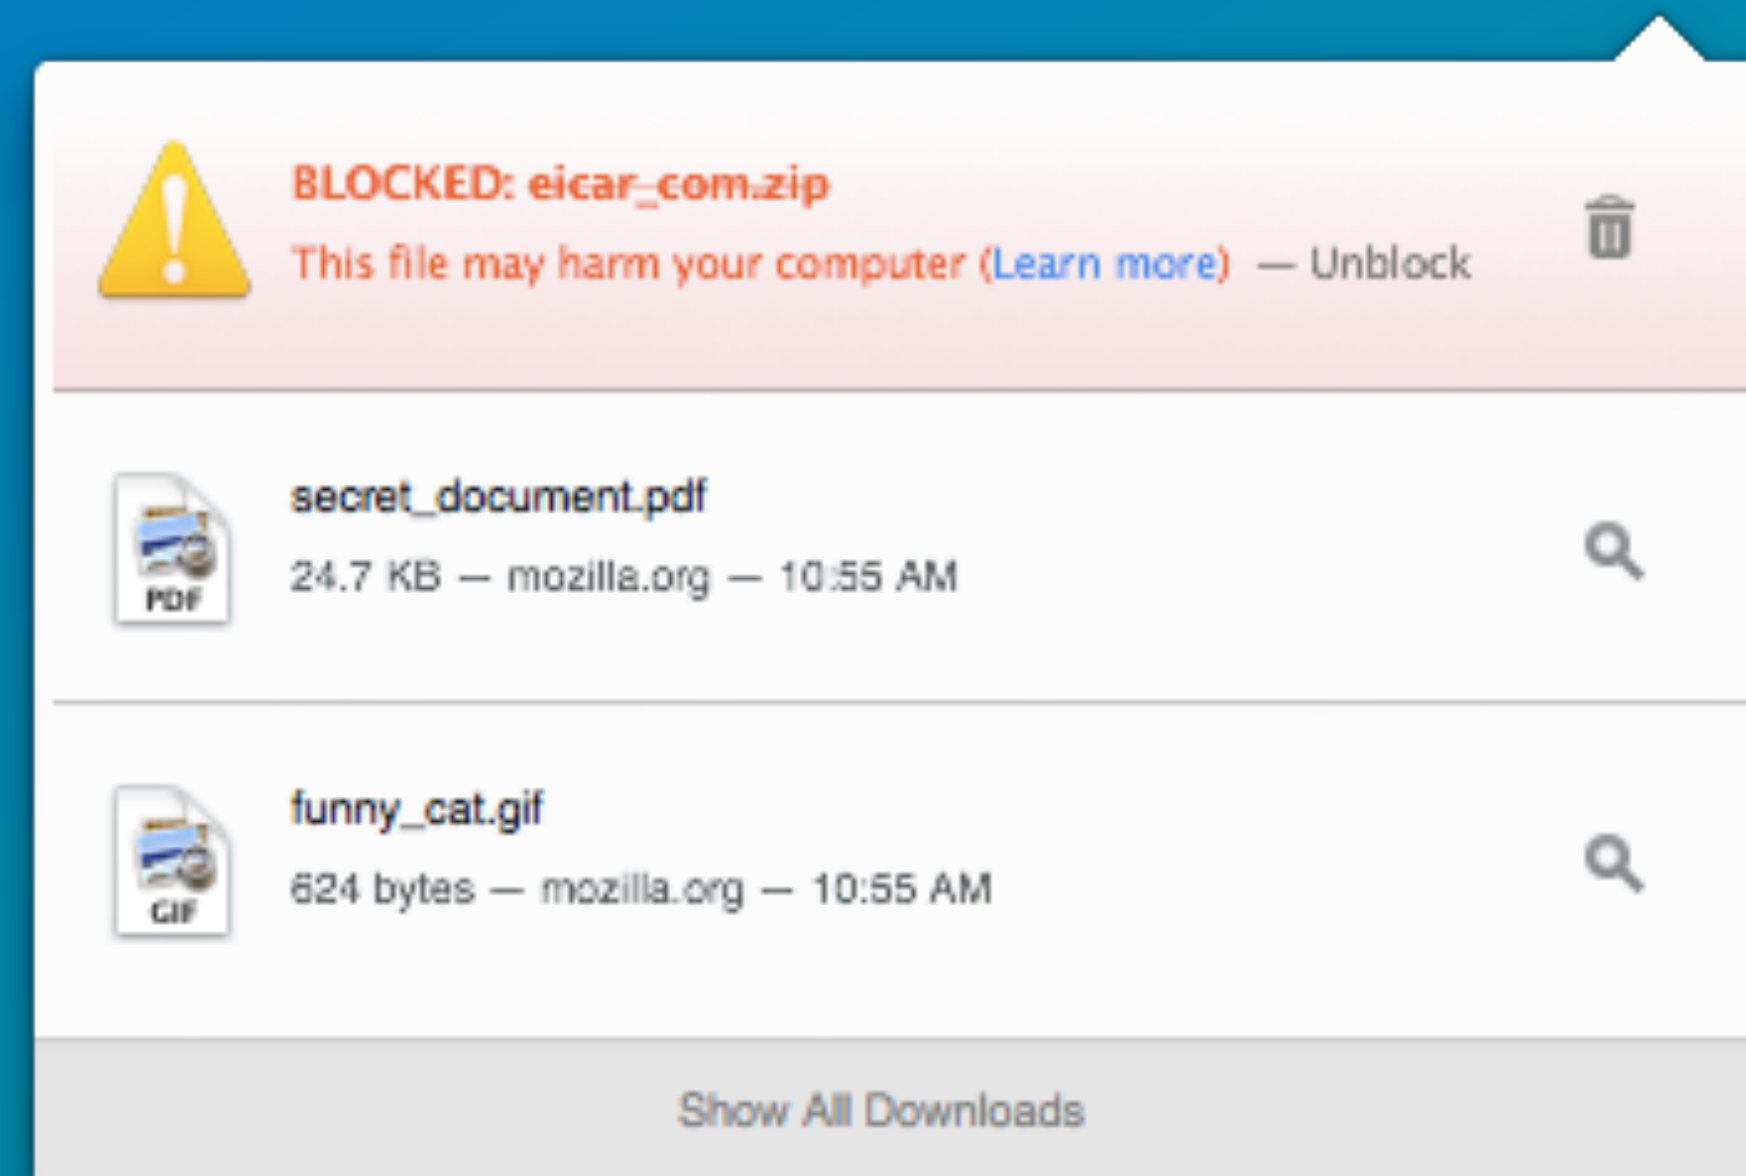

downloaded run your AV scanner. It should detect at least the file "eicar.com" in the single zip ARCHIVEe and may be even in the double zip ARCHIVEe. Once detected the scanner will prevent you any access to the file(s) anymore. You might not even be allowed by the scanner which puts the file into quarantine. The test file will be blocked file.
