

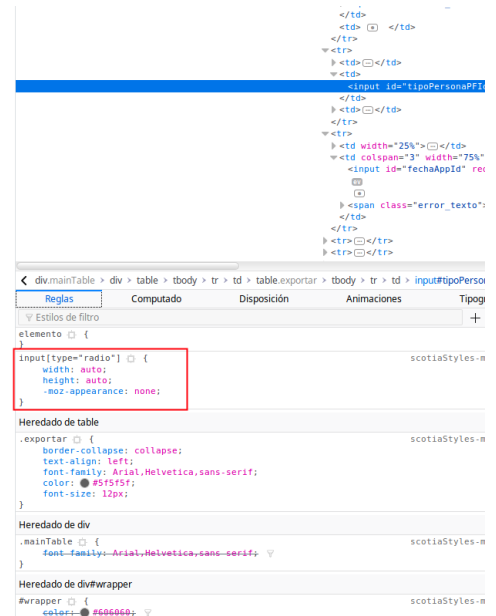

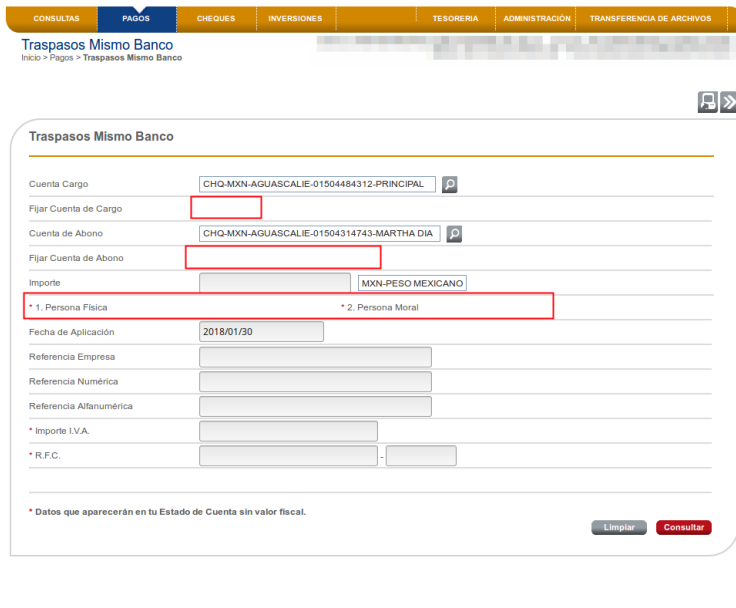

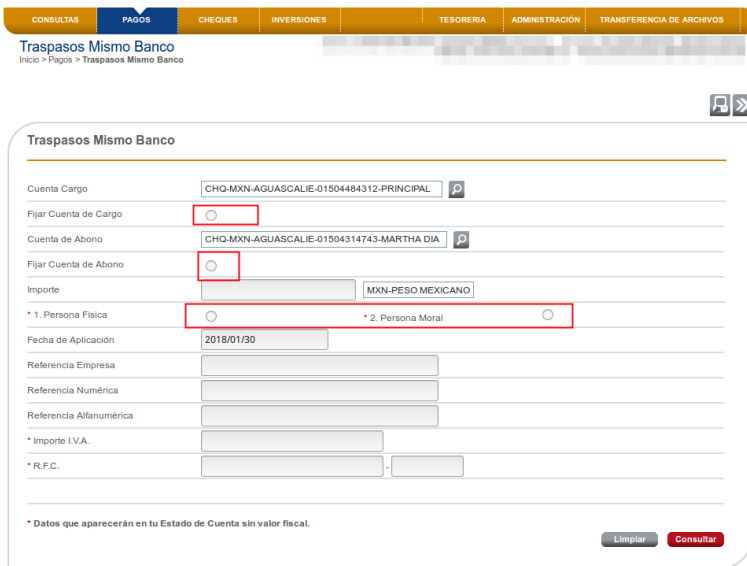

Image examples of real case of my Banks Website

Radio buttons not visible

After changing style in Inspector, radio buttons are visible

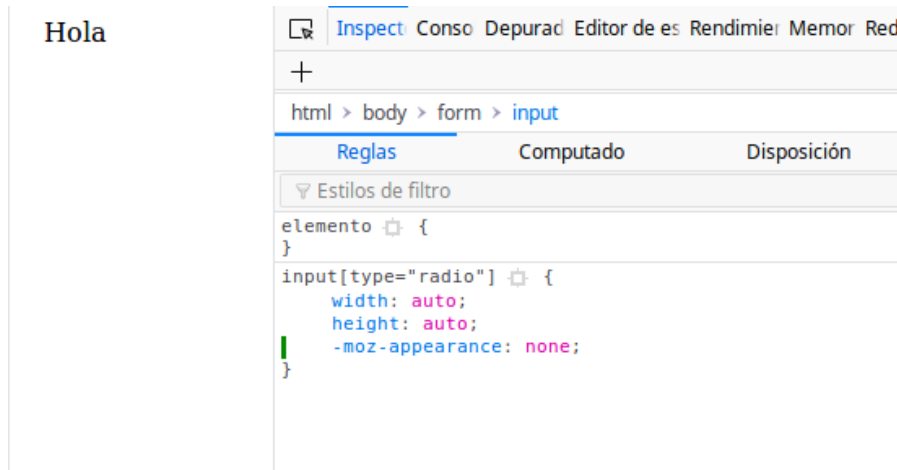

Next page supplies complete test case with a local file.

Example file that causes the issue

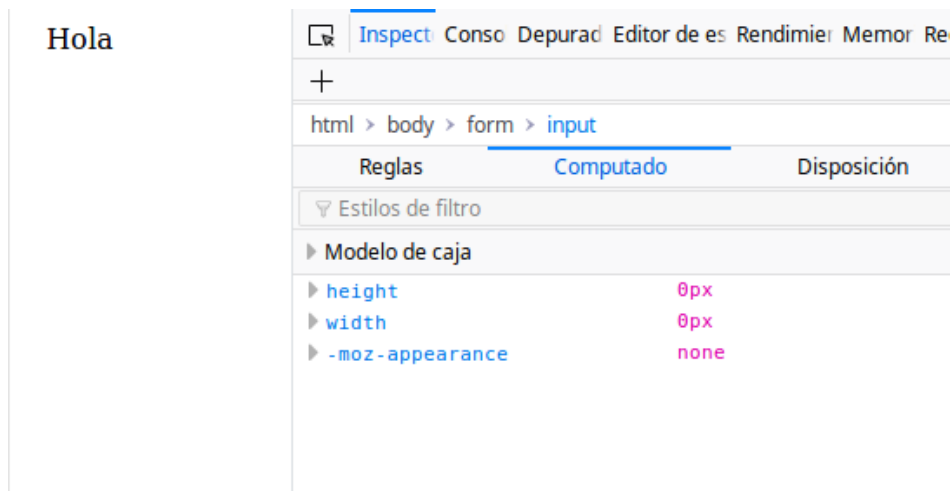

```
<html>
<head>
</head>
<style>
input[type="radio"] {width: auto;height: auto;-moz-appearance: none;}
</style>
<body>
<form>
<input type="radio"> Hola
</form>
</html>
```

Image radio button is not displayed, clients web site has this css applied to all radio buttons and checkboxes this example is for radio buttons only.

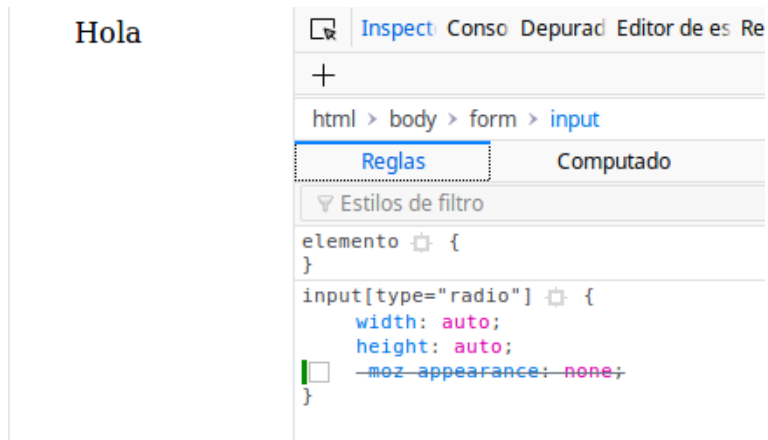

Using the inspector

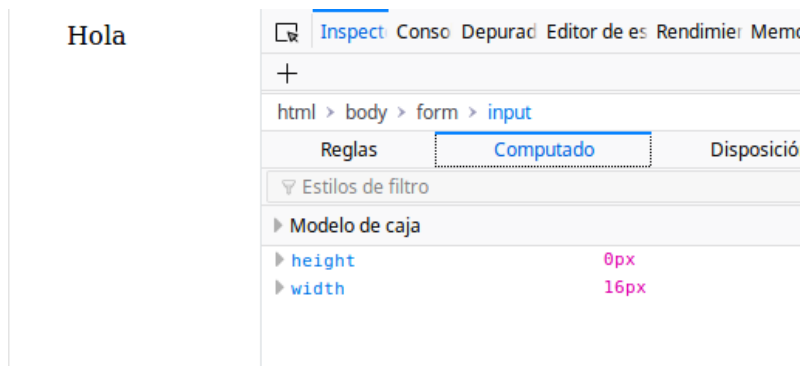

Computed rules show : width, height = 0

If I remove the moz-appearance style, problem is not solved

width resets to 16px, but height remains at 0

If I remove all styles problem still persists

Hola

Inspect Conso Depurad Editor de es Rendimier M

+

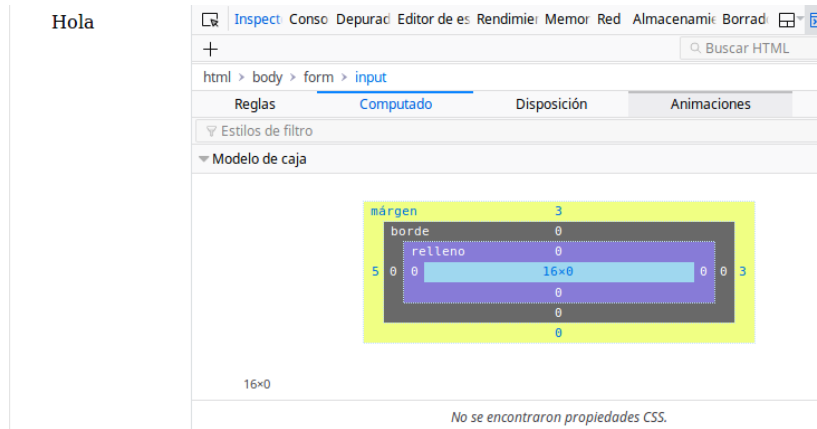

html > body > form > input

Reglas	Computado	Dispos
--------	-----------	--------

Estilos de filtro

```
elemento {  
}  
input[type="radio"] {  
  width: auto;  
  height: auto;  
  -moz-appearance: none;  
}
```

If I check the computations it shows height=0

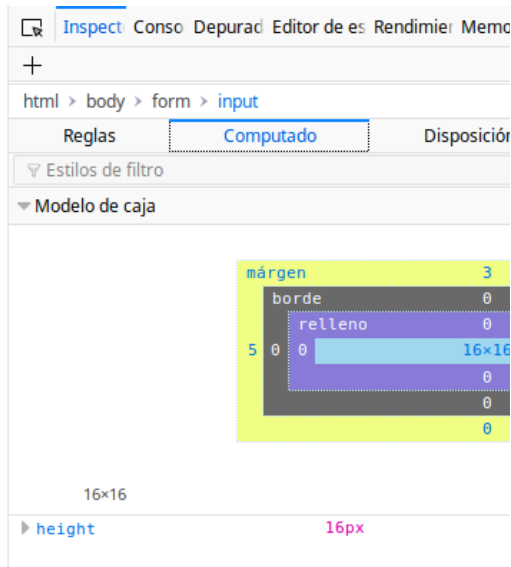

I have to explicitly set height to 16px to see the radio button, now it can be seen

Hola

Computation shows correct height now

Hola

This same page shows correctly on Chromium or IE without tweaks
