If you think of a table, each cell is an independent area. (This is denoted by all of the " 1 "' $\varsigma$

| 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |
| 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |
| 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |

This is what I am trying to do. Note that when cells are combined, I'm denoting this by putting in how many cells are grouped together. (So if you see a "2" it means I am using two cells to make one larger cell, " 5 " means I'm using five cells, and so on.

| 1 | 1 | 1 | 1 | 1 | 2 | 2 | 1 | 1 | 1 | 1 | 2 | 2 | 1 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 1 | 1 | 1 | 1 | 2 | 2 | 1 | 1 | 1 | 1 | 2 | 2 | 1 |
| 1 | 4 | 4 | 4 | 4 | 1 | 5 | 5 | 5 | 5 | 5 | 1 | 2 | 2 |
| 1 | 4 | 4 | 4 | 4 | 1 | 8 | 8 | 8 | 8 | 8 | 8 | 8 | 8 |

This is what I am getting. Instead of seeing the above, the table is refusing to display only one cell followed by either the " 2 ", " 5 ", or " 8 " cells which are grouped together. Or, if my theory is correct, FireFox (and IE) are only giving the " 2 ", " 5 ", and " 8 " areas one pixel as the size and keeping all of the rest for the left cell that should only be haff the width of the cell above it. (ie: One haff of the " 2 " areas

| 1 | 1 | 1 | 1 | 1 | 2 | 2 | 1 | 1 | 1 | 1 | 2 | 2 | 1 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 1 | 1 | 1 | 1 | 2 | 2 | 1 | 1 | 1 | 1 | 2 | 2 | 1 |
| 1 | 4 | 4 | 4 | 4 | Should be 1 | Should be 5 | 5 | 5 | 5 | 5 | Should be 1 | Should be 2 | 2 |
| 1 | 4 | 4 | 4 | 4 | Should be 1 | Should be 8 | 8 | 8 | 8 | 8 | 8 | 8 | 8 |

I have tried setting the widths of each individual cell. - Doesn't work
I have tried setting the widths of ONLY the first row of cells and then only using the colspan command on the rest of the cells. - Doesn't work
I have tried setting the widths of ONLY the first row of cells, using colspan on everything else, and setting the widths of only the $2,4,5$, and 8 areas. - Doesn't work
I have tried setting the widths of ONLY the first row of cells, using colspan on everything else, and setting the widths of only those cells which should be one(1). - Doesn't work.
I have tried setting the widths of ONLY the first row of cells, using colspan on everything else, and setting the widths of both sides of the "should be X" areas. - Doesn't work.
I have tried using CSS - Doesn't work
I have tried using inline styles - Doesn't work.
If you still do not understand what I am talking about - please give me a call. 713-745-6169 and I can go over this with you. Because if this doesn't explain it to you, then nothing I post ever will and you need to talk directly to me so I can explain what's going on. :-)
