OpenURL
register URL echo
unregister URL echo

OpenURL: Opens a URL. Allows for more options than GetURL event

OpenURL *string* -- *URL*

[**to** 'FSS'] -- *file destination*

[**toWindow** *integer*] -- *window ID*

[**flags** *integer*] -- *Binary: any combination of 1, 2 and 4 is allowed: 1 and 2 mean force reload the document. 4 is ignored*

[**post data** *string*] -- *Form posting data*

[**post type** *string*] -- *MIME type of the posting data. Defaults to application/x-www-form-urlencoded*

[**progressApp** 'psn'] -- *Application that will display progress*

Result: *integer* -- *ID of the loading window*
