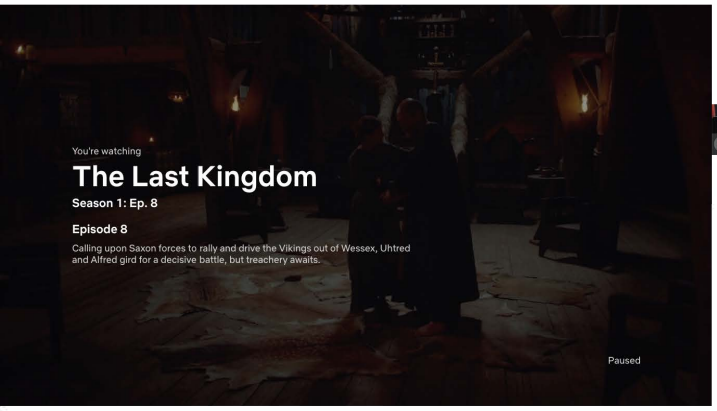
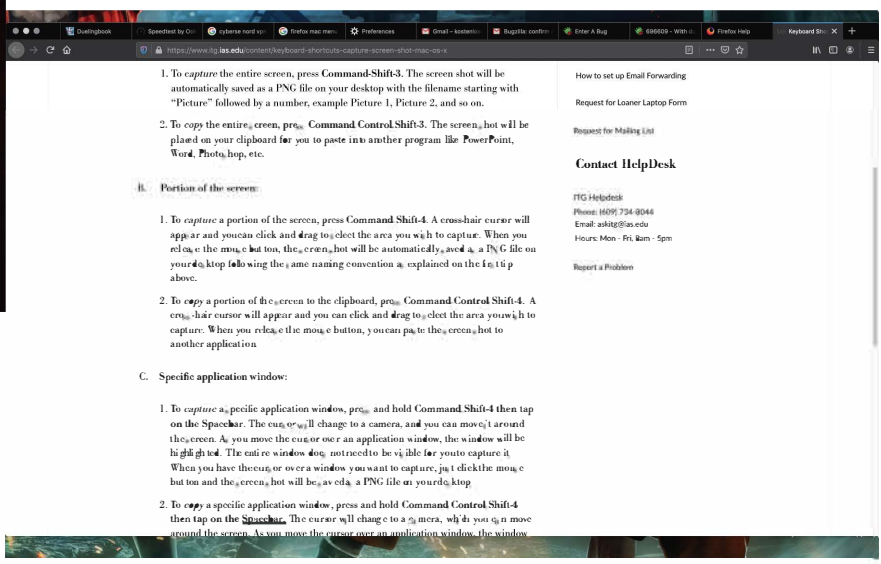
Issue is shown.
missing menu bar and dock of OS X

Main Monitor

Monitor 2





1. To *capture* the entire screen, press **Command-Shift-3**. The screen shot will be automatically saved as a PNG file on your desktop with the filename starting with "Picture" followed by a number, example Picture 1, Picture 2, and so on.
2. To *copy* the entire screen, press **Command Control Shift-3**. The screenshot will be placed on your clipboard for you to paste into another program like PowerPoint, Word, Photoshop, etc.

B. **Portion of the screen:**

1. To *capture* a portion of the screen, press **Command Shift-4**. A cross-hair cursor will appear and you can click and drag to select the area you wish to capture. When you release the mouse button, the screenshot will be automatically saved as a PNG file on your desktop following the same naming convention as explained on the first tip above.
2. To *copy* a portion of the screen to the clipboard, press **Command Control Shift-4**. A cross-hair cursor will appear and you can click and drag to select the area you wish to capture. When you release the mouse button, you can paste the screenshot to another application

C. **Specific application window:**

1. To *capture* a specific application window, press and hold **Command Shift-4 then** tap on the **Spacebar**. The cursor will change to a camera, and you can move it around the screen. As you move the cursor over an application window, the window will be highlighted. The entire window does not need to be visible for you to capture it. When you have the cursor over a window you want to capture, just click the mouse button and the screenshot will be saved as a PNG file on your desktop
2. To *copy* a specific application window, press and hold **Command Control Shift-4** then tap on the Spacebar. The cursor will change to a camera, which you can move around the screen. As you move the cursor over an application window, the window
