

Privacy, security and you, more important today than ever.

At Mozilla, we believe that privacy and security are fundamental to the health of the Internet and should not be treated as optional. And the more we all know about issues concerning privacy and security, the more we can all lead healthier lives on the Internet.

Data Collection 2-line Statement for Card Headline

A healthy Internet can't exist without user control, yet are personal information is continually being tracked and collected without our consent. That's why we build features like the Forget Button into Firefox and why we develop products like Firefox Focus, our private browser for iOS — to give some control back individual users.

Manage mobile app permissions:
with supporting statement here & CTA

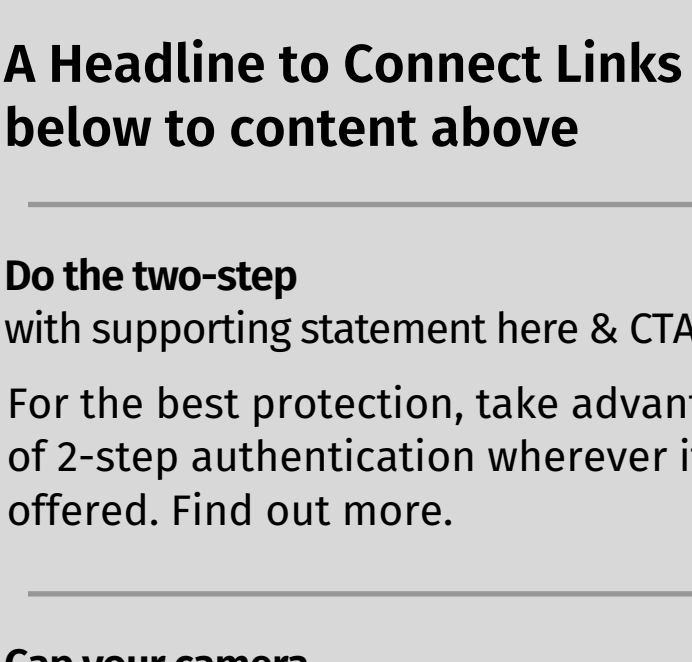

Some mobile apps can access a lot of information about you, including details not related to the service they provide. Control your privacy and location settings on iOS and Android.

Use Private Browsing
with supporting statement here & CTA

Don't want your browsing activity locally saved? Every major browser gives you the option to enable a Private Browsing feature. Visit our SmartOn Tracking page to learn more.

Government Surveillance 2-line Statement for Card Headline

Mozilla has been active in the fight against excessive government surveillance around the world, calling on U.S. lawmakers to rein in mass surveillance and advocating for specific improvements to surveillance law in many other countries. As an individual, here are a couple of things you can do to safeguard against big brother:

Use encrypted apps
with supporting statement here & CTA

Lock down your communications by using apps that provide encrypted text messaging or video conferencing. iMessage, Signal, WhatsApp, Facetime and Google Hangouts are just a few. Visit mozilla.org/encrypt for more info.

Take your passwords seriously
with supporting statement here & CTA

Long passwords are key. And don't use a single password everywhere. Here are more tips for keeping your accounts secure.

Cybersecurity 2-line Statement for Card Headline

At Mozilla, we've set a standard for how other companies should handle data securely and we publicly oppose government proposals that undermine user security on the Internet. To safeguard yourself against being hacked, here a few things you can do:

A Headline to Connect Links below to content above

Do the two-step
with supporting statement here & CTA

For the best protection, take advantage of 2-step authentication wherever it's offered. Find out more.

Cap your camera
with supporting statement here & CTA

Put a sticker over your webcam when you're not using it.

In case of emergency
