01.org is where we pull together open source work that Intel engineers are involved in. Here's where you can find projects we maintain and contribute to in one location, from the most widely known, the Linux kernel, to very focused projects, like oFono and SyncEvolution, to the ones we started here at Intel and provide full hosting for, like PowerTop and the Web Simulator. Each project has its own micro-site, where it's easy to learn about the project and engage in the community. And Intel open source maintainers and developers will find all the tools needed to host a project.

# Our Mission

---

The internet is essential to growing the knowledge we have and sharing it with each other. And for many of us, it's a huge part of our everyday lives. But most of the world does not have access to the internet. Internet.org is a Facebook-led initiative with the goal of bringing internet access and the benefits of connectivity to the portion of the world that doesn't have them.

Imagine the difference an accurate weather report could make for a farmer planting crops, or the power of an encyclopedia for a child without textbooks. Now, imagine what they could contribute when the world can hear their voices. The more we connect, the better it gets.
