in place controls to protect the security and confidentiality of any sensitive data collected from subjects.

Not all research on humans is subject to the Common Rule.

Studies that only use publicly-available information, which potentially includes information mined from the web, have long been an exempt category. The term public, in this sense, is synonymous with benign—if the information was collected from a public source, analyzing and disseminating it is not considered harmful to the person about whom it pertains. More importantly, if a research study falls into this category, institutions are not required to oversee it. The public-private distinction in the Common Rule owes its
