"Politicians think that by stopping up the chimney they can stop its smoking. They try the experiment, they drive the smoke back, and there is more smoke than ever; but they do not see that their want of common sense has increased the evil they would have prevented."
....Borne

STOCK MARKET TIMING UPDATE

DJIA: 11543.96

S & P 500: 1282.83

In our view, the stock market is undergoing a protracted bottoming process in a market decline that began in the fourth quarter of last year. Although the overall decline has exceeded our expectations, we view the bottoming process that has been underway since January as a necessary precursor to an improved stock market outlook.

The stock market has registered three important benchmark lows this year. The first was the January 22 S&P 500 Index close of 1310.50 in the midst of the Societe Generale global trading scandal. The second was the March 10 S&P 500 Index close of 1273.37 as the Federal Reserve sought a buyer for Bear Stearns. The third was the July 15 S&P 500 Index close of 1214.91 as oil reached the \$148 level and the credit markets reacted to the prospect of a government bailout of Fannie Mae and Freddie Mac. Although the July 15 close was 7.3% below the January 22 close, the market spent a great deal of time testing and probing the S&P 500 range between the low-1200's and the low 1300's.

Although additional testing of the area of the July 15 closing low may occur, we view the S&P 500 low-to-mid 1200's range as an attractive area for equity purchases. We expect the S&P 500 Index to challenge its previous record closing high of 1565 next year as investors move beyond the current economic malaise and look forward to improving corporate earnings prospects as the economy moves into its recovery phase.

We continue to monitor the key variables that influence our stock market outlook, and this month we are reviewing the **Marketimer®** core stock market risk factors.

Recession Risk: The historical definition of a recession is two consecutive quarters of negative real gross domestic product (GDP) growth. Although so far a recession by this definition has been avoided, we do not believe the economy is completely out of the woods yet. Our primary focus is the health of the economy in the fourth quarter of 2008 and the first quarter of 2009. Several factors will dominate consumer behavior as we move through this period.

We expect the housing recession to persist into next year as a period of price stability will be required before a recovery can occur. Tightened lending standards are making mortgage loans more difficult to acquire and this condition will continue into next year. Fuel prices remain high, and many consumers will be pinched by high heating costs this winter. Auto sales remain under pressure due to the oversupply of low mileage vehicles relative to high mileage vehicles as consumer preferences change due to high gasoline prices. The auto industry must work through a massive transition in order to correct this imbalance.

...Continued on page 2

In addition to domestic economic weakness, we anticipate a slowdown in foreign economic activity. Europe is suffering from its single mandate monetary policy, which targets inflation without regard to economic growth. Rates are too high in Europe and the risk of recession there is growing. Combined with renewed economic weakness in Japan and the stronger greenback, recent strength in U.S. exports is likely to moderate in 2009. U.S. export growth of 19% over the past year has been a major factor in terms of the resilience of the U.S. economy. We expect lackluster economic activity through the first quarter of 2009, and to the extent that recession risk remains, we believe it is centered in the fourth quarter of 2008 and first quarter of 2009.

Inflation Risk: Although the core inflation rate as measured by the personal consumption expenditure (PCE) index remains low at 2.4%, the headline inflation figure of 4.5% is elevated. The same is true for the consumer price index (CPI) which shows 2.5% core inflation and 5.6% headline inflation. We expect inflation pressures to ease into next year as the partial reversal of the large increases in oil and commodity prices works through the pricing system.

The critical factor for future inflation is the trend of low unit labor costs. Unit labor costs rose at an annual rate of only 1.5% in the second quarter based on recent changes in hourly compensation and gains in productivity. Civilian worker compensation rose only 3.1% year-over-year through June, and second quarter productivity increased at an annual rate of 2.2%. The firming trend in the U.S. dollar also contributes to a lower inflation outlook as inflation from imported products is reduced.

Interest Rate Risk: We expect the Federal Open Market Committee (FOMC) to hold the federal funds rate steady at its current 2% level through the end of the year. Given the state of the economy, there is no justification for a rate increase. We expect the FOMC to retain the status quo at the September 16 meeting, the October 28 and 29 meeting, and probably the December 16 meeting. The Fed likes to maintain a very low profile at election time, and the probability of any rate change at the two upcoming meetings is essentially zero.

We are maintaining our projected 2008 real gross domestic product forecast of 1% to 2%, and our 2009 forecast of 2% to 3%. Based on the latest data, the U.S. economy grew at an annual rate of 2.1% during the first half of 2008. Although 2009 may get off to a slow start, we expect the economy to enter a meaningful recovery phase as the year progresses.

Valuation Risk: We view the stock market as undervalued based on our current 2009 S&P 500 Index operating earnings estimate of \$94. We regard a price/earnings ratio of 16.5 to 17 times this estimate as reasonable next year, and the midpoint of this P/E range would produce new record highs for the S&P 500 Index.

Although we regard the price of oil as the wildcard in our forecast, we are encouraged by recent oil price weakness. Last month's **Marketimer**® stated that "we believe a good case can be made for oil prices to trend toward the \$100 per barrel level into 2009". To date, oil prices have retreated from their mid-July peak of \$148 to their Labor Day price of \$115.45.

One of the key factors in the P/E ratio equation is inflation expectations. P/E levels can improve as the rate of inflation moderates, and this dynamic is likely to push P/E multiples higher into next year. Another key P/E variable is interest rates, and our outlook for low short-term rates and moderate long rates into next year should support improved P/E levels. As the market works through the current difficulty in the credit markets, the current S&P 500 Index P/E multiple based on our 2009 operating earnings estimate is 13.6.

...Continued on page 3

The 60-day put/call ratio remains in favorable territory with a current reading of 1.00. This gauge continues to show a high level of skepticism about the stock market. The Investors Intelligence survey of investment advisors shows a decided lack of enthusiasm for equities. The **Marketimer® Stock Market Sentiment Index®** remains in bullish territory with a current reading of 127. We regard high levels of bearish sentiment as favorable for the market, since those who are out of the market can decide to reinvest, thereby representing future demand for shares.

In summary, the stock market is in the process of establishing an important bottom in our view. This process is taking place over an extended period of time as investors await indications that a sustainable economic recovery will materialize. Historically, the stock market begins to discount future economic recovery approximately six months in advance of the economic evidence. Investors are currently preoccupied with the on-going housing recession, tighter credit conditions and high energy prices. As we move into next year, we expect investor attention to focus on economic recovery and an improving corporate earnings outlook.

Additional testing of the area of the July 15 closing low of 1214.91 remains a possibility. We view the S&P 500 Index low-to-mid 1200's range as an attractive area for purchasing equities. Above that price range we suggest a dollar-cost-average approach for new equity money. We look for a challenge of the record S&P 500 closing high in 2009 as the economy recovers, inflation eases, and corporate earnings improve.

MARKETIMER NO-LOAD RECOMMENDED LIST ADDITION

Vanguard FTSE all-World ex U.S. Fund (VFWIX) has been added to the recommended no-load fund list on page five. This fund invests in stocks on a worldwide basis excluding the U.S. We view this fund as an excellent low cost vehicle for international investing in a highly diversified format. The expense ratio of 0.40% is well below the average for international funds. The current dividend yield is estimated at 1% and the beta coefficient is estimated at 1.10.

Vanguard FTSE All-World ex U.S. Fund is available for investment in all states. The initial minimum investment requirement is \$3000, or \$2000 for education savings accounts. Subsequent investments can be added in amounts of \$100 or more. The fund has a 2% redemption fee on shares redeemed within two months of purchase. The fund opened on March 8, 2007 and is available for personal, I.R.A. and education savings accounts, along with Uniform Gifts to Minors accounts. Although this fund is a candidate for possible future use in our model portfolios, we are not increasing our international exposure at this time.

FEDERAL RESERVE UPDATE

We agree with the view of Federal Reserve Chairman Ben Bernanke that a trend toward lower inflation is likely to develop in response to slower global growth. The improving trend in the dollar is also helpful in reducing inflation from imported products. We expect Fed efforts aimed at money supply growth to continue. A reduction in headline inflation would serve to increase real money supply growth figures going forward.

x) Vanguard Index Extended and Small Cap funds charge purchase fees of 0.5% or less to defray expenses of broad diversification;
annual expense ratios on these funds are extraordinarily low.

z) Vanguard International Growth Fund charges a redemption fee of 2% on sales of shares held less than two months.

INTEREST RATES/FIXED-INCOME PORTFOLIO

The **Marketimer**® fixed-income portfolio has a current weighted-average yield of 5.1%, a weighted-average duration of 3.9, and a weighted-average maturity of 5.6 years. Duration is the weighted-average of the times that interest payments and the final return of principal are received. A duration of 3.9 implies that a one-percent increase in corresponding interest rates would result in a 3.9% decline in portfolio net asset value. The latest reading of the Index of Leading Economic Indicators supports our view that economic activity will remain sluggish into the winter season. This suggests that rates will remain benign in the months to come. This portfolio is designed for subscribers with no equity holdings,

MARKETIMER FIXED-INCOME PORTFOLIO

Fund (Symbol)	Weighting	Current Yield	Duration	Average Maturity
Vanguard Ginnie Mae Fund (VFIIX)	40%	5.00%	4.4	6.6
Vanguard Short-Term Investment Grade (VFSTX)	35%	4.61%	2.0	3.0
Vanguard Inflation-Protected Securities (VIPSX)	10%	1.36%*	7.7	9.1
Vanguard High-Yield Corporate (VWEHX)	15%	8.96%	4.7	7.0

* plus inflation adjustments reflecting the CPI paid quarterly.

Our favorite money market funds are Vanguard Prime Money Market (VMMXX), currently yielding 2.17%, and for tax-exempt income, Vanguard Tax-Exempt Money Market (VMSXX), currently yielding 1.74%. Vanguard also has tax-exempt state specific funds for residents of CA, NJ, NY, OH and PA.

ACTIVE/PASSIVE

This portfolio invests for long-term growth objectives with broad diversification, low expenses and high tax-efficiency. The portfolio currently holds a 90% weighting in Vanguard Total Stock Market Index (VTSMX), and a 10% weighting in Vanguard International Growth (VWIGX). An alternate active/passive portfolio using exchange-traded-funds consists of a 90% weighting in VIPERS (VTI), and a 10% weighting in IShare MSCE EAFE Index (EFA).

INDIVIDUAL ISSUES - These issues are currently rated hold. On any weakness into the S&P 500 Index low-to-mid 1200's range, we rate SPY, VTI, IWV and DIA attractive for purchase.

MANAGED ACCOUNTS - While the **Marketimer**® **Investment Letter** provides monthly guidance, professional management is available from Genworth Financial Asset Management, a money management firm which invests in no-load funds with personalized programs to meet individual objectives. Minimum account size is \$100,000. For details call 800-252-2044.

MARKETIMER NO-LOAD MUTUAL FUND MODEL PORTFOLIOS

The *Marketimer* no-load model portfolios are designed to provide investors seeking aggressive, growth and balanced objectives with a strategic approach to investing in no-load funds over the long-term.

Model Portfolio I is designed for investors with *aggressive growth* investment objectives. Such investors seek maximum returns and are willing and able to accept high levels of risk and volatility. Current income is not a factor in this portfolio.

Model Portfolio II is designed for investors with *long-term growth* objectives. Such investors seek to enhance the value of capital over time and assume a reasonable level of diversified market risk. Current income is not an important factor.

Model Portfolio III is designed as a *balanced* portfolio for current investment income along with capital preservation and modest growth. The portfolio is allocated evenly between equities and fixed-income securities. This portfolio is best suited to investors nearing or already enjoying a retirement lifestyle.
