Response to Mozilla's list of Recommended Practices

Recommended Practices	https://wiki.mozilla.org/CA:Recommended_Practices#CA_Recommended_Practices	Recommended Practices Statement	I have reviewed Mozilla's list of Recommended Practices, and confirm that we follow those practices, with exceptions and clarifications noted in the text box below.
-----------------------	---	---------------------------------	--

CA's Response to Recommended Practices	<ul style="list-style-type: none"> * Document Handling of IDNs in CP/CPS - Manual handling, addressed in next WebTrust Audit * Issuing SSL Certificates for Internal Domains - only domains successfully verified through a NIC-database are accepted * DNS names go in SAN - every DNS name in SAN, additionally one DNS name in Subject * Domain owned by a Natural Person - SSL certificates are only issued to organizations (SSL and SSL EV) 	Verified?	Verified
---	---	------------------	----------

Response to Mozilla's list of Potentially Problematic Practices

Potentially Problematic Practices	https://wiki.mozilla.org/CA:Problematic_Practices#Potentially_problematic_CA_practices	Problematic Practices Statement	I have reviewed Mozilla's list of Potentially Problematic Practices, and confirm that we do not do those practices, with exceptions and clarifications noted in the text box below.
CA's Response to Problematic Practices	<ul style="list-style-type: none"> * Long-lived DV - Non EV certificates issued by the new root certificate will have a maximum validity of 36 months (3 years) * Wildcard DV SSL certificates - Every issued SSL certificate is validated using OV * Email Address Prefixes for DV Certs - no email challenge-response mechanism to verify domain control is used domains are validated by identifying individual domain owners who are mentioned in trustworthy whois-databases * Delegation of Domain / Email validation to third parties - no third parties / RAs are involved in issuing SSL and SSL EV certificates * Allowing external entities to operate subordinate CAs - not used with SSL certificate roots * Distributing generated private keys in PKCS#12 files - keys are always generated by the subscriber * Certificates referencing hostnames or private IP addresses - certificates are only issued for external hostnames that can be verified - no IP addresses, no internal hostnames * Issuing SSL Certificates for Internal Domains - certificates are only issued for external hostnames that can be verified - no IP addresses, no internal hostnamesold certificates have been audited, every used domain name in our certificates has been verified against the database or our national registration service * SHA-1 Certificates - the new root certificate will only be used to issue SHA-256 certificatesexisting certificates (using another root) will be migrated, once the new root certificate has been deployed 	Verified? EV Audit Statement Date	10/23/2014	Verified?	Verified

BR Commitment to Comply	CPS section 1.1	Verified?	Verified
SSL Verification Procedures	CPS section 3.1.8 includes an optional check through the Administrative contact returned by the WHOIS - query. The new CPS that is covered by the next Audit (already in progress) will remove the "optional" so that the check is required with each issued certificate, Translation: A-Trust obtains a confirmation regarding the use of the domain from the administrative contact in the result of the WHOIS-query. This confirmation can be given by E-Mail or on the phone. If the administrative contact is not the applicant, A-Trust requires a statement of authority from the administrative contract as well as a scan of a valid ID (CPS 3.1.9).	Verified?	Verified
EV SSL Verification Procedures	Translation of EV SSL CPS sections 3.1.7, 3.1.8, and 3.1.9: https://bug1092963.bugzilla.mozilla.org/attachment.cgi?id=8584406	Verified?	Verified
Organization Verification Procedures	Translation of EV SSL CPS sections 3.1.7, 3.1.8, and 3.1.9: https://bug1092963.bugzilla.mozilla.org/attachment.cgi?id=8584406	Verified?	Verified
Email Address Verification Procedures	Not requesting the Email trust bit	Verified?	Not Applicable
Code Signing Subscriber Verification Pro	Not requesting the Code Signing trust bit	Verified?	Not Applicable
Multi-Factor Authentication	Issuance is only possible using a smart card with PIN	Verified?	Verified
Network Security	Regular Network security checks are performed and monitored by Austrian Authorities since the Austrian citizen card, which is used for E-Government is also issued by A-Trust.	Verified?	Verified
