Hello there,

Looking for somebody to help me with some issues I am having with an older laptop BIOS that I use for a
home server. I would really like to unlock VT-x (Virtualization) I know the current CPU (core 2 duo
T7600) can support it but it there is no option in the BIOS.

Another bonus thing I would love unlocked is the BIOS RAM limitation of 3GB. The Chipset (SiS M672)
has a maximum memory limit is 4GB so yet again another BIOS limitation. 🙁

Here is a link to my BIOS : http://support.ts.fujitsu.com/Download
/ShowDescription.asp?SoftwareGUID=CDDBA26F-B2D7-47B9-9999-7D42862C22F8&
OSID=665F4A20-6E31-43C3-82C2-D98CE773007C&Status=True&
Component=Flash+Bios+for+ESPRIMO+Mobile+V5515

I will make sure to give a donation to anybody that can help me as I wont have to buy another server.

Thanks,
Alt

Here is a Link to the .ROM from my laptop

(Phoenix-V1.10)
https://www.sendspace.com/file/hf3hlb

I´ve also interest on your firmware.
Unfortunately, the file is not to flash with WinPhlash or Phlash (Error 161 part Table Signature not found
in the interface).
with which program I can flash your file on my laptop?
