## **DETAILS OF MY PROBLEM**

I was developing an extension which is a pop up window for Malayalam Unicode typing, and it was finished and everything was OK. But yesterday firefox developer edition automatically updated. And there starts my problem..

The Pop up works in Firefox 45.0.2. No problem here. I can type in Malayalam Unicode without any problem. That is what I want to do with my add-on.

## But in Mozilla Firefox Developer Edition 48.0a2 New Update.

It fails to do so.

Look at the layout changed. And Unicode typing is not possible. Buttons seem to be working.

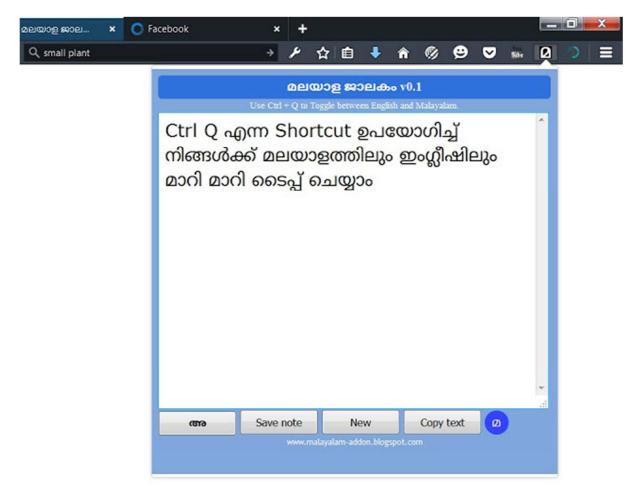

[Next page please]

The same Firefox developer edition 48.0a2 can display the pop up html in the browser, and everything works.!!

It doesn't work as a Pop up. That's the problem. It had worked in the previous developer edition. I have a snapshot of that too.

## So what happened with the new edition. $\boldsymbol{\boldsymbol{\varpi}}$
