Android (before 5.x)	N / A	Droid Sans Fallback		N / A
Android (since 5.x)	N / A	TC: NotoSansHant*****		N / A
		SC: NotoSansHans*****		

* For iOS Chinese fonts, excl. sans-serif fonts, all other fonts have to download from Apple through in-app processes when necessary (e.g. iBooks).

** Hiragino Sans GB may not be retrievable for iOS since iOS 9, it is only suggested for browsing experiences via OS X since Snow Leopard.

*** For Windows XP, use "Kaiti_GB2312" instead. Windows XP ships "Kaiti_GB2312" made by GreatWall Technologies, while Windows Vista and later ships SimKai with PostScript name "Kaiti".

**** For DFKai-SB, please add both "DFKaiShu-SB-Estd-BF" and "DFKai-SB" in CSS. "DFKaiShu-SB-Estd-BF" is its PostScript name, while "DFKai-SB" is not.

***** For Android Fonts since 5.x, "NotoSansHant/NotoSansHans" are filename prefixes. Please check its PostScript name manually per system builds; meanwhile, some OEM manufacturers may remove them and use their own customized fonts.
