

Desktop App Chrome

UX Proposal - Jan 27, 2015

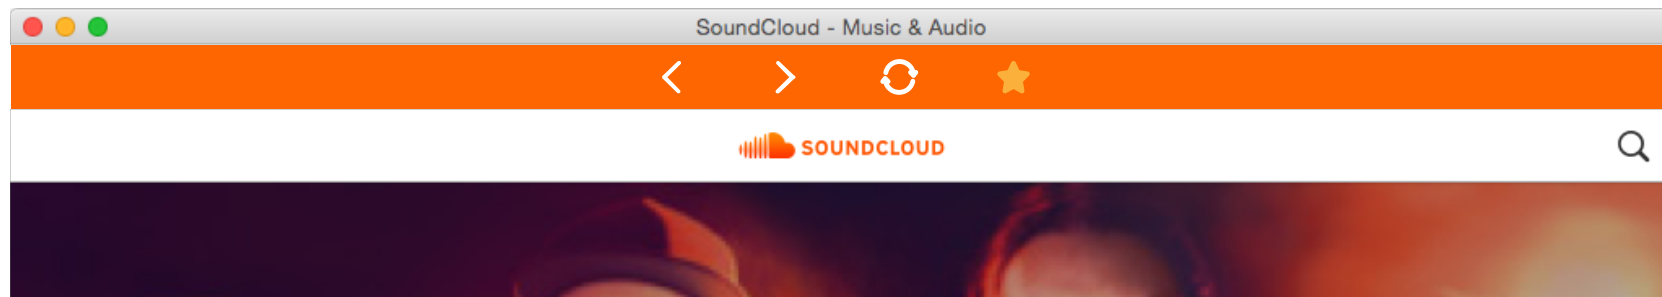

pwalmsley@mozilla.com

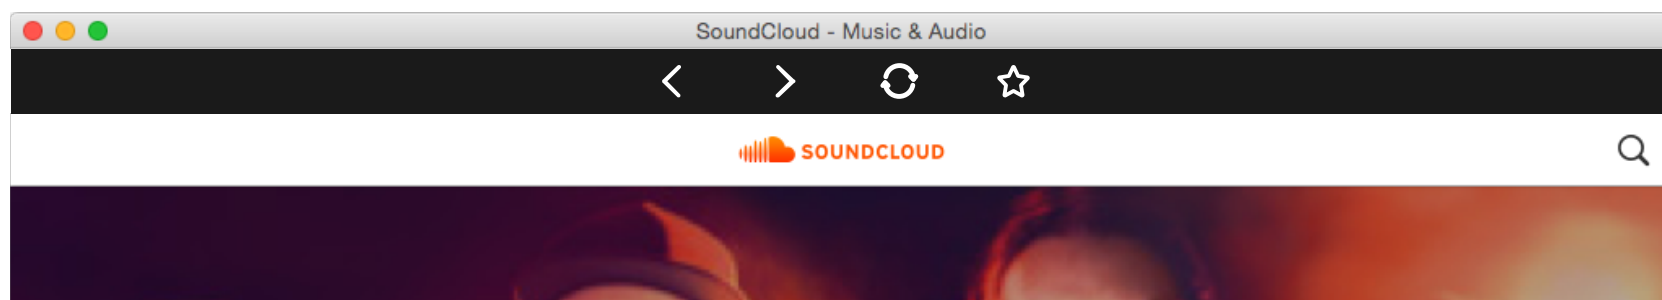

- Chrome is added at the top of the window and is persistent. Top nav is a more common pattern on desktop, as opposed to the bottom nav we use on mobile.
- Navigation is centered: back, forward, refresh, favorite.
- Chrome bar takes on brand color (more of a want than a need).
- Favorite is included here since we use on mobile. Will we use it on desktop? If so, what does favoriting do? Add a bookmark in Firefox?
