Summary: ⓘ

Product: Firefox ([Change](#)) **Version:** 41 Branch ⓘ

What did you do? (steps to reproduce) ⓘ

I print some times html pages, like booking confirmations, to pdf with bullzip (<http://www.bullzip.com/>), which is a pdf printer driver.

What happened? (actual results) ⓘ

The text in the resulting pdf can not be selected, it seems to be a picture. If I use another browser like IE or chrome, the resulting pdf has selectable text. The file size is also different, the resulting pdf file with firefox is 10 times bigger than with IE or chrome.

What should have happened? (expected results) ⓘ

A pdf file with selectable text and same size like IE or chrome. It's quite annoying to have to switch browser to print an html page to pdf.

Attach a file: No file selected. ⓘ

Security: Many users could be harmed by this security problem: it should be kept hidden from the public until it is resolved.

Additional Details: This is a problem with Firefox on my phone or tablet.
