# Error opening PHP files #14952

New issue

⊙ Open   **theAKBhub** opened this issue on 1 Nov 2019 · 3 comments

theAKBhub commented on 1 Nov 2019

Everytime I open a PHP file in Brackets, the error as shown below is displayed.

Error

Error code 3221225477 encountered while starting the PHP process.

Open Preferences   Cancel

I do have `executablePath` set to the correct `php.exe` path but it didn't solve the issue.

The error, however, doesn't cause any issues while editing, saving or executing the PHP code. It's shown only when a PHP file is opened.

How can I get rid of this?

Thanks in advance.

Try this thread => #14783
If it is windows, do make sure the path is has double slashes `\\` instead of single slash `\`.

theAKBhub commented on 8 Nov 2019   Author

Hi
I had it as double slash (`\\`) from before.

```
"php": {
        "enablePhpTooling": true,
        "executablePath": "C:\\wamp64\\bin\\php
\\php7.3.5\\php.exe",
        "memoryLimit": "4095M",
        "validateOnType": "false"
    }
```

Is there anything else that I can do to prevent this error?
