# If following 3 tabs are opened and the extension is started

**https://www.mozilla.org**

**Start the malicious extension**

**https://www.google.com**
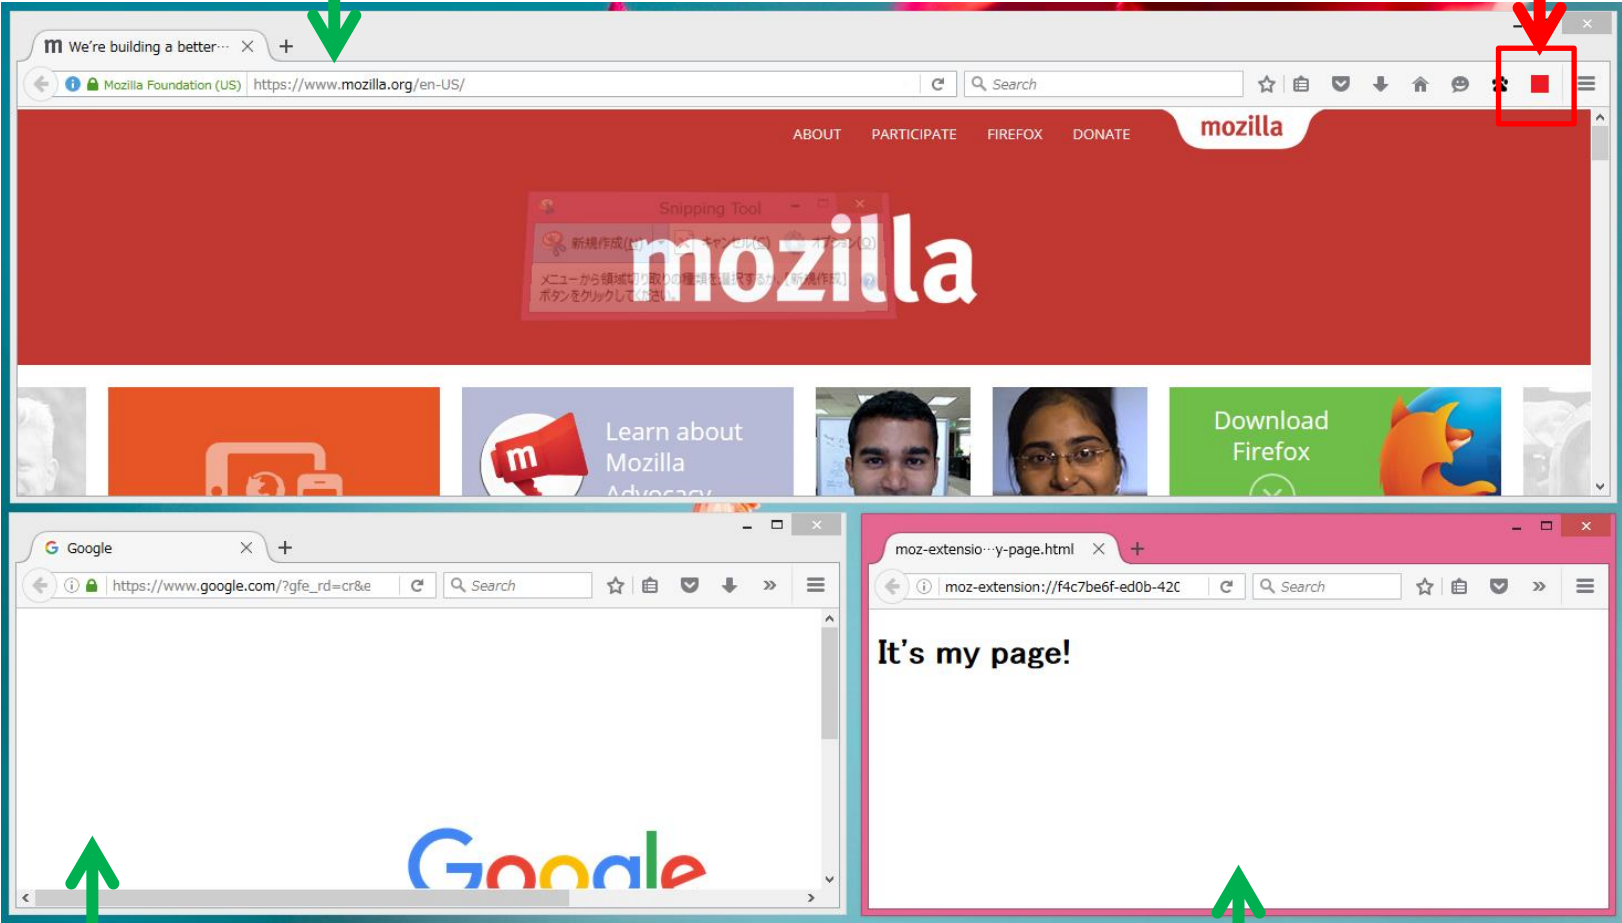

**Other WebExtensions**
(I used open-my-page-button extension made by Mozilla:
https://github.com/mdn/webextensions-examples/tree/master/open-my-page-button)

# Script is injected to all tabs including other extensions

**XSS on https://www.mozilla.org**

**XSS on https://www.google.com**
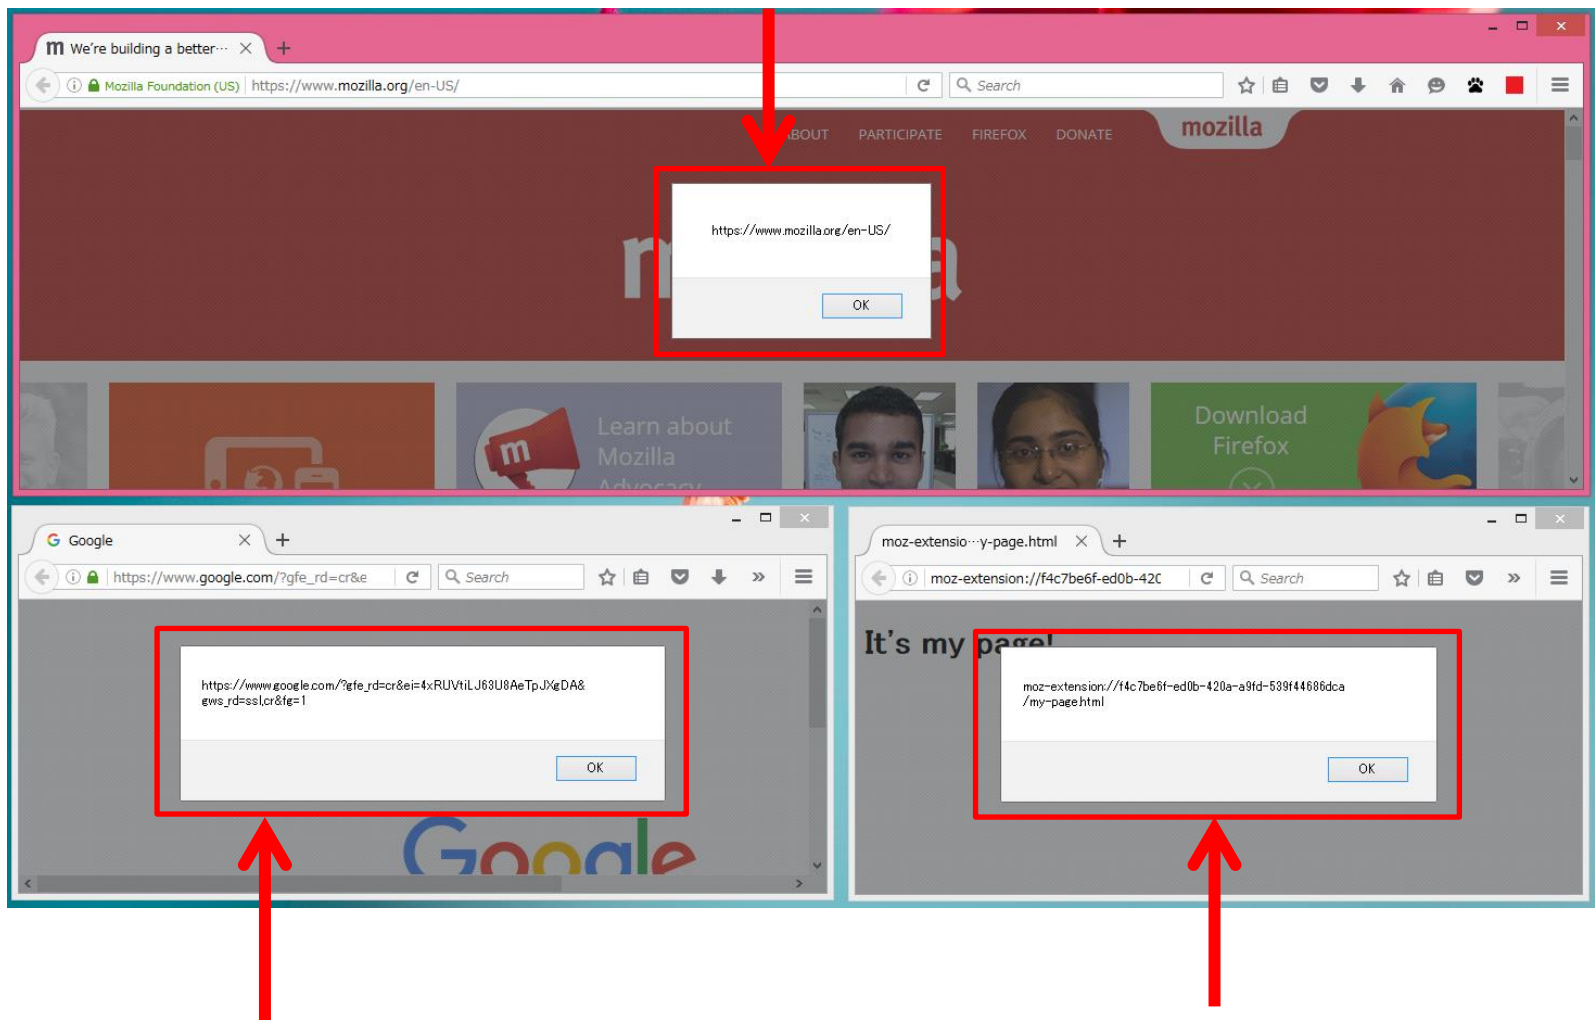

**XSS on the other WebExtensions (privilege escalation)**
