Announcing ExOS 7.0.2

Notes:

- The supported upgrade path from 6.x is to upgrade to 6.4.3 or later first. Then upgrade to 7.0.0.
- The upgrade from 6.4.3 may take longer than normal due to the database upgrade that takes pl
- v7.0.x will only accelerate with peers running 6.4.3 and later due to a change to the exinda inter protocol
  - If you are installing v7.0.x into an x800 estate, the best approach is to upgrade your core to 6.4.3 and then install v7 on one or more branch offices.
  - This allows all the existing appliances to accelerate to the core appliance and allows the appliance(s) to accelerate to the core box running 6.4.3
- New images for the Virtual appliances are not available. To install a new virtual appliance runnir 7.0.2, please first install 6.4.3 and upgrade to 7.0.2.

Platforms:

- 2061, 4010, 4061, 6060, 6062, 8060, 8062, 10060, 10062, Virtual

Supported upgrade versions:

- 7.0.0, 7.0.1, 7.0.1 Update 1
- 6.4.3, 6.4.4, 6.4.5, 6.4.6

Link to download the update:

- This release is free for people with Premium Maintenance and a paid upgrade for people with B Maintenance.
- See your Sales Rep or Contact Support for a link.

- With 7.0.2 we are supporting a new image format (v2). This format is smaller than the previous format (v1). Only appliances currently running 7.0.1 and later are able to use the v2 format for upgrades. All appliances running 7.0.0 and earlier must use the v1 image format.

7.0.2 Update 1 released. See the reply in this thread.

- If you are running versions 7.0.0 or earlier, use this image:
- 7.0.2 v1
