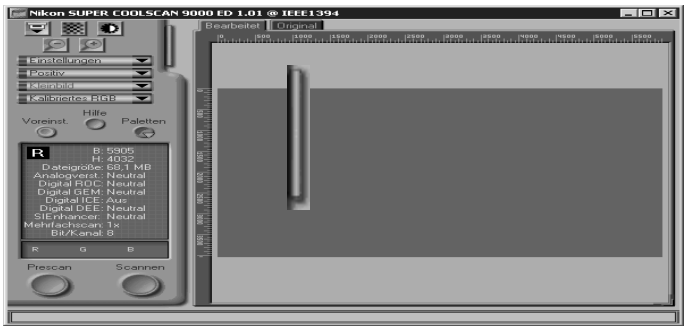
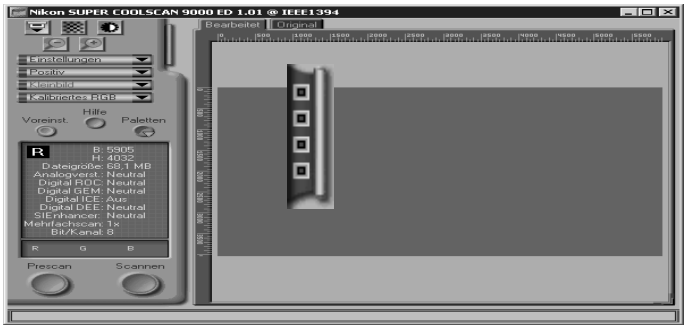
Wrong Printed Background in Table

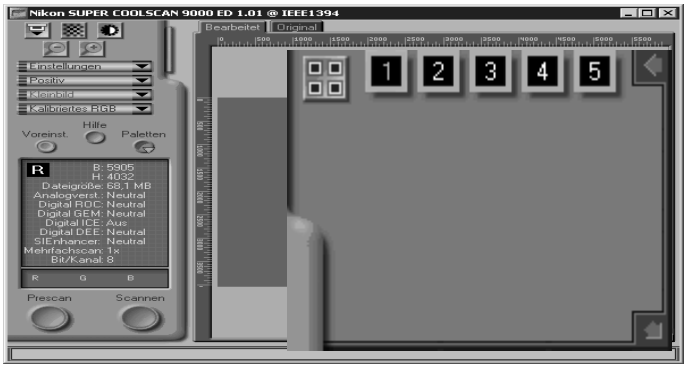
Bug 257551 in Bugzilla:

The three table elements are smaller than the background image.

Screen and print preview show the upper left corner of that background image **correctly**.

The **printout squeezes the whole background image** into the table elements.
So, the background **does not match** with the proper positioned foreground images.
(Mark the hole page with Ctrl-A to see these foreground images.)






BTW: IE 6.0.2800.1106CO prints correctly.
