

Module Owners

This page lists Module Owners and their Peers for Mozilla code modules. A code Module is a collection of source files that form a coherent bundle. An Owner is the person in charge of a Module. A Peer is a person whom the Owner has designated to help maintain the Module. If a Module has an Owner, the Owner or a Peer should in general review all code changes that go into that module.

A list of [Module Owners for activities other than code management] is also available. [text inside brackets is a link to the new page on wiki.m.o that lists the 3 current official modules.]

The database from which this document is generated sometimes gets out of date. In order to identify the people to talk to about a particular source tree directory, it may be better to consult Bonsai, to see who is regularly checking in changes.

Questions about module ownership should be directed to the peers of the Module Ownership module. [Can we make this link to that module? need to make that an anchor in the original doc.]

Don't know who owns the file you're hacking? Enter its path and name to jump to the module it belongs to.

(FE = Front End, BE = Back End, XP = Cross Platform)
